I am among the "silent majority" pleased to see the apology made to Mr. Fiber. His willingness to provide help and assistance on many occasions over a broad spectrum of questions, problems, products and configurations has benefited many of us.

We are fortunate that amateur radio equipment provides among the highest value to dollar ratio of all current day products and commodities. Being in an extremely competitive market with slim margins, the manufacturers' advertising, marketing, announcement and release dates of new products is undoubtedly very critical. No manufacturer wants rumors and half truths swirling around, diluting or damaging their marketing efforts.
Constraints upon employees regarding divulging advance information about new products is common in virtually any business. To hold a gentleman's feet to the fire for not revealing his employer's information in a newsgroup for the whole world to see is ridiculous enough. To then embark upon a character assassination of him over it is even worse.

These newsgroups are for the mutually beneficial exchange of information and ideas. For any of those so inclined to any additional personal attacks or silly agendas, I'd suggest another newsgroup, perhaps:

alt.support.rectal-cranial?

The FT-51 is the nicer rig, but more expensive. Why are you limiting your choices to these two radios? How about the ICOM W32A?

I also agree that an HT is not a good choice for a first rig. For no other reason than - HTs break under heavy mobile use (phone jacks for instance). Also you'll annoy the hell out of folks while you QRP the repeater.

No squelch adjustment problem on most older radios is caused by a bad squelch pot, but since yours goes out when the rig warms up you might have a cracked solder joint somewhere in the IF section. Find a connector (on one of the main boards) that squelch pot is attached to, and ohm it when the radio fails WHILE turning the pot. Make sure the unit is off!!! If you don't see any change you have a bad pot, they are still available from Icom. If not, the IF is to blame, it could even be the FET that actually mutes the audio.

Adnan, Icom service tech

13. 150 MHz FM receiver for POCSAG pager needed!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-01 00:00:00 UTC
From: ecn@bis.bg
Message-ID: <01BD2F66.EC074130@HOME>
Source record: 154791

Hi All,

My name is Evgeni Nikolov. Currently I'm working as an AS/400 programmer for Deloitte & Touche. In my free time I use to do some programming on PIC16F84 microcontroller (http://www.microchip.com/10/Datasheet/PICmicros/PIC16F8X/PIC16F84.htm) . Now I am working on a project witch combines PIC16 and a FM receiver. Together they can receive and decode POCSAG-coded paging messages from national service provider (in Bulgaria there are several). The digital part of the device is almost ready. But I have very litt
le experience with RF devices, so I need help very much.

The module I'm looking for is RF receiver and FM demodulator for 150.175 MHz. I prefer to be able to tune to different frequencies. The step is 20 kHz and deviation is 4 kHz. I2C protocol is preferable but any other is OK. I found many pager receiver chips, but they are rather complicated (have more than 10 coils) and don't have any tuning capability.

After some research I have found two chips from Phillips (TSA6057 and TEA6100 http://www-us.semiconductors.philips.com/cgi-bin/newsearch/pip?typenr=TSA6057&search=TSA6057 and http://www-us.semiconductors.philips.com/cgi-bin/newsearch/pip?typenr=TEA6100&search=TEA6100). But as far as I can understand they need extra elements and I don't know how to connect each other. So - that is. Help!

Of course after (if) I finish this project I will publish it in my web page ((http://www.bis.bg/~ecn) for free and everybody will have it.

Thanx in advance.

Evgeni

When I was trying to operate hf packet, serveral years ago, I found two things helped me. (1) tune in the signal so it sounds good (that you will get used to) (2) using most of todays tnc's, which have led tuning devices, adjust the indicator untill you get an even mark and space signal, eg both are about the same intensity and at each end of the scale.

> strongly urged you not to have only an HT for starters.

This previous piece of advice was an excellent one.

An HT, while certainly filling a valid purpose, is a poor first radio,
and an exceptionally poor mobile radio in most cases.

Many people try using HT's from inside the car on a rubber ducky. You
may be heard this way, but I suspect most people listening will tire
quickly of the usually scatchy and otherwise inconsistent signal quality
into all but the closest repeater. Even with an outside antenna, an HT
does not have a power output level sufficient to guarantee reliable
communications in the mobile environment. Bad choice.

The same generally holds for fixed station use -- the issue is power
out. You may hit your favorite repeater -- but you won't hit much.

A mobile (read that as 25-40 watt class) radio eliminates these
problems. It can be moved from the car to the house to the back yard on
a battery if you wish. No, you can't easily ham from the bus, or attach
it to a head mounted ducky and walk around your local hamfest. But how
often do you really want to do that anyway?

If you can buy both, the HT is a fine, casual/emergency use,
supplemental radio. If not, the HT should not be a priority.

One opinion -- FWIW, maybe something under 2 cents :-)

Gee, why would we need the RT software to reset it when it can be done on the rig itself? I've reset mine twice after fooling around with the ADMS stuff and it works great.

Hi Chuck,
This has happened to me a couple of times during the past few years. You
will have to "reset" the radio (Page 35 of the manual). Try the soft
reset first (to factory defaults). I forget exactly what I had to do.
Whatever, you will have to program all your memory channels again.

There is another option in some cases-a amplifier will allow satisfactory
base or mobile use in many cases.

>Is the Yaesu FT-757 GX in the same class as these rigs?
>--

Hi David,

I bought my 757GX many years ago and went through the same analysis
your buddy seems to be doing. In very many respoects the 757GX is in
the same 'class' as the TS-440 and IC-735. In fact those were the
three radios that made my final list. I chose the 757 primarily
because I do a lot (at least I did then) of rtty/amtor etc and the 757
has a 100% duty cycle defined as full power, key down for 30 minutes.
At least that's how I remember it. About the only thing I don't like
is the tuning increments. It can take forever to tune large segments
of the band but that is really more of a convenience than anything
else. I didn't lilke the front panel of the 735...the plastic cover
is too easily scratched (seeing IC-735 units at hamfests bears me out
on this). As I recall the 440 was somewhat more expensive than the
757 at the time although, as I said, the primary reason was the duty
cycle of the 757. I still have the owners manual. Is there something
I can look up for you/him?

Grant makes excellent points. I was not thinking of all the conditions that could occur given your possible environment. And certainly, a good antenna and power help overcome distance issues.

For my situation, I live in the midwest, relatively flat terrain, great repeater in town and in adjacent cities. I have a J-pole antenna on the roof, a mobile antenna on the car. With my FT-50, I work simplex anywhere in town and with the outside antenna, can work repeaters 30 miles away on the 5 watts. Mobile has never been an issue within 25 miles of a good repeater. Sig reports have been FB in these cases.

So, my situation is a more ideal case where a good antenna and low power get the job done.

Ditto on Grant's comments on the Rubber duck antenna, it is only good for short distance work, totally agree.

Bottom line, in my situation, and maybe yours, the HT is a good trade-off. If you have other conditions, then Grant is right on.

Good luck.

Hi all,
First, the ADMS software is only one of the ways to loose the squelch settings. Not holding the orange button long enough when you turn it on will do it too. I get so tired of seeing uninformed people putting down RT systems. Its NOT their bug. It IS yaesu's bug.
Second, I used the squelch reset procedure and it worked fine for my VX-1R.

I own a FT-8500. The radio doesn't suck, but its user interface does. If you limit yourself to just flipping among memory channels, it is acceptable. But if you do more than that, you'll keep the owner's manual *very* close at hand, and you won't be doing anything fancy while driving because this radio needs your undivided attention when doing anything remotely out of the ordinary.

I bought it to solve a particular mounting problem, and it does that, but I won't buy another. There has got to be a radio with a better user interface than this. (And indeed almost anything else is better, but making them fit a certain way is problematic.)

So, bottom line, the radio is Ok as far as receiving and transmitting are concerned, and if you don't frequently need to flip reverse or anything else other than step through memory channels, you can live with the user interface. But if you do, consider something (anything) else.

Since you asked..... the only improvement to the IC-706 MK II is to add 440 MHZ to it like the Yaesu FT-847. This is just my opinion and I have no information from ICOM about the next model. When I do, I will post the info for everyone to see. I found "WATERS and STANTON" in England to be a great source of info on his Web Page. I then make calls to my contacts in Japan to verify.

> There is another option in some cases-a amplifier will allow satisfactory
> base or mobile use in many cases.

And now the other shoe drops. An amplifier will allow the talkie to
perform like a mobile. While in the house you need a power supply for it

(which could power a mobile). And you get to move the amp and radio back and forth. Next, cost, a 50w mobile sells for less than $300(2M) a talkie less than $200 but add $100 for the amp and $75 for the power supply. Plus you need a dc cord for the car, $25, and a speaker mike so the talkie isn't flailed all over the place another $35-45. we are ignoring the antennas at both locations that both radios need.

Lets see, Less than $300 plus a power supply for the house, total $375.

vs $200 + $100 + $75 + $25 + $35 total $435 and that is with only 1 battery(original) and a wall wart(slow charger). everybody has to have a spare battery $75 plus a fast charger $75.

Is it starting to soak in that a talkie is a poor and EXPENSIVE first radio.

>

I have owned an FT-8500 for some time. Overall, it is as good or better than most dual band mobile rigs. It has many useful features, but if you don't have the FC-10 "potato head" controller, it can be a hassle to use most of them, as Gary has pointed out. With the right controller, it is a piece of cake to perform most any function without ever having to look at the radio. The FC-10 puts every function right in your hand, and after a short while you don't even need to look at the mike, you just do it by "feel".

However, managing the memory banks is best done by the optional computer control software. You can do it from the FC-10, but it's much faster and you have better overall control of the programming via software.

50. FS. watt meter/rtty decoder

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-01 00:00:00 UTC
From: Lee / AB7ON <revcon78@hotmail.com>
Message-ID: <34D4F840.38AA@hotmail.com>
Source record: 154860

The following items are for sale.

Daiwa NS-660 watt meter and SWR Bridge. Late model unit has ranges, 3-30, 30-300, and 300-3000 watts in the HF range unit accurate to 40 MHZ. This meter is new never used and still has original box and warantee card. Unit has remote reading capabilities and has dual meters readout so you can read swr and power at the same glance. Unit has grey cabinet with white meter face. a great buy at $110.00 and I will pay shipping to lower 48 states.

HAL RTTY decoder for sale, this is a older unit that is used but in good shape. model number is ST-6... asking $75.00 plus shipping or will trade for hand held two meter rig....present me with offer and describtion of what you have.

Also have CW key, surplus J-44 straight key....price is $45.00 I will ship at my cost to lower 48.

Thanks,
Lee / AB7ON

Richard;

The FT757 GX is the small transceiver marketed before the FT890 and now
the FT900. The FT757 GX is a good rig for moblie or home use. The
receiver is not quite that same as the FT890 but is still a good deal.

Price range is most likely in the 500 to 600 dollars. Yes the 757 is similar to the TS440. The 757 does not have a built-in antenna tuner like the TS450SAT. A co-worker of mine has the FT757GXII installed on his sail boat and can work the world. Good luck in your friends quest.

> the rig itself?

It is not possible to reset it with the RT software, he just ment that
RT Systems have provided some settings ... of course it must be done
manually.

> I've reset mine twice after fooling around with the ADMS
> stuff and it works great.
>
> Bill, WK6A

Yes yes , it "works great", but it is under "reasonable douth"
that it will meet the advertised specifications now.

Just take a look at the RT Systems web and read this very carefull:

... snip ...
> This malfunction is easily corrected by reseting the Squelch settings
> of the radio to factory settings. These factory settings should work
> for most radios. If the squelch of the VX-1 is functioning as it should,
> DO NOT perform the reset.
... snip ...

Yes, yes , for most radios, hmmmm, but still a good advice "DO NOT ..."

If you ask around people to tell you their settings, you will notice
that NOT ONE have thouse FACTORY settings, it is a very small chance
that thouse settings are Optimized for your VX1R.

Sorry disapointing you, If you have not written your ORIGINAL
settings down before the messup, well, bad luck.

There is no way to correct that , I guess that if you send your
VX1R back to you dealer, he will only make the SQ Reset
Procedure :(, and maybe change some settings a little bit
so it looks like .... :)

Greetings, ...

> RT systems. Its NOT their bug. It IS yaesu's bug.

Right 100%, it is a bug in the VX1R firmware. I never menshioned
RT Systems in this matter. No one is putting them down or theyre
Software, after all they are doing a great job and with the release
of theyre SQ reset settings they only try to help.

I thing the only mistake is that YAESU have not menshioned
these settings in the manual. They should have warned us,
that it is possible that under certain cercumstances the
VX1 can lose these settings, so everybody could write them
down on time.

> Second, I used the squelch reset procedure and it worked fine for my
> VX-1R.
>
> Jim

You can also change some capacitor +- 50% or some resistor,
it will "work fine" again.

"worked fine" is a very wide term, as I said: if you have not
written down YOUR original settings, bad luck.

But if you thing your VX1R is "working fine" now and you are
happy, then enjoy.

I have an ICOM 2m mobile rig, IC-28H, that's developed a problem with
the squelch. After the rig has warmed up the muting of audio under
squelch fails, the green T/R light acts normally. If I turn
the rig off for a few minutes, then back on it works OK but
only for a couple mins. Any ideas? CPU reset was no help.

Thanks!

I have never owned a 757, but have owned the 890 (nice little radio).
I also have owned two TS 440S/AT's. I find the 440 in a different
"class" in the sense that you can put substantially more filtering
in line for heavy QRM work. I believe the 735 allows the same. For
example, the 440 comes stock with simple ceramic filter for the 455 kHz
IF. The 890 comes with the same quality ceramic filter for its 8.9 MHz
IF. Here is where the 440 allows more: you can cascade filters in the
8.8 MHz IF with that stock filter in the 455 kHz IF. You can get two
filters in line at the same time, more stop band attenuation and better
skirts. The 890 only allows one single filter in the main IF line
and while you can go buy an optional crystal or mechanical version (which
is pretty good), you cannot cascade additional filtering for the better
skirts and stuff.

The other difference is that the TS 440S/AT is very, very convenient
with the AT on board. It works very well.

Overall, if you are going to use the rig for simple SSB communication
and don't expect to deal with major QRM, the differences are small.
Best of luck, you won't go wrong with any of these radios.

Source record: 154873

I bought this unit new in 1979 and used it extensively for a year, then packed it away. Here are the specs:

80 watts output (on 5-15 watts input)
144-148 MHz
FM, SSB, and CW
10 dB receive preamp
Requires 13.6 VDC at 10-12 amps (great for a mobile)
5-3/8 inch x 3 inch x 8 inch
3-lb weight

It is in "as new" condition, but electically and cosmetically. I have the original "owners manual" (four pages of typewritten paper and a schematic).

Best offer. I'm in the Seattle area. Please email if interested.

- Mark (markjenn@halcyon.com)

64. FS: TS520S, Heath SB200 Amp (Seattle area)

Message-ID: <6b35ihsvr1@brokaw.wa.com>
Source record: 154874

After not being active on the HF bands for over ten years, it is probably time to sell my HF rig:

Kenwood TS520S HF Transceiver (tube final)
Original factory shipping carton, owner's manual, and parts/service manual
Kenwood MC-50 Microphone
Factory Speaker (forget number)
Heathkit SB200 1KW HF Amplifier
Owners/Assembly Manual

Both units are in excellent condition, work perfectly, and look great cosmetically (no scratches or dings).

Best offer. Please email directly to me. I'm in the Seattle area. Thx,

- Mark (markjenn@halcyon.com)

I have a Precision 10-12 (in good working order) and a 10-15 needing repair/calibration.

I am seeking to swap for supplementary tube spec manuals (like the Hickoks have) for old tubes, foreign tubes and new tubes. Would also like to find a service manual that provides calibration and repair info.

I have copies of manuals of various sorts to swap that may prove useful to anyone who has TV-7's, some Hickoks, etc. Also have a copy of a 1937 RCA tube manual, etc.

If anyone is out there who has the above, let's talk.

Thankyou,

Remove the second, anti-spamming N from the end of
tdragon in my address to respond,
tdragonn@blarg.net

I have the following items for sale or for trade.
I'm interested in HT equipment, mics, batteries, etc. I'm
also interested in radio scanners. Anyone got a Pro-42? I'd
perfer to sell this stuff for cash. Make me an offer on
what I have.
```

• 99 call Caller ID box. Shows time, date, caller's name, and caller's number all simultaneously. And, when not in use, shows current time and date. Comes in origional box and with batteries.
• Two 14.4 external fax modems. Both are in working condition and come with the needed powersupply. One is a USRobotics Courier with manual, and the other is a Motorola Fastalk without the manual.
• Red security telephones. These are the wall hanging phones used in airports and larger hotels. they have no means of dialing out, but are otherwise fully functional. they'd be great for use in the garage so you don't have to run through the house to answer a call, or in the kids room. I have two of them.
• Fone Flasher 2. This is RS's origional. Has a strobe light that flashes when the phone rings, and a built in ringer. You can have one of the two, or both simultaneously when the phone rings. Great out in the shack for when you don't want to be disturbed by additional sounds.
• Composite computer monitor. This is a left over from the days of the apple IIc computer. It's monochrome green and has no internal speaker. It would be great for an on-site display for video work, amateur video applications, and for video editing.
• 12v 2Ah Sealed Lead Battery. GE Part number 1CVA156.
• Helium neon laser tube and power supply. 1 milliwatt output. mostly a fun little toy, great for parties.
• Compaq 286/LTE laptop. Backlight display, 1.44meg floppy drive, internal 2400 modem, modified to run off of ni-cad C batteries instead of proprietary battery pack, and fully MS-DOS 6.22 compatible. Batteries not included.
• 82mb 3.5" IDE Hard Drives. Tested and none have bad spots. I have two Maxtor, and one Western Digital.

• 125mb 3.5" IDE Maxtor Hard Drive. Tested and has no bad spots. These hard drives would be great for adding space to an existing system, or keeping the kids' homework and games on a separate drive.
• As a side-note, yes, everything works.

Source record: 154895

Hello all,

I am wondering... how difficult is it to self install the new DSP for the MKII? Has anyone done it them selves? On the bottom of the information on the UT-106 DSP is says that ICOM strongly recommends that an authorised dealer install the DSP unit...but on the web page is also says that it is easy to install and requires no soldering...? What is the "real" deal??? I would rather not have to submit my 706MkII to days off bouncing around with UPS if I could help it...

What are your thoughts people??

From: 1 Games <neltang@hotmail.com>
Message-ID: <01bd2ef6$06365b20$5d0148ca@default>
Source record: 154897

Anybody hv this experience that after changing of soft-mod (i.e. Simultaneously press the 2 Volume keys and the Call buttons while powering on and change one of the article such as MOD L ... etc), the handheld cannot receive any signal in the band which you hv modified (i.e. if you stand in the VHF band and do above mod) but you still hv transmission in the TX side.

My HT default as flw:

Band 7
IF NO 0
S FULL B0
S 1 3E
SQL TH73
SQD TI5C
MOD L 26
MOD H 27

But I know that some body hv difference setting:

Band 1
IF NO 0
S FULL 84 <-----
S 1 19 <----
SQL TH64 <----
SQL TI4E <----
MOD L 25 <----
MOD H 27

Thus, How can I change it especially I cannot change for S FULL B0, S 1 3E, SQL TH73, SQL TI5C to other setting.

Anybody can help me to make my HT resume normal. Thanks a lot

So far as I know no one has the DSP add-in yet; Icom America web site says April availability.

My guess is that if you are comfortable installing an optional crystal filter or a CTCSS board, you will be able to do this yourself. I know I will do it myself (but then I build qrp kits, which has to be a bit more challenging).

I think the "authorized dealer" recommendation is standard prose to cover themselves in case of trouble.

Phil

The price is $130 at HRO (Ham Radio Outlet). However it is free with
a new IC-706 Mk II purchased from Feb 1st till ?.
I think you have to send in a coupon etc and Icom will send the Sep
cable and DSP to your house. I suspect you may have to wait a month
or so since there will be great demand. I think it is a great deal
and you all know how demanding I am! The only feature the DSP doesn't
have is the "BRICK WALL" filters. You have to rely on the optional
crystal filters to make the passband more narrow. Still, for $130 not
to shabby and Free to the new purchasers of the Ic-706 Mk II.

I've seen prices stated all the way from $98 to $199, with the former from a yen conversion based on price in Japan and the latter likely list.

Anywhere in that price range, it's got to be worth having.

The nominal availability date is April. But we may hear from people with it in NEW 706MkII's much sooner. Since ICOM has announced (I'm told) that it will be free in new radios, no one will now buy one new without it. So, if they have made this announcement, the radios with DSP must be available for sale now -- or they will have a sudden drop in sales, until it is available.

Phil

I have seen the IC-706 Mk II guts in detail as I was doing the wideband
TX. On the bottom of the radio you will see a simple white connector on
the PCB board. There is another connector somewhere else that you have
to connect a thin ribbon cable. I think it is simple (no soldering etc).
Icom says you may want a Dealer to do it to cover their ass from people
who don't know what they are doing. I am a Field Engineer and you would
be shocked at what I have seen. Perhaps I will write a book someday. I
bet 99% of peple will have zero problem.

I am preparing for my first radio purchase. From a perspective of someone who is trying to learn, but is also fairly technical, which radio do I buy first? There are so many to choose from!

If I had to choose between a Yaesu HT 50 or a 51, which would be better?

Any help would be appreciated. I really want to get on the air.

This is what the internet is for. Go to the Icom home page. Find their list of dealers.
Most have a web site. Send each one email asking their price including shipping.

I did this about 2 months ago and found that Juns and R&L had the best prices at that time. My local HRO met the price when I showed them my email responses. That saved me the shipping...

...love this radio...

Message-ID: <19980201155501.KAA16605@ladder03.news.aol.com>
Source record: 154912

I understand this whole thing started when someone posted a
"COLLINS R-390 FOR SALE" on a smut newsgroup.

>look again at the software. It is not a problem in my experience, and
>it makes the radio much more convenient to program and use.

No, AFAIK, the ADMS software does *not* provide "a way to reset the
squelch to proper factory settings".

Once you have ruined the settings, you need test gear and the service
manual to put back the *proper* settings. R-T Systems have provided
some settings which should get the radio going again but they may not be
the exact settings for your particular handie.

If you are going to play around with ADMS on your VX1, you would be
adviced to go through the settings on your handie first and note thm
down on a sheet of paper. Then if the software buggers your handie's
settings, you can put back the *original* settings.

103. Hardcover Handbook

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-01 00:00:00 UTC
From: rcrusoe@aol.com
Message-ID: <19980201160600.LAA06539@ladder02.news.aol.com>
Source record: 154915

For a couple of years after I got into amateur radio, the Handbook was in Hardcover. I would like to see a hardcover edition every 3 or 4 years I think, even if the cost was a bit more. The soft cover leaves something to be desired when it comes to durability, and the information will still be of value 20 or 30 years from now, so durability seems to me to be an issue.

Most of what little I know about tube circuitry is from a copy of the '65 edition given to me a few years ago. It is falling apart, and I really wish it was a properly bound hardcover edition, because it is interesting from a historical standpoint and older technology is presented in enough detail to duplicate. New hams in 2030 will probably be saying the same thing about old-fashioned discrete transistor circuits.

The handbook would be an excellent archive for the generations to come if properly bound to last. CDRom is great, but who is to say that the format will or won't go the way of the 8-track tape or the Edison Talking Machine cylinder 20 years from now? A book can always be "manually read".

I don't see a need to have a hardcover edition every year, as there is relatively little new information from one year to the next, so evry 3rd or 4th year should be sufficient for a decent archive collection.

Anybody with me on this? I would like to see an informal straw poll before going to the editorial staff with it.

No Yves, Steve Hershman is the idiot. Gary Fibre is employed but Icom America as, I believe, head of the service department. If he quotes a price it certainly represents MSRP as set by his employer.

Double 0 Hershman is an egocentric little schmuck who reads the Japaneese home pages for the various manufacturers then reveals his findings as the results of "interogations of various individuals."

The results of Hershman's harassment of Gary may well be that we loose a valuable source of technical information on Icom products. If you would like a little more insight into Mr. Hershman's character, check his postings in Dejanews, look particularly at the ones from the alt.sex.prostitution newsgroup.

I know Gary - have met him personally. I both like him and appreciate his competence. There are "less than knowledgable" employees at Icom, but Gary more than cancels out the bad taste they leave.

However, on the subject of issuing denials of new products, it is one thing to deny something when someone gets in your face and asks a direct question. It's another to pop into a conversation and issue an unsolicited denial.

I propose that Gary avoid doing the latter, especially if the rumor MIGHT be true, to avoid loss of credibility.

Shaun,

Congrats on getting ur license. I don't understand why the previous comment so strongly urged you not to have only an HT for starters.

I have an FT-50RD and use it for mobile, base, and 1200 baud packet ops. Never a problem in over a year. Regarding the 50 versus the 51, I can't really comment. You'll have to watch for other responses.

Also, think about HF ops. They can be fun. Used radios abound and with a patient shopping attitude, you can find a used Heathkit for about $150.

Good Luck.

Once again.. I think I may have jumped all over Gary and Apologize to
him and the Newsgroup. I felt funny being in the same position as Gary
with a customer asking me about a product that was under developement to
be releases in 8 months and not being able to confirm or deney it. If I
said anything about the product and it got back to my company I would be
ina lot of trouble. I personally perfer not to be told about new models
until a month or two when they are unveiled to the General Public. That
way I am telling the truth to the customers when I say:" I am not aware

of any new models coming out to replace the current one."
I hope Gary accepts my apology and continues helping out the people on the Newgroups.
Sincerely, NS1R Steve Hershman

From: jpoulin@honk.org
Message-ID: <886479026.301531150@dejanews.com>
Source record: 154681

I have a question concerning an FT900.

Is anyone having problems with their noiseblanker when using
frequencies above 21 MHz?

It seems that the NB does pretty much nothing on the higher freqs. When
the radio is using 20,40,80,160 is works fine. Has anyone noticed this ?
... If so, is there a remedy for this ?

Also, I noticed that there is continuity on the ANT connection on the
back.

Is this normal ?

This is a fine working and decent looking rig. A few small flaws on the top keep it from being SUPER nice but its and 8.5 anyway. Works just like new, has both added CW and SSB filter, full output on the finals and an MC 50 mic that gives it that "Kenwood Audio" sound!! Will ship and insure it to your door for $475 bux and youll have a great radio without paying and extra 150 bux for the add ons. Trade up but probably not down! These radios work and sound and recieve fantastic. Thanks Murray

This is a Dentron DTR 2000L uses an 8877 tube for about 2300 to 2400 watts out. Could be raised with new transformer if thats not enough. hi hi. Amp face in excellent shape case is too, in side some goo but not to bad!! Its been around but its here to stay.+ I will sell this beast for $1200, and we will talk about shipping it at your expense. It s a desk top but heavy. Trades considered, need newer radidios! Dont need any boat anchors etc. Thanks Murray Neece Odessa, Texas

A CADILLAC ! 3 @ 3-500Zs, no tune, 160-10, in great shape inside and out, just checked and allingned at Omega! In excess of 2000 watts out, in a 2 piece amp with peter dahl transformer in one and A super smooth nice RF deck in the other. Why worry about new tubes> use the easily available 3-500 AND still have plenty of power. It will ship, but it will cost a bit! Probably 50 bux or so to ship and my price is $1750.oo fob Odessa, Texas. They are hard to find, and if you always wanted one, here it is. Gauranteed!! IF my Alpha sell first, Im keepin it, if it sells first, Im keepin my Alpha 374 A+1 Cant keep em both. Thanks Murray RR

I have a Pro 43 for sale.
It is in good condition and has the cell band mod.
Includes the factory service manual, a case that is too big, (it's the case
for the HTX-202) and a telescoping antenna, along with the original antenna.

Actually, sine it says "collector site", maybe they do mean Twoer,
as in a Heathkit TWOER 2 meter radio..

Just saw your post. I'm building one and testing it as I go along. Nice kit, good manual and so far no problems. I am about half through it and have about 10 hours or so in the project, and I'm slow. I fired up the rx portion of the transverter over the weekend and it aligned fb using an R4C as the 14mhz IF and a URM25D signal generator. Noise source such as a diode noise generator would probably be better. A frequency counter is a plus although not essential.

It'll be on the air in a few weeks. I just don't have much time to spend on it. But it is interesting.

I have a Motorola CB Radio (Model CM550) with Sams CB Radio Service Data Book (CB-292). This is a base unit 40 channel AM rig with built in clock/alarm, Mic Gain, Volume, Squelch, RF Gain, PA, ANL, and Mute buttons. The unit is in excellent working condition and looks great!

This is a great collector's piece too! The best offer will be accepted. Then I'll ship COD/insured via UPS.

Thanks for reading this post.

Sincerely,
Chris

The new KB8UYZ Amateur Radio FTP Server is now online! We have thousands of files online, including radio mods, frequencies, satellite tracking
software, logging programs, morse code programs, and much more! We also plan on updating the archive at least once a week, so visit again for new files!

If you have any files to contribute to our archive, let us know about them. We will then send you instructions on how, and where, you can upload the files.

The FTP Server can be accessed via the following ways:

WWW: http://megaman.dhcom.com/hamradio
FTP: ftp://megaman.dhcom.com/hamradio

In time, we expect to have an index for each directory on the server, to help you better find files that you need.

135. REVIEW: QSTView - QST Magazine on CD-RO, ARRL, 1997

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-02 00:00:00 UTC
From: mc@shore.net
Message-ID: <6b4rmi$4mm@northshore.shore.net>
Source record: 154734
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

REVIEW: QST VIEW - QST on CD-ROM, American Radio Relay League

For many years the American Radio Relay League, aka the ARRL, has shown little interest in my favorite equipment - tube-based radio communication gear. A few years ago a couple of articles were published in QST about the resurgence in interest in this subset of the hobby. It must have resulted in much favorable comment from readers and members because the League has apparently taken notice of we who love the vintage stuff and our interests.

Recently the ARRL began to release some of their documentary material including QST on CD-ROM. For those of you who are not familiar with this, Compact Discs hold 650 Megabytes of information or 74 minutes of audio. Most records are now released on CD. They are digital of course and are read by an optical reader connected to your sound system for audio and play just like a vinyl record except there's no wear and tear on the disc. Just about all computers sold these days have a CD drive to read data stored on CDs and almost all software comes on this media. The ROM means Read-Only Memory but this is somewhat of a misnomer because in reality its Read-Only Storage. So essentially the CD is a storage device that holds a LOT of stuff - the average page of text requires 2 Kilobytes of storage space so do the math and figure out how many pages can be stored on a 650 Megabyte CD. The current Handbook is available on CD as well as the Callbook which is no longer available in paper form. There is also a trip planning program that will also include and highlight the VHF/UHF repeaters along the route.

Back to the League and its QST CD project. Recently they began to offer the back issues of QST on CD working backwards from the 1990s. We are the main beneficiaries of their quest to eventually have all issues of QST available on CD-ROM. It's a fine way for the League to recognize the incredible interest in the older equipment we all love so much. I am very pleased to see that QST is now available from 1940 to 1996 in the following libraries:

1940 - 1949

1950 - 1959

1960 - 1964

1965 - 1969

The rest of the collection is sold in five year increments to 1994 inclusive. 1995 and 1996 are available by the year as part of a compilation of the three ARRL periodicals; the other two being QEX for experimenters and NCJ for contesters. Price is $39.95 for each library. The annual periodical 1995

and 1996 compilations are $19.95 each. (plus $4.00 shipping). The ARRL's toll-free order line and Web site are listed further down the page.

I took a good look at the 1950-59, 1960-64 and 1965-69 libraries and here's what I found.

Virtually every page containing articles, columns, ads and covers have been included in the collection, even the classified "Ham Ads". Each library comes with a program called QST View that manages the indexing and data. When installed QST View builds its own index database. Should you add an additional library set later you will be given the option of reinstalling everything or just updating the index database. This installation can take anywhere from five minutes on a Pentium 90 to 30 minutes on a 386. Your computer must be running Windows (3.x or 95) to be able to use QST View.

Once installed and the index constructed you can search for information by article, column, author's name/call, year or month or just browse issue by issue. The search query form will support the use of some DOS "wildcards such as *, <, >, etc. QST View has two windows - the Index and the Document Viewing Window. Once you have located an article you can close the Index window and the Document Viewing window takes the whole screen. You can also fit the image to the viewing window, pan and scroll the article, even print it out if you wish.

As far as content is concerned I found that the libraries I examined are full of information on tube-based equipment and I imagine that the libraries into the mid-1970s will be as well. I hope to take a close look at the 1970 to 1974 library shortly to see if this collection fits into our area of interest as well as the earlier libraries as they are made available. In short I found QST View and its' associated libraries a very useful reference source especially the earlier issues. The rich history and lore of Amateur Radio was well chronicled in the pages of QST which is the official journal of the ARRL as well as a technical publication and makes for very interesting reading. I am especially looking forward to seeing the libraries from the 1920s, 1930s and 1940 and hope that the ARRL will see a good enough response to the earlier libraries it now has available to encourage them sufficiently to produce the earlier QSTs on CD as soon as possible.

For more information you can contact the ARRL either by phone at 1-888-277-5289 or via the Web at www.arrl.org/catalog

Also known as a Heathkit Lunch box.......They had a 10, 6, and 2 meter version.

The 10 meter version was my first mobile back in the early sixties when I was 14. I had one mounted to the handlebars of my bike with a car battery mounted on the back of the bike. The radio fed a 98 inch whip attached to the rear wheel axle.....

Hi all, I have an IC900 with the 2 meter hi power, the 220, and the 440 modules for sale. It has the remote mounting with the optical cable and everything so you can stack up to 6 modules in your trunk and mount the display on you sun visor. It also has the optional tone unit and the manual. I'll throw in a speaker. It works fine. The buttons on the console look a little used but everything else looks new. I would like to have $790 plus shipping to the lower 48. Or make me an offer. The worst I'll do is laugh. ;-)

Thanks for your interest,
Jim McGhee N5FZT

141. A word of caution about DENVER RADIO

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-02 00:00:00 UTC
From: onines@aol.com
Message-ID: <19980202180401.NAA07752@ladder02.news.aol.com>
Source record: 154740

Ordered some radios from DENVER RADIO this last week off their internet site. Received a polite e-mail a few days later from a Tom Youngberg of that store explaining to me that the price list quoted on the web was incorrect, they wanted to charge $40 more per radio (almost 17% increase). The explanation offered was that the posted price was several months old and the service provider is slow in updating the site.
This warning is not an attempt to whine or snivel, I'm a big boy and can get over it. It is, however, important for others to know so you don't waste your time ordering something from this firm that they will not honor. Steve (AC6FR)

I also am thinking of the 900CAT (waiting to see the new 2, 440, 6 & hf first).

Do you give up much for the mobil ability. That is - what does a regular base have that the 900CAT does not? Being a smaller radio can it tolerate extended use? Does it overheat?

Thanks

Consider those who only have email access to the group. Pointing them to one of Rod's web pages is useless to them. Giving a succinct answer is not. I suppose seeing Rod answer questions day after day with only a pointer to his web pages finally set me off. What I'd consider a good answer would be to briefly address the substance of the question, then, if appropriate, point to a web page where more information might be found by those with browser access.

Now it is true that Rod has a wealth of information on his pages, but the way he answers questions appears to be just an advertisement for those pages, apparently intended to run up his hit count. At least that's the way it comes across even though that probably isn't his intent. I'd like to see him actually type in some original content to his posts from time to time rather than always acting like an autoresponder message from a spammer.

Note, I'm not calling Rod a spammer, it is only that his replies appear to resemble some of the stuff propagated by spammers trying to lure you to their web sites. I'm sure Rod is a good guy just trying to help. Blah Blah Blah But it doesn't *look* that way to someone on his fifth cup of coffee and already in a bad mood.

Unless I'm missing something, you're transmitting FM and he's receiving AM. It works because of "slope detection"; as your FM signal deviates in and out of the receiver's passband it yields a somewhat amplitude modulated signal in the receiver's IF. However, trying to do it this way severely limits the range, quality and usefulness of the setup. You really need an AM transmitter.

> --

Well, obviously this subject brings out some strong opinions.
I'm sure Clif's choice in a radio suits his operating needs,
but my own needs and experiences are quite different.

I operate from home, car and on foot using an HT, and for me,
that's the best low-cost solution. I spent $150 on a radio
(HTX-202 - not sexy, but works fine), put a home-built 8-el yagi
on my house and a 5/8-wave vert on my car. Power supply in
my home (when needed) cost me about $30. I can hit several
repeaters full quieting with just the rubber duck, and more
than 25 with the yagi, most at full quieting. No amp. I have
a $20 speaker-mike and a $15 1/2 wave telescopic ant (rarely
used). Total is $225 - much less than your average mobile rig.
(like you, Clif, I didn't count the fixed antennas)

With an HT, I can operate from either of my cars, from anywhere
in my home or neighborhood, from hotel rooms (I travel a fair
amount). Any car I happen to be riding in can be a base of
operations (I have a home-built 1/4 wave magmount if it's ever
needed). I can operate while hiking or boating or skiing or
biking (my kids are also licensed and have an HTX). I can hit
several local repeaters handheld from my office, or climb the
stairs to the top of the building to get a few more. Can't do

that with a mobile. Heck, I've even worked from up in trees.

Granted, the loose HT in the car is a hassle. I've not found the perfect way to mount it, but the cup holder works fairly well. I dunno, Clif - your argument just doesn't work for me. I think an HT is a cheap, versatile way to get into VHF work, and the mobile should be the second choice. Depends on what you want to be able to do, I s'pose.

>allow 5 MHz steps on UHF on this radio?

It's probably not changeable. Things like minimum tuning step size
are a function of the particular way the digital division ratios are
set up in the PLL that controls the VCO. It's quite possible that the
UHF VCO has an extra divide-by-two stage that the VHF VCO does not,
and that would make the step size twice as large.

For example, the FT-51 handheld will receive VHF on the UHF "side" of
the radio, using the UHF PLL and an extra divider. It works, but some
step sizes are not available.

Re: Gary and Dan's posts...

I have an FT8500 with the "potato head" mike. While I believe it could have been made less gimicky and more straightforward to operate, it does succeed reasonably well at giving you "no look", one button fingertip control of scanning, memory selection (of course you need to check the display for feedback), band selection, transmit band selection, and reverse. There is a learning curve associated with this mike, so make sure you're geeky enough to appreciate it :-).

It's not perfect. I think they tried too hard to be clever, in some cases. The menu system is reasonable, but I wouldn't call it great. It sort of equalizes everything: there's nothing particularly easy or particularly hard to access. Case in point: DTMF auto-dial. I can't leave this set, because it's too hard to change it while driving. So, in case I have to dial a number not in memory, I must leave the radio in non-autodial mode. Too bad no one thought of using the ENT key or something to temporarily put it in autodial mode.

Intermod resistance is good. I very, very rarely hear any squawks on the radio, even in high-intermod areas.

The radio has lots of features and is wire remote controllable (from a PC for example). It does not have one-way repeat or radio remote control capability or DCS, but seems to have most other features.

I suspect it was a bit far out for most people, as the later Yaesu models have not followed its lead.

I have no regrets whatsoever buying it. I have not had a bit of trouble with it in 2 years. If it matches your user profile, it will work well for you.

(AC6FR)

I have heard of this from other firms as well, and so I think it is imperative that prices be verified by e-mail or voice before actually placing an order.

Usually there is a disclaimer that they are not responsible for typos, or that prices are subject to change.

In fairness, it is indeed pretty tough to keep everything up-to-date on a really massive website. Still, a company that wants MY business will make a pretty good effort, and maybe even honor a price that is not current. A strong case can be made that a company that cannot keep prices up-to-date and will not honor prices advertised on a web page, really ought to think about whether they want a web page at all.

Personally, I am more likely to order from a firm when I see their prices advertised for what I want. I am equally likely to not order when I am told that the price has gone up since press time or post date. And I am CERTAIN to verify price by e-mail or phone. But that's just me.

Guess I'm beating this to death, but I wouldn't be so dogmatic about it. If your primary purpose is to take it hiking, bike riding, skiing, keeping in contact with the wife/husband or kids, or any "personal mobile" use, then obviously a mobile is not a choice at all, unless you can afford to buy two radios.

An HT can be made to work reasonably well in a car. At the bare minimum you need a good cartop antenna and a 5 watt power adapter. Rubber-duck inside the car really doesn't work unless you have a high up, close by repeater.

I completely agree that a mobile is a much, much better choice for car use, though. HT disadvantages for car use include: too many wires to mess with, wear and tear on connectors from repeated connections/disconnections, low output power, higher "intermod" (this can really be a problem), low audio, spilling things on it, no place to put it, need a remote mic, etc. Once you get a mobile for your car, you'll realize what you've been missing.

That said, I lived just fine for two years going HT car-mobile with a (bought used) 50 watt amplifier. I wouldn't want to go back to that, though...

Bottom line: how are you going to use it? How much money do you want to spend?

I don't understand...aircraft radios transmit AM. I very much doubt
that the FT50 transmits AM under any circumstances. You could probably
detune the AM receiver slightly to detect the FM signal, sort of.
Obviously, an iffy proposition...

>
> 73's de Eric KB9QAI No.Spam@add-inc.com

I have an ICOM 706 Mark II with an AT-180 Auto Tuner, and I have recently been pondering the exact same filter question. Just to make the issue even more interesting, it turns out the 706 Mark II already has two stock narrow(er) filters installed, one usable on SSB and one usable on CW. That information is in the user manual. But, like Eric, I haven't yet figured out what the default (not narrowed) pass bands are for CW and SSB. Anyone?

I assume we would want the narrowest CW filter we can get to screen out the most noise (QRM and QRN). For the ICOM 706 Classic and Mark II the 250 Hz filter is the narrowest available for the 706 Mark II. Likewise, I assume the 1.9 kHz SSB filter would be the most desirable, again on the theory that when conditions are bad (QRM, QRN) we would want to knock out as much of the SSB passband as possible to reduce noise while still retaining intelligibility.

I suspect the ICOM 706 Mark II with the optional 250 Hz CW filter, the optional 1.9 kHz SSB filter, and the new optional internal DSP might be a very nice mobile unit indeed. It would have all the noise reduction features directly controllable from the detached front panel and all fit into once small box without a rat's nest of cables running all over the passenger compartment.

Press and hold VOL+FW+MONITOR at powering on.

Go throu the settings with the UP and DOWN buttons.

Notice that there are 2 values for each setting.
One for Bands 0-4 and one for 5-8, change the
Band with the BAND button.

You will have 2*7 = 14 Nummbers to write down.

You can chnage (restore) them with the dial button.

Save with the F button (hold 1 second)

This is this the description from the websight.

High Gain 800 MHz Portable Antenna

Receive better clarity in the 800 MHz range!
ANT 22 The Max Systems antenna will make a tremendous improvement in the 806-960 MHz reception over the whip provided with your hand-held or desktop scanner! (Not usable in other frequency ranges.)

ANyones used this?

Can you hook up 2 antennas at one time, like this one plus one with full range coverage?

170. Can you hook up 2 scanner antennas at one time?

177. Re: yaesu ft-50 and aircraft-band txing

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-02 00:00:00 UTC
From: Tom Gasta <tomgasta@worldnet.att.net>
Message-ID: <6b5t96$eds@bgtnsc03.worldnet.att.net>
Source record: 154776

The Yaesu techs are not wrong. It would take an entire second modulator system in order to transmit AM. They DO NOT transmit AM period. Some AM radios can detect the FM audio, a little slope detection may go a long way, but more often than not, the audio will be unrecognizable. I have a VX1 and it is the same thing.

Kelly Johnson wrote:

From: Elena Nesvetaeva <lenka1@worldnet.att.net>
Message-ID: <6b5uit$pav@bgtnsc03.worldnet.att.net>
Source record: 154778

Folks,

Does anyone have any experience with ham radio ("radiolyubitel'stvo") in Russia?

How does one go about getting a license? If you can give me phone numbers or addresses of related organizations in St. Petersburg, Russia, it would be especially helpful.

What is the approximate price of equipment in Russia for voice communications with the outside world (and what equipment is needed)?

Thanks,

Elena

180. Standard C558A CTCSS

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-02 00:00:00 UTC

Message-ID: <6b32r6$4dr@mercury.galstar.com>
Source record: 154797

If its not one thing its another...
I have a dualband HT, Standard C558A, which I bought used recently.
It works great using repeaters with no PL, but it seems to act
as if there is no CTCSS capability. How can I check that the CTCSS
unit (CTN160) is installed (preferably without opening the case) as
stated by the seller? It does have the 100 channel memory
unit (CMU161). I have set Mute=off (tried with On also, the
manual contradicts itself on that one).

From: lee810@aol.com
Message-ID: <19980202030400.WAA20200@ladder02.news.aol.com>
Source record: 154804

I found a thread on this subject on DejaNews and thought it was worth resurrecting. The question was whether or not it would be possible to transmit on the airband (118-135Mhz) with a modified FT50. Most of the responses were quite negative.

Well, I've thought about it...and I've tested it. I am a ham/pilot and I feel there would be nothing more useful in the cockpit for emergencies than a radio that could transmit and receive on Ham, CAP, and Airband frequencies. Ideally, it would be a radio I'm familiar with, and with batteries in a known good condition (i.e. one that I use regularly).

You can do the freeband mod with the AMDS software and a hex editor on the FT50, no soldering required. I've tested the air band frequency and got a 'loud and clear' from an aircraft 5 miles away. (This was not with the rubber duck, but with a dipole antenna cut for the airband frequency range.)

I'd personally be very interested in owning a certified airband/ham handheld transceiver, and I suspect that the other 14,000 ham/pilots would be too.

190. 5 MHz steps in UHF on FT8000?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-02 00:00:00 UTC
From: dddavis@atl.mindspring.com
Message-ID: <6b3dkj$dht@camel15.mindspring.com>
Source record: 154807

The Yaesu FT-8000 allows 5 MHz steps on the VHF side, but only goes down to 10 MHz steps on UHF. Is there a mod or work-around which would allow 5 MHz steps on UHF on this radio?

I have the ADMS-2 software for this radio, and I tried changing the yaesu.ini file by adding AllowAnyFrequency = 1. I hoped that perhaps the software would then allow me to program these frequencies by computer. Unfortunately, the software continues to tell me that the frequencies I am trying to program are not valid. The frequencies of interest at 436.805, 436.795, and 436.785.

Any help / advice appreciated.

regards, Don (KE4KYO)

Heh heh! Yeah, Slinky antennas of one stripe or another have been around quite a while. Can you imagine the grin on the face of the first ham to see one and click to the possibilities?

I made a slinky dipole once. Hard to get a good match and keep it, due to mechanical instability, but it sure was little. I could have used a good antenna analyzer when I was messing around with this idea.

Hi,
Name here is Gerry (WD4BIS) and I have been writing a column for our club newsletter called "New Ham Partner". With the influx of No Code Technicians on the repeater, asking the same kinds of questions I asked 20 years ago, I have been trying to answer them. Some of the articles are technical, some of them are general information, but they all address subjects that our new friends are struggling with.

I have set up a web page for these articles. On this page, I have placed the columns I have already published in past issues of our newsletter.

Doing this on a web page has advantages, the big one being that the articles wont expire in a newsgroup, I can edit or update old ones and add new columns as write them, and I wont have to send re-posts.

The Cost..I will ask that you do not edit the articles (except for the normal formating to fit you newsletters), and use my by-line. If you use them, send me an E-mail and let me know when and where. If you have a spare stamp mail me a copy of your newsletter to Garland Amateur Radio Club (K5QHD). The address for the GARC is on the web page. I really do understand how tight a club postage budget can be.

Where... http://web2.airmail.net/gerryc/newham.html

I am posting this every six months or so to the newsgroups.Four new articles just added bring the total up to 21.

BTW the address for GARC webpage is http://web2.airmail.net/gerryc/garc.html and my personal web page is http://web2.airmail.net/gerryc

> (This was not with the rubber duck, but with a dipole antenna cut
> for the airband frequency range.)

REPLY...

Yes Lee, you can modify the the FT-50 to transmit on the aircraft bands (I'm not saying it is legal to do so, only that it can be done).

However, the software modification you describe not longer works with the new models (FT-50RD). These models require solder jumpers, and resisters, to be removed for the modification. Instructions can be found on the internet.

Disclaimer: kiddies, if you're reading this message, don't mess with the aircraft frequencies - there are severe things that can happen to you if you interfere with a commercial aircraft's transmissions. If someone gets hurt, you won't see daylight for many decades.

Cutie Boy,

She's probably using a 49 MHz portable phone and the 3rd harmonic is 147 MHz.

Wait for a sale and buy her a 900 MHz cordless phone -- I've seen them for $50! Just explain the situation to her politely. It's probably the the best thing to do for your neighborly relationship.

As I mentioned in another thread, I am working on a screen-grid modulation mod for the Kenwood TS-830s which uses two 6146B finals.

I understand that the Heathkit DX-35 and DX-40 rigs each used a single 6146 tube, and did use screen grid modulation. I am interested to find out the components that were used in the screen circuits of these rigs.

Can someone help me with a copy of one of these Heath diagrams?

Please contact me at mwilson at flex.net.

.........Monty N5NVM.

Scott,

I understand there was a factory update that possibly might be associated with your problem. The PCB trace that connects the power output transistor's bases to the base resistors involves soldering a heavy wire to bypass the traces. Evidentally, those traces are not good enough to handle the current.

The TWOER was my first 2 meter rig too. I was net control station for awhile back in 1965 for our local 2 meter ARES net. I was in high school at the time and the twoer was all I could afford. Just the thought of running a 2 meter net on AM brings back all sorts of fond memories, but not any I would want to live through again.

To no one who wanted an answer...

One of the oddest things we do on news groups is expect a straight answer.

Go here to a n.g., ask a question, and an reply will be forthcoming with the absolute best answer to the question we asked.

Great if it were true.

No one owes anyone a straight answer. Never have. Western civilization then has been declining since the ancient Greeks.

What's the best rig? What's the best antenna? - just tell me so I don't have to waste my time like the people who's experience, effort and money spent I'm relying upon, to tell me what's right from wrong.

All the answers start with the coil of a 1934 Ford model A. And some wire.

[Flame me! I love it! Make me write bad checks! Ooooh, I can hardly wait because I'll be blamed for not solving your problems!].

OK, I'm sorry, spend all of your money on a FT-1000D and a 200' tower, and move to a salt marsh, and win the lottery, and, really serious, Floss! damn it, every single day!

73,
N1XNC

PS - I built a Vertical out of floss and W.A.S. back in 1962. But then they floridated the water... :-(I blame the ARRL for this and the sun spot cycle.

So what's with the FT-920? I think it's worth a try now. Everything after the August [7H] serial # seems to be cool.

Where is the best deal on the Icom IC-R8500 receiver? I realize Icom has a $300.00 instant coupon rebate right now, but are any of it's dealers discounting the price itself beyond that? It seems there's a lot of price fixing going on in the industry lately! Everybody is advertising the same price, almost to the penny. I though that was illegal?

Thanks,
Bill Crocker

ALWAYS fun to confuse the "younger generation" of hams - I built a couple of Heath Twoers in my day (early 60's) they were a lot of fun, cheap and effective - until the repeaters came on the scene, and with the Heath's WIDE regen receiver - there went the band!

I'm not sure you can't. TenTec sells some really nice 6M & 2M FM xcvr kits as well as some really decent 2M & 6M transverter kits...great quality at a decent price. For HF rigs there are several choices for great kits, most (all?) QRP...Wilderness, OHR, TenTec, Small Wonder Labs. There's also an outfit getting ready to market a CW/SSB xcvr kit that looks real good...can't remember the details offhand but I'm sure some others will know. I miss Heathkit too, but there are alternatives.

You're right about the Sixer, tho. Mine still works, too...

Hi Lou:

I have the DEM 144-28 transverter that you were asking about. Its a great piece of gear. More sensitive than my old multi-mode transceiver but at same time it is very hard to overload its front end. I can operate 5 khz away from very strong signals and not know they are there.

It's easy to interface with an HF rig. DEM even offers pre-made interface cables for certain transverters and have seemed amenable to doing custom cables when necessary. Service and support is great.

I can also list a few things that may be drawbacks to you.

1) The price is several hundred dollars more than the Tentec unit. I believe the assembled units go for about $400. They are available as kit for less.

2) The transverter does not have the commercial appearance that you have come to expect from the likes of Kenwood, Icom, Yaesu, or Ten Tec. In truth, it looks homebrew and I would have been happier if it had been painted.

If you get a DEM transverter you should be very pleased. DEM has a web site if you are interested. You can download a catalog, interfacing hints, and unit specifications from the following:

I don't think you can return a single memory to the "unused" state by using the radio's controls. You can mask a memory so it does not appear as you sequence through them, but that's not quite the same as "unused" status.

You can clear all memories to unused at once with a particular power-on sequence, but that's fairly drastic.

The best way to manage memories is with the ADMS software. It will let you play with the memory contents to your heart's content. When you've made up your mind, it downloads a new copy of *all* of the memories to the radio. That should let you make a memory unused again, though I haven't explicitly tried that yet.

Dave

snip!

Hi Tom,Don't really know what a "regular base" is in your perception! I use it as my base as well, as I only have one HF rig. Did have the opportunity to use it side-by-side with a friends TS-940SAT for a couple of weeks. I never heard a signal on the 940 that I couldn't hear on the 900 as well. Must admit that the quality of receive audio, and the ability to separate strong signals on SSB was better on the 940. That could have been that I don't have a ssb filter in the 900 and the 940 did. There wasn't that much difference that, that if given the opportunity, would swap it for a 940.

Never had any over-heating problems and use it in all-modes including RTTY and Pactor but mostly CW.

In addition, before purchasing it, I had the opportunity to make a side-by-side comparison with the IC-706 and TS-50. VHF wasn't, and still isn't on my list of priorities, so I don't regret my decision.

The Twoer was my first 2-mtr rig, when I was 14, back in the sixties as well. Had the Tower and a Sixer in my first car, a '53 Merc, when I turned 16., along with one of those halo-style antennas. :-)

Hello!

I've recently updated my TV-7/U tube tester pages, including an extensive new list of tube settings and also some additional info about them, as published documents.

Please, feel free to take a loot at my WEB page at:

http://www.geocities.com/SiliconValley/6992/

Look at the TV-7 page (and, of course, whatever you want :-) !)

Hope you enjoy it. Any feedback welcomed!.

Best regards.

256. marine and ham band radio?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-03 00:00:00 UTC
From: Lab Assistant <gte900f@prism1.gatech1.edu1>
Message-ID: <34D73EC1.2838@prism1.gatech1.edu1>
Source record: 154643

Has anyone ever tried modifying a marine band radio to work on the
2m band? I they may have gotten me by their advertising, but the marine
radios
seem to be built to take more punishment than a typical HT or even
a "MIL-810" version (I have never owned one though). Some claim
waterproofness even in a saltwater
environment. It seems like they would be a good choice for hiking,
emergency or a radio that needs to stand up to the elements.
It would also seem to get around the problem of using a ham radio
outside
of the ham bands, you would then be using a marine radio on the ham
bands, which should be OK. Along these lines is it possible to use an
aircraft band radio on the ham bands (is there 2m AM? or is it
modifiable to SSB or some form of FM?
Has anyone ever tried any of this?

What ever happened to "The customer is allways right"? I am quite surprised that Denver Radio or any other retailer would ever want a response like the above posted. As someone else said, they must have all the business they need. I am in the market for a VX1 and the last place I would ever go for that or any other hardware is Denver Radio. Good Luck Tom

wrote:
: Just wondering if someone _knows_ if it's possible to push a HTX-202
: into 9600bps using the VOX interface (soundcard audio out -> HTX-202 Mic
: input). I know 1200 is all that's recommended because of the high
: output needed by the soundcard, but what risk do I run if I try to push
: 9600? A fried soundcard, fried interface, or fried HT? Thanks for any
: info.
:

A HTX-202 will certainly do 9600bps, after modification. The
9600bps node in my basement is proof of that.

On the other hand, you simply cannot do 9600bps through the mic and
speaker ports, period. Why? Because the audio pre-emphasis and
de-emphasis circuitry, among other things, distort the signal into
unusability. If you want 9600, you need to tap the discriminator. It
took me about 20 minutes to locate the appropriate taps and to make the
cable.

As for possible damage - you won't hurt anything. Just because
you're trying to generate higher data rates doesn't mean that you're
putting out more power. Whoever told you that it does, was highly
mistaken.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

REVIEW: QST VIEW - QST on CD-ROM, American Radio Relay League

For many years the American Radio Relay League, aka the ARRL, has shown little interest in my favorite equipment - tube-based radio communication gear. A few years ago a couple of articles were published in QST about the resurgence in interest in this subset of the hobby. It must have resulted in much favorable comment from readers and members because the League has apparently taken notice of we who love the vintage stuff and our interests.

Recently the ARRL began to release some of their documentary material including QST on CD-ROM. For those of you who are not familiar with this, Compact Discs hold 650 Megabytes of information or 74 minutes of audio. Most records are now released on CD. They are digital of course and are read by an optical reader connected to your sound system for audio and play just like a vinyl record except there's no wear and tear on the disc. Just about all computers sold these days have a CD drive to read data stored on CDs and almost all software comes on this media. The ROM means Read-Only Memory but this is somewhat of a misnomer because in reality its Read-Only Storage. So essentially the CD is a storage device that holds a LOT of stuff - the average page of ASCII text requires 2 Kilobytes of storage space. A scanned page with pictures will require more, in some cases over 100 times as much space. The current Handbook is available on CD as well as the Callbook which is no longer available in paper form. There is also a trip planning program that will also include and highlight the VHF/UHF repeaters along the route.

Back to the League and its QST CD project. Recently they began to offer the back issues of QST on CD working backwards from the 1990s. We are the main beneficiaries of their quest to eventually have all issues of QST available on CD-ROM. It's a fine way for the League to recognize the incredible interest in the older equipment we all love so much. I am very pleased to see that QST is now available from 1940 to 1996 in the following libraries:

1940 - 1949

1950 - 1959

1960 - 1964

1965 - 1969

The rest of the collection is sold in five year increments to 1994 inclusive. 1995 and 1996 are available by the year as part of a compilation of the three ARRL periodicals; the other two being QEX for experimenters and NCJ for

contesters. Price is $39.95 for each library. The annual periodical 1995 and 1996 compilations are $19.95 each. (plus $4.00 shipping). The ARRL's toll-free order line and Web site are listed further down the page.

I took a good look at the 1950-59, 1960-64 and 1965-69 libraries and here's what I found.

Virtually every page containing articles, columns, ads and covers have been included in the collection, even the classified "Ham Ads". Each library comes with a program called QST View that manages the indexing and data. When installed QST View builds its own index database. Should you add an additional library set later you will be given the option of reinstalling everything or just updating the index database. This installation can take anywhere from five minutes on a Pentium 90 to 30 minutes on a 386. Your computer must be running Windows (3.x or 95) to be able to use QST View.

Once installed and the index constructed you can search for information by article, column, author's name/call, year or month or just browse issue by issue. The search query form will support the use of some DOS "wildcards such as *, <, >, etc. QST View has two windows - the Index and the Document Viewing Window. Once you have located an article you can close the Index window and the Document Viewing window takes the whole screen. You can also fit the image to the viewing window, pan and scroll the article, even print it out if you wish.

As far as content is concerned I found that the libraries I examined are full of information on tube-based equipment and I imagine that the libraries into the mid-1970s will be as well. I hope to take a close look at the 1970 to 1974 library shortly to see if this collection fits into our area of interest as well as the earlier libraries as they are made available. In short I found QST View and its' associated libraries a very useful reference source especially the earlier issues. The rich history and lore of Amateur Radio was well chronicled in the pages of QST which is the official journal of the ARRL as well as a technical publication and makes for very interesting reading. I am especially looking forward to seeing the libraries from the 1920s, 1930s and 1940 and hope that the ARRL will see a good enough response to the earlier libraries it now has available to encourage them sufficiently to produce the earlier QSTs on CD as soon as possible.

For more information you can contact the ARRL either by phone at 1-888-277-5289 or via the Web at www.arrl.org/catalog

Just curious, but did you happen to document the needed mods? I solder and probe with the finesse of an elephant on things shrunk to that size. If I thought the mod was clean enough, I may would try it instead of a data radio to play with 9600bps.

Thanks,

David

Gus, the manual that comes with the MFJ-68, the upgrade kit for 249>259, says
to ony adjust the one pot installed, otherwise return
to MFJ for recalibration.
They seem to be a good outfit to deal with, why not inquire as to
cost of factory recalibration? Then you can be sure of it.

I agree with Doug. The 500 Hz filter is the best all around narrow filter choice. It will pass RTTY and Clover II and PACTOR as well as being suitable for CW. I don't operate much SSB, but the stock filter is Ok for the casual operating that I do on voice. You can shift it around to eliminate a lot of interference.

: Actually I wanted to use 2 antennas, each covering a different range on 1
: scanner

You can, but using a simple T will louse things up-the antennas in
paralell will not match, impeadance wise.
A spliter/combiner(in this case, used as a combiner) is the correct way.
One with a amp might be needed if the loss in the combiner causes
problems.
I've never heard of a a combiner that is intended for your exact use...a
frequency selective unit would have less loss than a simple broad-band
one.

Either way, that's how it's done.
```

: C. Jespersen K2OG/AAR2JE

I realize that you may not like to deal with this:but you don't need to be
a MARS op to legally mod a transmitter.
USING it out-of-band, OTOH is a different matter.
Of course, in a real emergency, out-of-band operation is not only legal,
but very clearly stated as much in part 97.

You can bet that the poster will get the info anyway-probably a simple
search, using any search engine will find the data within 15 minutes.

BTW, I've been a HAM for enough years to know the rules.

274. TS830S mod for s.g. mod AM?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-03 00:00:00 UTC
From: mwilson@REMOVEflex.net
Message-ID: <34d75370.0@news.flex.net>
Source record: 154661
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment

Hello all.

I am interested in applying screen grid modulation to the TS830S in order to AM the transmitter. I'm only interested in using it on 160m and above 29 MHz on 10m.

My first test was to take the output from the screen grid modulator tube in a TR-4C and connect it to the wire which feeds reduced screen voltage to the finals in "TUNE" mode on the Kenwood. This wire I disconnected from the "TUN" terminal on the rectifier board and connected to an audio cable to the TR-4C.

This first test had mixed results. The voltage output from the Drake was +60v at rest and peaked around +220v. This resulted in readings on my average-reading wattmeter of 30w and 60w, respectively, coming out of the Kenwood's transmitter. Of course, I could reduce the "carrier" control to get values less than this. But the audio from the Drake's mike cannot be heard on the signal. The level of the carrier comes up, but no audio could be heard on it.

This led me to the suspicion that there was too much parallel capacitance and series inductance in the circuit, so the screen grids were only being modulated at sub-audio frequencies. So I replaced the .01 screen bypass caps with 100 pF, and moved the cap and inductor at point PD2 on the rectifier board to a point that is in the circuit for CW/USB/LSB but switched out at the "TUNE" position.

The result of this second test is that a little audio can be heard on the carrier. But still a very low level and only low bassy tones of voice. This leads me to believe I am heading in the right direction.

With the cap and inductor at PD2 out of the circuit, I am running out of components to change. It looks like the next steps are (1) to disconnect the Drake screen modulator from its own final circuits, so it is feeding only the Kenwood, and (2) reduce the inductance of the Kenwood's screen grid inductor. This second one makes me nervous because this change, like the reduction of the screen bypass caps, would be in the circuit full-time, even when I'm running CW or SSB. That means all bands, not just 10m and 160m would have to be checked out completely to make sure no oscillations are going to happen.

If this works, I want to build an external modulator based on the Drake circuitry, sourced from the Kenwood's own supply. Then I will have to be very careful about bypassing screen RF to ground in the modulator circuit.

Have any of you ever done this before? I checked Deja News and came up empty. I would like to hear from others who have done something similar. Please write me at mwilson at flex.net.

Thanks,
.......Monty N5NVM.

275. ** Making a FT747GX legal again **

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-03 00:00:00 UTC
From: G.Milligan@Sheffield.ac.uk
Message-ID: <G.Milligan-ya023080000302981742320001@bignews.shef.ac.uk>

Apparently to convert a FT747GX to provide continuous transmit capabilities between 1.5MHz - 30MHz you cut a wire and dial up a certain frequency, switch off the radio and then switch it back on again and hey presto you have general coverage TX/RX. The details for this modification seems to be widely available.

However I am interested in reversing this modification, back to its correct HAM band / General coverage RX configuration. Has anybody successfully tried it?

Is it just a question of reconnecting the cut wire?

I thought I would just ask before I damaged anything whilst attempting to reverse the mod.

Thanks.
Greg.

277. How important is dual receive on a dual-band radio?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-03 00:00:00 UTC
From: davem@cs.ubc.ca
Message-ID: <6b7n7s$3db@redgreen.cs.ubc.ca>
Source record: 154664

I'm starting to look for my first mobile rig, having owned only a pair of handhelds until now (FT-50 and FT-51). I want it primarily for base station use now, but could see transferring it to a car later. Because my car is small (Honda Civic), I see the ability to remote-mount the radio faceplate as a definite asset. I use both the 2 m and 70 cm bands, so want a radio that covers both.

The one obvious class of radio to look at is the standard dual-band ones. The Kenwood TM-V7A, Yaesu FT-8100, and Icom IC-2710H are representative of this class, and all have most of the same features. All will receive two frequencies at once, or operate full-duplex cross-band, or act as a cross-band repeater. The Kenwood seems to have the best collection of features for the money, including simultaneous alphanumeric and frequency identification of channels, DTMF and CTCSS decoders built in, and a large display to show all this. The others require (expensive!) add-on boards to get DTMF and CTCSS decoding. (The Yaesu FT-8500 is in a higher price class, and I don't like its human interface design anyway. So I'm not considering it.)

However, there is also the Icom IC-207H. It covers both bands, but with just a single transceiver. You can't listen to two frequencies at once, operate full duplex, or cross-band repeat with it. CTCSS decoding is included, but DTMF decoding does not seem to be possible. And it is about $200 CDN less expensive than the Kenwood, about $300 cheaper than the Icom and Yaesu with their CTCSS decoder options. It has similar power output to all the others. Also, like the 2710, almost everything on the radio can be controlled by the microphone. It even has a "9600 baud packet" interface jack that the 2710 lacks.

As you can probably tell, I'm tempted by the 207. I haven't found the single-receiver design of the FT-50 to be much of a disadvantage compared to the dual-receiver FT-51. Am I likely to miss dual receive in a base/ mobile radio? Enough to be worth $200-$300 extra?

Dave

Do you want cross band repeat?? If so that radio will not work for you. I have a FT-530, Yeasau daul and love the dual recieve. Mainly, you have to ask yourself the questions, what will you use the radio for and what do you need. The 9600 packet hook up is a good idea. More radios need that for packet to start being more efficent and used regularly.

Hope I can be for some help,
Brian, kf4frp

Source record: 154675

SIMPSON 360 DIGITAL VOLT-OHM-MILLIAMMETER. Bought it and found I could not test it, because it uses a three prong unique sized Simpson extension cord that appears to be no longer available from Simpson (I tried to buy it). It has a battery compartment for battery powered field use, but one of the metal contacts need replacing so I could not test it that way. The point is I don't wish to put any money into it if I can't buy a power cord for it. I wanted it for bench use. I would guess that it does not run, but maybe it does? Probably good for someone who wants a back up parts unit for their Simpson 360. It's a shame, because the thing is a super unit in nice physical condition. Do not have leads or manual. $20 or best offer.

Plus Shipping costs which are not much. I'll pack it free.

-OR- Will take old running complete decent VTVM in trade.

Gary Coffman <ke4zv@bellsouth.net> replied (mildly, given the provocation)
to John Miles <jmiles@pop.removethistomailme.net>, who lead with
this red flag:

> >The above is one point of view. Another point of view ...

All points of view are equal? Rarely.

> >never seen a scientifically-controlled test that has EVER conclusively

I guess you missed the cover article on IEEE Spectrum a couple years
ago (1996) which reviewed the literature and explained the theory in
good EE theory not just maybes and howsas but with dBd & dBm's.
It was the cover article, so you should find it with no problem at
any good library.

John should also that his not having seen it doesn't mean it isn't
there.

> I am content to stand by the conclusions reached by the FAA and NTSB

I'm much happier standing by their conclusions after I read the IEEE
Spectrum article.

>the other for SSB.

My personal opinion is that 250Hz is too narrow. (unless you plan on some very weak-signal VHF operation, like EME or meteor scatter) If stations answer your CQs too far off frequency, you won't even know they're there. I think 400-500Hz is a much better choice for most operation.

Don't work enough SSB to have a good opinion. I have 2.1KHz SSB filters in my rig & am happy with them.

> Thanks,
> Wayne N9OGE

Wayne, the UM9401 was originally made by Unitrode, now Microsemi Watertown division. Microsemi's 1998 catalog still lists the part; you might try http://www.microsemi.com or contacting Watertown division at (617) 926-0404 to find the Microsemi distributor nearest you. And it should be the right part for your application, since the UM9401 is a PIN diode "...specifically designed and characterized for solid state antenna switches in commercial two-way radios (Microsemi's words, not mine)."

Good luck -

From: cnord@snet.net
Message-ID: <34d65fb4.886007@news.snet.net>
Source record: 154700

Hello All
A coworker offered me a radio from his grandfathers house. He told me it was a Motorola and his grandfather used to be a volunteer fireman. Expecting an old VHF BA, I was very surprised at the small box he brought in. It has an unusual red Motorola logo and says transmitter T-69-20A on it.

Opening it upI found several tubes including an 807 and a 6L6 a 7.997 MHz crystal and 3 small transformers. In addition the coils in it are obviously not VHF !
Looks like a H.F. xmtr of some sort w/ a modulator. Anyone know anything about it ? If I am correct I would love to get it onto 40 meters.
Can anyone help ?
Thanks and 73

Konigsberg was bought by Narco decades ago and re-named Konel. It was bought
by Furuno in the late 70's. All the manuals for the Konel stuff went with
Narco and were probably destroyed a long time ago.

Message-ID: <19980203040900.XAA23820@ladder03.news.aol.com>
Source record: 154717

Good condition NRD515; scratches on top. Superb performing radio.
$700. Set up for RTTY with expanded Delta-tune multi-turn pot installed by
Universal Radio. Manual copy included. This is much quiter (less digital
"hash") than even the Watkins-Johnson HF-1000. If you are in a REALLY quiet
location, you'll appreciate this radio even more. Covers 150 kHz to 30 MHz. AM,
SSB CW RTTY. Has 2.4 and 6.0 kHz filters...I will provide new CW filter to
purchaser who takes set with the memory unit

Price $700 + shipping and insurance
Or buy with NEW (in box) NDH518 memory add-on, $825 for everything.
Near NYC.

>Subject: Can you hook up 2 scanner antennas at one time?

>For example one designed for 800 mhz and one that's full range?
>
>would you use just a bnc t- connector?

No...the two radios would interact seriously, since most radios contain
multiple mini-transmitters (oscillators).

A power divider followed by an amplifier to
a) make up for lost gain (in the divider)
2) provide isolation between outputs

is called a receiver multicoupler. They're avalable from Grove Enterprises or
Universal-Radio

318. Problem w/ Knwd TS430s

Date: 1998-02-03 00:00:00 UTC
From: sdickson@iamerica.net
Message-ID: <34d6983f.517351821@news1.iamerica.net>
Source record: 154719

I am having an intermittant problem with my Kenwood TS-430s
(serial # 4011115) that has me puzzled.

The output power will occasionally fall to nothing while transmitting
on the 10 meter band, both in CW and SSB modes. I have a MFJ
SWR/POWER meter in-line, so I see the power fall from 75-100 watts to
less than 10. It may only last a few seconds, or it may last several
minutes.

When this happens, I have switched immediately to 15 meters and 40
meters -- the rig seems to be working fine there -- but back on 10
meters, it is anyone's guess as to when the power will come back up.

Any help would be appreciated.

Source record: 154720
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment

Just wondering if someone _knows_ if it's possible to push a HTX-202 into 9600bps using the VOX interface (soundcard audio out -> HTX-202 Mic input). I know 1200 is all that's recommended because of the high output needed by the soundcard, but what risk do I run if I try to push 9600? A fried soundcard, fried interface, or fried HT? Thanks for any info.

Source record: 154725

In my posting I did not mean to imply that I was able to transmit in AM, just that what I was able to transmit was readable on an aviation receiver. First I tested in with another aviation handheld a few hundred feet away and then by transmitting to an aircraft 5 miles away. Since I was doing the transmitting, I don't know how generous the receiving pilot was in giving me a 'loud and clear'. However, in an emergency with aircraft flying overhead, you only need to transmit less than a mile to achieve the desired result.

I still think that a dual mode transmitter would be a great product for ham/pilots and could be a enabling step to transition the aviation band to FM at some future date.

Yes, a FT-50 will tx on air freqs.
No, it will not tx a properly modulated signal-as the 50 is NFM tx only-of
course, air is AM.
While a avaiation radio MIGHT be able to produce a readable output from a
NFM signal, by slope detection, I sure as HELL would not want to COUNT on
it!!
I guess in a emergency, you do whatever has to be done.

: I still think that a dual mode transmitter would be a great product for
: ham/pilots and could be a enabling step to transition the aviation band to FM
: at some future date.

I agree that a dual-mode radio for ham/pilots, or for that matter for
business band/pilots would be a interesting idea, and one that would sell
well.

I'm looking for a pair of lo-bandsplit vhf (138-150.8 mhz) G.E. Mastr II mobiles for a repeater project. Second and third last digits of model number are 56 which denotes this bandsplit (atleast on US versions....not sure on Canuck ones). Would prefer to buy Canadian to stay away from that nasty old exchange-rate....but will surely consider all replies. Also needed is a compete service manual.

Mike. At the top of your price range you get a nice used Kenwood TS850 or Yaesu FT990. Both these rigs are top notch performers that are a definite step above what you are considering. I have seen both of these rigs with internal antenna tuner listed on this newsgroup for $1000 or maybe even a little less! The Yaesu FT990 comes in two versions. The cheaper one would be the FT990DC model which has no built in power supply or otional 500hz cw filter. I personally own and prefer the TS850, but either one would be a great rig for you that would probably satisfy your needs for quite a while.

Source record: 154484

David,
The information you gave me is very helpful. Thank you. It looks
like the person who owned my T-21A took VERY good care of it. I like
it a lot. It has a soft case, 1100 MaH battery he purchased for it,
all the books, already modified for out of band. I guess I can't
complain.

The person selling the 299H wants around $200.00 for it. That's
too much. Heck, I could almost buy a new one for $220.00

Thanks for all the comments,
Chris

336. Re: Icom 706 Mark II to D-104 Wiring Information

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-04 00:00:00 UTC
From: cartercook@aol.com
Message-ID: <19980204193801.OAA09885@ladder03.news.aol.com>
Source record: 154485

>I would like the wiring pin-outs for connecting a standard Astatic
>D-104 to Icom's RJ-45 8 pin microphone connector.

If you've got the standard "squeeze" type PTT base on the D-104, the pin out to the terminal strip goes like this: connection "a"- the ground lug- is a black wire connected to one side of the mike AND to the shell of the mike housing; connection "b"- the next in line- has a green wire from the mike and a white/green wire going to the normally closed side of the "squeeze" switch; connection "c"has a yellow wire to the normally open side of the "squeeze" switch.

Are you using a pre-amp to make a better impedance match and sig boost for the D104 to a modern transmitter? Will probably be necessary.

Let me know if I can be of further assistance. If necessary, I can provide a drawing of the D104 connections.

The PTT on most ICOM mikes just need to connect pin 5 to pin 6 . Mike input goes to pin 1; mike ground to pin 7; and you can get 8vdc from pin 2 to power your preamp.

337. Need Icom IC-T8 mod

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space,slac.rec.ham_radio,tw.bbs.rec.radio.amateur

CHINA HAM NEWS 2/4/97: BY1QH EME Schedule

Courtesy of Lasse (BY/)SM0KAK & David BZ1BM
Tsinghua University Amateur Radio Club, Beijing, China

* * * * * * * * * * * * * * * *

To members and friends of BY1QH.

You are all most welcome to participate in the following activity!
Please contact David BZ1BM or Lasse SM0KAK if you plan to show up.
Note that our cances of making a EME QSO before 1630 UTC (0430
local time Sunday morning) are not too good due to local QRM.

BY1QH WILL BE QRV ON 144 MHz ON SATURDAY, FEBRUARY 7
This is the first time we are QRV in a EU window except for last
ARRL contest. Make sure you are the first in your DXCC to work BY
on EME! So far only SM, W and VE have been worked from BY.

UTC
1130-1230 EME random.
1230-1300 TEP sked SSB 144.136 MHz with VK6XLR
1300-1330 EME sked with PE1LCH, PA2CHR tail end. QRG unknown NW.
1330-1600 EME random
1600-1630 EME sked with PE1LCH, PA2CHR tail end. QRG unknown NW.
1630-1800 EME random. From 1700 our local QRM is less bad!
1800-1830 EME sked with PA2CHR. QRG unknown NW.
1830-2035 EME random
2130-2230 CQ DX 1827 kHz +/- QRM, 400 W & dipole at 30 magl

During these hours we will be QRV on +86-10-90854674.

We will not accept more skeds (PE1LCH and PA2CHR have lent/donated
major parts of the station). On the other hand you are welcome to
send an e-mail to era.sm0kak@memo.ericsson.se telling that you
will be calling us, and what time periode you plan to be QRV. This
might help us to pick up your call sign. Will anybody be able to
be QRV in the first hour (1130-1230 UTC)? The moon will be below
the horizon in most parts of EU and NA then.

All RANDOM EME is on 144.136 MHz, using 2 minute timing, BY1QH
transmits in the "first" period. Please spread out +/- 1 kHz!!
(We will not move our TX)

We have lots of birdies and local noise. The QRM situation is also
not stable. If you spread out it makes it much more likely that
one of you picks a clear QRG! If you hear us and call us, please
do NOT give up even if we give no sign of copying anything! Keep
on calling. This goes for all stations, even if you run several kW
and lots of aluminium! Suddenly the QRM drops and we can copy you.
Stations like W5UN KB8RQ and VE7BQH have been totally impossible
to detect, and then after hours of calling and listening the noise
goes down. Also average size stations have a chance if you can
copy us. During the ARRL contest we copied 4 yagi stations
running 1.5 kW.

Station improvements since 1997 are:
Improved elevation readout at low elevation angles
New RX filter 250 Hz (500 Hz B4), and new PA.

Other equipment same as before:
IC-706 Mk2
SSB electronics pre-amp 0.8 dB NF in mast head
4x9 el Vargarda, total gain 17.7 dB
Stacking loss 0.5 dB, feeder loss 0.7 dB
QTH: LOC ON80DA
Tsinghua University in Beijing
73 ES CU VIA EME
Lasse (BY/)SM0KAK & David BZ1BM

I disagree, Jan. Sometimes earnest questions receive smart aleck replies. Sometimes a troll creates a thread that lasts for weeks by posting controversial questions. But what disturbs me most is the well-meaning folks who post misinformation in reply to honest questions. This is really evident in the rec.autos.* hierarchy. Some of the so-called advice is useless, some downright ridiculous, or worse. Would that all who are eager to provide information would carefully VERIFY it first.

My advice to anyone seeking advice in the newsgroups is to take most of it with a grain of salt. At the very least, one should filter it carefully. Even mine :-)

Just my two cents worth.

Bubba

341. FT-1000mp RX rf amp operation Q:?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-04 00:00:00 UTC
From: kirby.nesbitt@velocity.bc.ca
Message-ID: <886625749@velocity.bc.ca>
Source record: 154490

Experimenting with the receive rf amplifier selections via the menu on a new 1000MP, had a question..
When the "TUNED" amplifier is selected, I notice a 2-3 S - unit rise in noise AND signal strength on 24, and 28 mhz. However, on bands below 40 mtrs. there is a 2-3 S-Unit drop in signal strength (along with a reduction of aprox 3 Db in noise. My question is, given the fact the manual states that when in the tuned-rf amp mode, two specific tuned front-end amplifiers are switched in at 1.9-7.0 Mhz, and 24-29 mhz, why am I seeing a drop in sensitivity on the low bands (<7.0 mhz), when the "tuned" stage is engaged? The flat amp seems to give me better overall sensitivity, granted there is quite a reduction (close to 2-3 s-units on 28.5 mhz), in sensitivity on the 24 and 28 mhz bands.
Is this normal? Can anyone confirm the operation of these amps on another 1000MP (D?).
Possibly, the tuned stage has been engineered for reduced noise on the low bands at the expense of overall gain.
Appreciate any comments. Nice radio otherwise.

I've had my Kenwood 450s for over a year and love it. No problems at all.
IT's a great rig as far as I'm concerned. I'm also thinking of getting the
Icom 706 Mark II as well for the 6 meter/2 meter SSB capability. I've heard
nothing but good things about it.

73,
Tom

Howdy all, name is Pat and I've got a Kenwood UT-50s 6 mtr module for sale. Works in the Kenwood 641, 741, 642, 742 series radios. List is $369.00 AES price $329.00. I'll let it go for $275.00.+ shipping CONUS.

I am looking for a Kenwood UT-220s 220 module. Will trade the UT-50s even up. Will pay up to $275.00 + shipping CONUS. Drop a reply if interested.

Mike,

Someone else suggested that, for a price around the top of your range, you could buy a Kenwood TS-850S/AT. I whole-heartedly endorse that suggestion! As a former owner of a TS-850, I can say without any hesitation that it's head and shoulders better than the other rigs you're considering, and you WON'T be sorry. The '850 offers superb receiver performance (you can't work 'em if you can't hear 'em!). The automatic antenna tuner also works VERY well, and it's fast and quiet with band setting memories. The TS-850S/AT is truly a great rig with contest-grade performance.

I have one negative comment on the IC-735. A few years ago, at our club's Field Day operation, we had three HF rigs going: an IC-735, a Kenwood TS-430S, and a Kenwood TS-130S. The two Kenwoods worked just fine; although we had minimal interference and blocking, those two stations never missed a QSO. The IC-735, on the other hand, had an awful time dealing with the front end overload from the two Kenwoods, and we eventually shut it down and abandoned it, and ran only the two Kenwood rigs. This was, of course, the ultimate in punishment for a receiver, the "acid test", so I'm not sure how or if this would affect your day-to-day usage. In any event, the two Kenwoods held up wonderfully.

The IC-706, while a good performer in the Mark II version, is not intended for mainly fixed-station use, and doesn't offer the big performance and many features of something like the TS-850S/AT.

If you're really interested in a small mobile-type rig for HF, I'd recommend the Alinco DX-70T. They got for around $700 used. I've owned and used one and liked it very much for casual use. It's not a contest-grade rig, fur sure, but a good performer for normal use.

73,

Dean, K5DH

Mike,
I own a MKII and am well pleased with it. I have never compared it side-to-side with a 706 but if you can get a copy of Jan'98 QST, there is a complete write up on the MKII with some comparisons to the older model. The newer version has many refinements over the older model making it, in my opinion, worth the extra cost. Plus you get a warranty and don't have to worry about "buying somebody elses problem".

I think that instead of bandpass filters the output uses lowpass filters for each band. Either that or the bandwidth is wide enough to let a range of frequencies through.

Really? Gosh, I hope whoever developed the 850 did not come up with their
web site.....yikes, what an obfuscated mess.
I just wish the IC-706MKII had the DSP they now have come out with (sigh).
A notch filter would have been nice on it.

I hear that :)

Also my first two meter rig in 1964... spent a week building it, used a TV antenna with its 300 ohm twinlead
rigged to the RCA jack used fo r the antenna connector (what did I know?) Actually it worked ok... from my suburban philadelphia location I worked out about 20 miles. Later went uptown and got a 3 element Hi Gain
and some old RG-58 (wonder what the loss was?) and worked stations over 50 miles away. Upgraded to an 8 element and a rotor plus RG-8 actually worked DX (New York NNJ and Connecticut).

Eventually used it in my fathers car with a Squalo on the roof and a vibrater supply. Finally traded it straight up for a Knight T-60. I think back then almost everyone had a Twoer.

Kirby - The tuned preamp is doing exactly what it is supposed to do. Yaesu made the assumption that most of the time you would be dealing with strong signals on 40/75 meters and that a little less sensitivity could be desireable in exchange for better dynamic range. I leave mine in the flat setting most of the time unless I need a little more gain on 10 meters. A front panel switch would have been nice for this function though. Glad you are enjoying the radio. --- Steve N9ROU

Mike:

I have a 706 Mark II. Was a bit to early and missed the free DSP offer.
It's a great rig...I think you would do well to spend the extra money, get
the warranty, the 20 watts on 2 meters instead of 10, the bigger speaker...the
free DSP kit, etc. etc.

look at last January's QST for a write-up on the Mark II and comparison with
the original 706.

This is one radio that will knock your socks off. Be glad to answer any
question you might have.

Hi Mike:

You can't go wrong with that 450...it's a nice rig. I owned a 440 and an 850
for several years.

If you're going to buy one rig, however, and you like the idea of 2 and 6 meter
operation...you just can't beat the versatility of the 706

This subject has been previously beaten to death on this
group. You will find a complete discussion in at

http://www.dejanews.com

under the rec.radio.amateur.equipment group. Hint, hint, hint. :-)
:-) :-)

In brief, compared to the IC-706 classic, the new IC-706 Mark
II:

1) has a better VHF receiver (though still poor, subject to intermod,
and pretty deaf outside the 2m band);
2) has a better HF receiver;
3) has 2 internal slots for optional filters instead of just one;
4) can accept a soon-to-appear internal DSP unit;
5) outputs 20W on 2m instead of 10W;
6) has direct band-switching buttons on the front panel instead of
requiring you to push buttons and turn the tuning knob;
7) has a thermostatically controlled fan which runs only as needed
instead of one which runs continuously.

My personal conclusion? I used a borrowed 706 classic with an
AT-180 for 6 months and then bought a Mark II and an AT-180. Now I am
looking for some sort of all-band mobile HF+6m antenna which does not
require me to stop the vehicle and fiddle with a clip or wire. Hmmm.

I have a borrowed Kenwood TS-850. It is wired for AFSK on the rear ACC2 connector. To be able to run the rig in FSK with the KAM TNC, or any other multimode, is a connection made from the TNC FSK line to the mic. input line on ACC2? The TS-850 manual only addresses using old RTTY rigs with the rig and not a newer TNC. Thanks for your reply.

73 and God bless,

Have you tried to xmit out of band? My ICOM M-700 marine HF transceiver
transmits 1.6 - 24 MHz w/o modifications. It and the matching MN-100
no-tune, all band antenna are for sale.

Hello all

This message is in response to Steve AC6FR"s message

I have bought ALL of my equipment off of Tom at Denver Radio and have found him to be very honest and trustworthy. I have never had any problems with Warranty work or returns.

I have talked to Tom today and asked him about Steve's Problem and he said the same thing that Steve said. He told me that he has contacted the firm that handles his web page.and was assured that it would not happen again.

In closing I would like to ask Steve if this is not whining or sniveling that why did you not post Tom's message that he sent back to you? And if you did not want a "Polite E-mail" Than what did you want? The way you are acting might be the way to do things in Cotati Ca.but here in Pa we still give a person a fare chance.

As Steve put it "It is however for others to Know" That Tom is a decent and Honest Man. If he was so bad why does Kenwood,Icom,Yaseu and more deal with him?

73 to all

KS4TY, Eddie
reply to:
>gte900f@prism1.gatech1.edu1 (remove 1's from address)

Most marine VHF HTs are a lot bulkier than the latest generation ham HTs. for Hiking, etc, if I wanted to do VHF, I think I would be asking all the FT-50RD owners how their radios have stood up. The ads certainly talk the talk, but do the rigs walk the walk? If so, that's the way I would go.

Note that your marine VHF would no longer be type accepted for marine use. I think it is illegal to convert it back to marine use and actually use it unless it was done by the holder of at least a General Radiotelephone license. But then, who needs to know, if you do it correctly?

The offset for marine VHF duplex channels is 600 KHz, and channel spacing is 25 KHz. Some channels are simplex, and some are either simplex or duplex

depending on whether you are using US or International mode. It will take a bit of ingenuity to set your radio up to have a significant number of useful ham channels with a modified VHF. Most VHF marine HTs don't have a lot of the bells and whistles (DTMF, CTSS, memories, etc) that ham VHFers take for granted, so depending on intended use, you may have to cram some more stuff in there.

On the plus side of your idea, marine VHF HTs are pretty cheap. and the circuit boards are not as "busy" as the typical ham HT.

Good luck. I think your project is a little more ambitious than the old 11 to 10 meter mod, but it should be do-able.

Hi Gang - Please accept this gentle reminder of the following item that appears in the rec.radio.swap FAQ/charter:

"PLEASE DO NOT POST DISCUSSION ARTICLES TO THIS GROUP. If you really must post, please do so to the appropriate discussion group. Use email whenever possible, especially if you feel someone has committed a breach of etiquette."

(The full FAQ is posted by myself on the 15th of each month.)

Take care,
Jeff KH2PZ (custodian of the rec.radio.swap FAQ/charter)

387. Alpha 76A and WARC bands

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-04 00:00:00 UTC
From: Randy Shirley <rshirley@gate.net>
Message-ID: <01bd3133$ce31b860$9b23e3c7@gate.net.gate.net>
Source record: 154536

Is anyone familiar with the WARC problems I'm having with a 76A?

Loading on 10mhz (14mhz position) causes a large blue RF arc on the bandswitch to ground, even at the 100-150 watt level!!

I have also heard that there is a problem with plate choke resonance on 24mhz so I didn't even try that.

> Thanks in advance,
>
> Jeff KN6GI

This happened to one of my other syntisized radios. I figured that the squelch "pot" was bad, so I jumped my own internal "pot" inside the radio upon the center squelch pin & the outer squelch pin.
Schematic strongly recommended, due to the compactness of the 727 radio.

>a
real good receiver.

Nice choice for a General class licensee, Mike, but if the guy is a tech or Novice, he might be happier with 15 or 40, the choice depending on what time of day he would be wanting to operate, and how much the 7100 KHz and up BCST stations would bother him. Also, since Shaun mentioned HTs, he might be a no-code tech, and so 40/15 are not such great choices either.

A nice new MFJ-9020 would be a great incentive to upgrade, though...

Brand New Portable Antenna Analyzers for sale.

Active VSWR meter giving direct readings of both
VSWR and % reflected RF power. It is designed to
check the exact resonent freq. of any antenna, HF,
VHF & UHF.
It has a 4 digit freq. counter and an analogue
meter, with a switch for 2 freq. ranges and 2
knobs for freq. adjustments, Fine & Coarse.
It has major advantages over a standard VSWR meter
in that it sees the antenna system exactly as the
Transmitter sees it, plus the frequency is swept
to see where its resonating. Makes trimming so
much quicker and easier !

I bought one before christmas at Texas Towers for $1549. After making
all the calls to all the dealers, they were about $200 less than the
next best price, and these prices included that coupon deal from Icom.
At the time I bought mine though, they had only one or two left at that
price.

Trade: Motorola R1100A code synthesizer (no manual) for RACAL 6790,
6790G/M, 6793 or 1792 parts chassis.

The 1100A is basically a paging code (tone) generator for testing and
the RACAL 6790 is a professional HF receiver.

Dave thank you for your consice description. How does the Transverter perform on FM repeaters and FM simplex, as I would be using mainly for that as well as weak signal SSB.. I own a Icom 756 and love it. I want all mode 2m but dont want to trade 756 for the new 746 as the 756 offers better HF.....

Thanks again Dave for your time...

---------- I am at that same point you are. Price is an important factor
and had to first decide if I even needed a dual-bander. I have decided to go
for dual-band and thus the price is already increased.

The other response posted comes to the crux of the matter: assess your needs
vs. flash-splash features you don't really need or use or do so with such
infrequency as to not count for much. When you have decided this you will be

more easily drawn to the lowest priced unit that meets your needs. Features you don't use makes the extra cost a waste of money. Get what you need and what you can reasonably expect to grow into.

I have pretty well decided to go for the ICOM 207 but want the particulars of different mics which are not well documented in the stnadard cataloges (HRO/AES).

From: park@cascade.kriss.re.kr
Message-ID: <6ba4c4$d4h$1@usenet.kreonet.re.kr>
Source record: 154567

Hello ?

I have recently acquired a Standard C150 HT from a friend.
When I got it, it was configured to received much wider
frequency range than 144-146MHz. With no manual, I accidentally
reset it and now it can only receive/transmit that 144-146MHz.

How can I modify/program this HT for wider frequency range ?

Any pointer to mod web page will also be appreciated.

Thanks.

419. Re: Problem w/ Knwd TS430s

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-04 00:00:00 UTC
From: Chris Hushak <chushak@fallschurch.esys.com>
Message-ID: <34D89210.5FFF@fallschurch.esys.com>
Source record: 154568

I had one of these little beasties a while ago myself. What is
happening is that it is switching into a 'transverter' mode and reducing
power output.

The fix is easy! Use a paperclip as a probe (turn rig off, first!!!)
and insert into the transverter jack on the rear panel. There is a
switch that is recessed inside one of the jack pins that gets toggled
when a transverter is plugged in. (Sorry, I forget the pin number).
Use the probe to toggle the switch several times. This cleans the
contacts and restores normal operation.

Of course, you can also open the radio and try to access it from the
inside and give it a really good cleaning using contact cleaner. By the
way, my rig was used by a smoker prior to me owning it, so ALL switches
were a little flaky. It's just this one was never used like the front
panel ones were.

Hope this helps,

Chris, wa1zxx

If you want to be wise, DON'T BUY AN ICOM!
I just did and boy am I sorry! These Icoms are plagued with bad PLL
problems that require replacing the cheap, plastic trimmer capacitors
with ceramic ones (which Icom should have used to begin with). Get a
Kenwood or a Yaesu.....or better yet, get a good old Drake C-line. Avoid
PLL digital radios at all cost.............KB4AEP Mark

>>
>> Is it just a question of reconnecting the cut wire?

Yes. It's a loop of wire which emerges from the front panel and goes
right back into the front panel. I think it's brown and toward the
left side.

I don't think you even have to turn the rig off, just re-connect the
wire and the "GEN" indicator goes off. This tells you the general
coverage transmit is gone. You may need to reconnect the wire
then turn the rig off and back on. But it's way easier to undo the
mod than it is to do the mod in the first place.

After this, if you try to transmit out of band, you get an "Error"
on the LCD panel.

Mike,

The IC735 is an EXCELLENT rig, and having owned these as well as the other units, well, I still have three Icom IC735's for mobile/portable/backup use.

The 706 MARK II has worthwhile improvements over the original 706.

The 450's are a nice little rig, although some problems/design errors were made and have been well documented - see QRZ mod lists.

All three units you mention are reasonable rigs for this price range. Suggest you find someone with the units that will allow you to tune around and see if the bells and whistles of one beats the other for your interests.

Bests

I realize your reversing the mod but this is interesting. While the final is solid state and no doubt using broadband transformers isn't their still individual bandpass filters for each amateur band? The question is, even if you converted for 1-30MHz transmit wouldn't you still have a problem if operating on 5MHz for example 1/2 way between 3.5 and 7MHz? Wouldn't one of the bandpass filters have to be in line or am I just out of my tree?

I cannot believe that an outfit such as denver radio would act so stupid replying to the customer as they have. I have purchased 2 radios and some other equipment without a problem. But the reply Tom of Denver Radio gave to one customer has changed my attitude. I would never purchase another radio from this outfit. I am embarrased for Denver Radio. They must think they are the only dealer out there. No matter who was at fault (the customer or the dealer) it is shocking to see this retailer talk this way to a customer. As I said no matter the outcome I have made my last purchase from Denver Radio. (Best of luck to you Tom) (you would almost think this was written by a 7 year old crybaby)

Below is the reply Tom of Denver Radio sent to one of it's customers:

<<>Steven,
> Why don't retransmit this message. At least everyone would knnow the

For Sale:

DAIWA NS-448 SWR & Power Meter

900 Mhz to 1300 Mhz.

Two Ranges: 0-5 watts & 0-20 Watts

Cross-Needle type complete with external

pick-up unit model NS-448U that has type N

female connectors. This external pick-up has

4 feet of cable, that plugs into the 5-pin DIN

connector on back of the meter unit.

Meter has a light and can be hooked to 12vdc,

if you want to have it illuminated.

** It's all like new in the box **, only used a couple

of times back when i was nuts about vhf/uhf contesting

and had a 903 Mhz station.

Originally cost about $175. ......yours for $100.00

plus $3.00 to ship USA/48

I have for sale a 2m HT. It's an Icom IC-2ia.

RX 138-175 MHz, Tx 144-148 MHz

It has 100 memory channels available, and is fairly
easily programmed.
It has 4 power settings at 13.8 volts, 5W, 2.5W, 500 mW, and 20 mW

Has a clock, dtmf functions, power-on timer, power-off timer, auto
power-off,
priority watch, and easy and multi-function modes.

Includes a wall charger, and BP-121 7.2v/ 400mAH battery pack.

Very enjoyable little rig.

$100

Hello everybody,

There is the most powerfull and rear amplifier on sale.

Russian submarine 100 % military BRAND new Transmitter : exiter and

Amplifier. " PLAMIA" brand.

Output power up to 12 kW in CW/AM mode.

Band 1.5-25 MHz

Power supply 380V /3 phase

Input 10 watt in from exiter

Driver 1xGU84B Russian tube

Final 8xGU84B Russian tube

2 free GU84B extra

Automatic tune with memory.

SWR protection , power drops down to 1.5 kW (Full legal power) if SWR is

more than 1:5 !

Dimensions: Amplifier 180x80x100 cm , exiter 80x50x60 cm.

Total weight 500 kg

Item were NEVER used - military supply. Is sold because of the general

military situation .

The price is VERY reasonable : just 2500 USD in Moscow.

Can deliver to USA. Shipment extra payed.

Can swope on HF transceivers, what you have.

The last stock from old Block. Great collectors item.

If interested, please E mail to nrc@netvigator.com

: : Is there a source for a 9600 baud mode for the Radio Shack htx-202
2m
: : handheld?

: There probably is but I hope you're good at micro-surgery HI.

I wouldn't exactly call it micro-surgery. It's a wee bit tight,
but a
steady hand and a magnifying lense was all I needed (and a soldering
iron).
Actually bringing the leads out of the case is the tough part, as it's
pretty tight in there. Here's the how-to I've had lying around for some
time. Obviously, I'm not the author, so credit where credit is due.

==========

From: Gene Kennedy <Gene.Kennedy@f470.n3625.z1.fidonet.org>
Date: Wed, 30 Nov 94 06:04:00 -0600
Subject: 9600 Baud
Organization: Di's Online Cafe - Mobile, AL - (205) 661-8945

To Steve and others who may be interested, heres how I connected my 9600
baud TNC to my HTX-202:

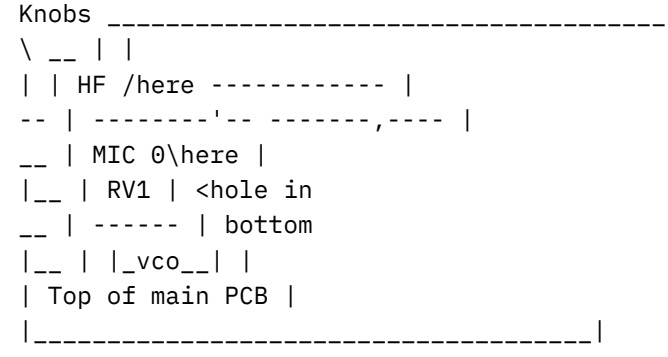
CONNECTIONS TO REALISTIC HTX-202 FOR 9600 BAUD PACKET

NOTE: The following operation requires soldering in very close quarters and damage or destruction of your radio is possible if you get too much heat on nearby wires or components, or by sloppy soldering.

I performed these operations on my own HTX-202 and it works OK for 9600 baud operation with my new Kantronics KPC-9612. I don't take any responsibility for invalidation of warranty or improper operation of the radio, etc.

I studied the schematics and determined the locations for making connections based on general recommendations for 9600 FSK. I didn't want to permanently deface my radio by making any holes in the case for wire penetrations, so I removed the battery and battery connector which is a plastic oval with a spring contact in it held by two screws and ran the wires out to the connector that goes to the TNC. I can restore it to original condition in just a few minutes. I used the smallest coax I had avail, I think it is RG-174. Someone may have a better idea about doing that part.

Open up the HTX-202 by removing the five screws, take off back cover, and separate front panel and lay it on bench so that flex pc cable won't be damaged.



This is a crude diagram of the inside of HTX-202 after splitting case and folding front case aside. There are several sub-PCBs standing on edge that I represented by the dashed lines. In my HTX-202 the sub-board at upper left is labeled HF and the raw output from the discriminator IC goes into pin 1, the first solder pad starting from the center of the radio. This is where I soldered a small coax and ran it out the hole in bottom of case. This is Receive Audio into TNC.

The sub-board labeled MIC is microphone audio to modulator varicap. Pin 6 here goes directly into the VCO and this is where I soldered a second coax. The solder pad 6th pin from center of radio is right next to the RV1 deviation pot. (Dont melt the pot.) This is Transmit Audio from TNC.

The third connection, PTT, is harder to describe the actual point. What I did was flip the radio over and used a ohm meter to locate the solder trace from the center pin contact of external mike socket. It runs from just below mike socket to a small SMD resistor. I soldered a 2k resistor here and ran a tiny wire from other end of it, along the

side of radio and out a slot in case where the cover wouldn't pinch
it, and through the hole in the bottom.

The radio now has to be operated by a power supply, since the
battery contact is gone and the wires are coming out the hole in the
bottom. I lengthened the power wire that was removed from the contact
and connected it to the same power supply as my TNC. The coax and PTT
wires go to the DB15 connector for the KPC-9612. I used the coax shield
for RX Audio as the ground connection, but left the TX Audio shield
un-grounded at the DB15.

I am still in the process of evaluating how well this works on 9600
baud packet. There are very few VHF 9600 baud stations near me (only
one, in fact) but hopefully in the future this will change.
Good luck, and I welcome any feedback about this.....

Gene, WA4WBI
===

....rvz here again....

I followed these directions, and receive works just lovely. I've
only
managed one connection though, not sure if it's a problem with the
hookup,
or just my measly 30 watts not doing the job. Much like Gene, I'm
having a
hard time finding other 9600 activity close by. Anyone know of activity
in
the Northern 'burbs of Chicago?

Couple of notes... Although it's probably necessary to pull the
front
off the radio just to identify the proper points, I made my connections
on
the rear of the board that's exposed immediately after removing the back
cover. Be careful with the routing of the rg174, paying attention to
what
will be crimped when replacing the cover. A friend smoked his when he
screwed the cover back on (what's an ERR 01 mean?), piercing the cable
with
one of the ic pins. I also didn't bother running the PTT cable out as
Gene
describes. I put a plug on the end of PTT lead from the TNC, and use
the
microphone jack on the radio instead.

good luck,
rvz N9ORG

I love mine, but, it has been in the shop twice in 6 months. Speaker
rattle and a 'known' but not much explained problem with UHF to VHF
Cross-band Audio. (Oh yeah, the FSK22 decode kit doesn't quite fit
the way they say it does, but if you have some tape to keep it from
shorting out, it works) Although, It seems that since I got it back
from Yeasu America, the fan sounds like it is on its last legs......ah
Rod, the 1 year is up in August, right ----<grin>

I have an FT-8100R and did not see your post. It has or has had 4
problems:

1) Speaker rattle (even a new one did little to help)
2) The FSK-22 Decode kit requires a shoe horn and lots of insulation
tape to install (It really doesn't fit where it says it should the way
it says it should, but, you can make it work if you can keep it from
shorting out (use the tape). (Yeasu reps know and admit to this
problem)
3) The UHF to VHF cross band audio was non-existent and it had to go
back to Yeasu America for repair (Seems that it is a known problem,
also, so check it if you can before you buy a particular unit.) Works
GREAT after the fix, though.
4) Fan is on its last legs after only 6 months.

Now for the gripes:
You cannot use the DTMF keypad to program frequencies (the way you can
the FT-51R).
The print for the button function ID is impossible to read while
driving (gee, after all it is a mobile rig)
As is normal for a massive function radio without a keypad, keep the
manual VERY handy.
The DTMF does not have an xmit hold function so you have to manually
hold the ptt while dialing (two handed in the car is DANGEROUS.)
There is a mod to help this wandering around.
Dialling from memory is a multi-step operation that is not obvious
(again you cannot use the DTMF keypad to select memory #1 as you can
with the FT-51R HT)

PLUSes;
Has lots of creature features (but then I haven't used most of them -
like smart band scanning/programming when in a new city)
Works great with both one-way and two-way crossband (once the audo is
fixed)
Hmmmm Other than that I guess I just like it, for no good reason.
Yes, I would buy it again.

The ADMS-2D software is GREAT (purchased separately) and it even takes the import data directly from the ADMS-1C and D if you have an FT-x1R, or FT-x0 series. (x=1, 4, or 5)

447. Re: Can you hook up 2 scanner antennas at one time?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-04 00:00:00 UTC
From: Mike Stanton <mstanton@centuryinter.net>
Message-ID: <01bd3110$bf99b000$65a541ce@cen11212>
Source record: 154627
Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment

Also, as I believe Bill Cheek mentioned, there is possibility that the local oscillator of one unit may feed into other radio causing interference under certain circumstances. Haven't personally tested this so I don't know if it would be a major problem or not...My guess is that with quality radios you would be ok doing this. Also, If I am correct, I believe that most if not all scanners will terminate the antenna into a 50 ohm load. This will mean that with 2 radios connect to same antenna in this manner, you can expect a 3 db loss of signal or so. Not too noticeable in theory but again, I haven't tried it...

Glad to offer help, (when I can...not too often it seems)

Message-ID: <#Ts8josM9GA.259@upnetnews02.moswest.msn.net>
Source record: 154335

This opens up a receiver to more wide band RX coverage. CPU/display will
accept any frequency between:
50 MHz - 200 MHz
300 MHz-999.995 MHz (minus cellular)

divided into 4 bands:
50 - 200 TX 144-148
300-400 No TX
400-600 TX 440-450
600-999.995 No TX (minus cellular)

However, proper operation cannot be expected in the entire range, for
instance radio's PLL unlocks below around 110 MHz.

456. Butternut HF6VX vs. Cushcraft R700

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-05 00:00:00 UTC
From: Andrew McFarland <amcfarland@symantec.com>
Message-ID: <34DA5578.F62@symantec.com>
Source record: 154337

Fishing for recommendations. Assuming I don't really care about WARC bands, is there a good reason to pay the extra $140 for the Cushcraft? I'm aware there's an optional counterpoise kit for the Butternut, but it isn't clear if the Cushcraft includes one, won't benefit from one, or whatever. Note: I 'm less interested in a discussion of real radials vs. counterpoise than I am in getting the best bang for my buck. Any first-hand experiences?

-Thanks
Andrew - N7VTB

I don't believe that I've ever seen a IC-730 with an auto tuner. I've used two of these rigs and have found them to be very straight forward rigs with no bells or whistles. The asking prices vary from $300 to $750(w/power supply). I've been happy with the one I got for $275. ;-)

Mary-Frances

When I first purchased the EDC-12, I took it apart to answer your exact question. If I remember correctly the EDC-12 supplies two voltages to the FT-51. One connection is a common ground,, one is a regulated and filtered 11.5V to power the radio, and the third is a current limited 50ma voltage to the battery for charging.

While Ni-Cads can be damaged by overcharging, it generally accepted that a charge rate of .1C (70ma for the smaller pack) is acceptable for a continuous charge. I am sure some will disagree, but I have found that two things will shorten a NiCads life: overcharging at a high current - this causes excessive heating and can destroy the electrolyte, and the controversial memory effect from insufficient discharging of the battery.

Without knowing your usage history, it would be hard to speculate a cause of your extremely short battery life. My FNB35 and FNB38SS (W&W batteries) are almost 3 years old, and working fine. However, I use a third party constant current charger...

I believe they use a Radio Shack Kit frequency counter with the LED
readout and the 9.0Volt battery, or maybe not.

Or maybe as they are the source for all other calibrations, we may all
be transmitting 200Khz off freq, but all think we are on because all the
US freq measuring devices are using them as the source. I smell a
scandal!!

Or it could be the 40 Gazillion dollar nuclear (atomic) clock/oscillator
and physics surrounding it all that makes them think they are right.
But, remember, it was built by the LOWEST BIDDER.

The IC-M710 is a TOTALLY new and different radio than the M700.
About the only thing they share are a couple of digits in the model
number!

I wish I could modify MY M700 to do 10 meters, but I am not so sure I
want to go through that much effort! Good radios, though!

Source record: 154403

I am reburbing the subject piece of test equipment, and the power
transformer has gone south. Specifically, it's a ferroresonant transformer

with 90 -130 VAC input and 115 VAC +/- 1% output. The secondary voltage
no/load is only about 40 volts, and drops 10 - 15 volts under load.

It appears to have a shorted turn, and heats up excessively after being on
(again, no load) for a couple of hours. All components on the secondary
side
of the transformer check out OK.

Would appreciate any info on a replacement transformer, complete 190-A
meter for sale to use for parts, etc.

Help appreciated. Please email directly to me at:
tskelto@ces.clemson.edu

Hi, everybody,

I have a DRAKE SW-1 sortwave receiver (receives AM only). This is a really nice sounding table radio which makes listening a pleasure. It's a year old, in excellent condition, with the original box, manual, and AC adapter. New price is $279. I'll sell mine for $175. If you prepay by money order, I'll cover the UPS shipping cost. If you prefer COD, I'll use FedEx (only) and ask you to split that cost.

73,
Cait

487. FT-990 Rx Problems??

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-05 00:00:00 UTC
From: ke3nj@voicenet.COM
Message-ID: <34DA431E.A12540A2@voicenet.com>
Source record: 154411

I have a FT-990 that doesn't receive anything from the antenna. If you key a rig in the shack it does receive. I had a FT-101ZD that had a fuse (light bulb) in the receiver input line. That receiver acted very much the same way when the fuse (light bulb) was blown.

My question: Is there a similiar fuse in the FT-990??

Thanks,

Dave KE3NJ

488. Pinout for 512K SRAM in KPC9612 -- help?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-05 00:00:00 UTC
From: willmore@whelk.cig.mot.com
Message-ID: <willmore.886714816@whelk>
Source record: 154412

I have a KPC9612 and I'd like to expand the memory for it. I alrady have some 512K SRAMS, but they're not DIP, they're TSOP. I wasthinking of etching up a little PCB to convert it to the DIP socket in the TNC, but I don't know what the pinout of that socket is. The normal 28 pins I can guess, but I don't know what the other four pins do and I can't quite tell from the schematic. Any suggestions? To answer the question before it gets asked, yes, if this works and I can manage to make more, I'll release the artwork and, even, see if FAR wants to make the little suckers. As far as getting people SRAMs, well, you're on your own.

Cheers,
David N0YMV

>out they are really best at low-drain usages (confirmed by their documentation).
>Still they're a good product, but not for transmitter or other high current
>usages.

I can't agree with this more. I did some evaluations of the Renewal batteries and the Energizer 1.5V lithium-iron batteries when they came out. One thing that you'll notice when looking that the discharge curves for these devices is that batteries vary quite a bit in their ability to handle different current drains. Even though a AA might have a Ah rating of 2.7, that is often determined at a very low current--sometimes it's extrapolated from an 'ideal' zero current load. :)

Here's the quick run down of what I found. Renewal and normal alkaline batteries are very similar in their load handling capacities. The renewals had about 85 to 90% of the capacity of the respective plain alkaline cell. The 1.5V Li-Fe batteries are much like NiCd and NiMh in their current drain properties.

The alkaline family likes low current drain applications and derates in Ah capacity as the current increases--to the point that a 2.7Ah AA alkaline just 'breaks even' with a 850mAh NiCd at about 300mA of drain. Anything over that and the NiCd wins and anywhere below that, the alkaline wins. NiMh are supposed to have current handling capacity somewhat poorer than NiCd, but still much better than alkaline. I can neither confirm nor deny that fact, but I can say that it's not much of a concern for the current draws that typical hand held radios operate at--the higher the RX/TX ratio, the better. Considering that 1.35Ah NiMh cells are available and the best NiCd run about 850 to 900 mAh, it's no contest unless price becomes a concern.

Speaking of price not being a concern, the best cells of the lot are the LiFe cells. They have NiCds current handling ability and alkalines current capacity. If they didn't cost $2.50 to $3/each, they'd be my choice as their capacity doesn't suffer vs temperature like NiCd, NiMh, Lead/Acid, Alkaline, etc. do.

Oh, well, just my $.02. As you might suspect, I only speak for myself, not for my employer.

Cheers,
David - N0YMV

Hi Kirb,

The few times I've compared signals with the rf amplifiers in the MP, I couldn't find any change at all on any bands. Maybe mine is faulty, don't know. I feel at times I could use some extra gain in 10.

Check out http://jehosophat.com/1000mp/

for Yaesu FT1000MP related stuff.

I'm looking for a used HF rig for my base station. One fellow has a Kenwood TS-930SAT he'd like to sell, and I'm trying to determine about how much it's worth. Also if it's worth buying.

This would be a first-HF transceiver for me.

I'm interested in your opinion on what it's worth, whether it's worth it, experiences good/bad with the unit, etc. Are there other units I should consider?

Thanks.
steve, N1TMQ

Message-ID: <34DA8E35.181A@azstarnet.com>
Source record: 154426

I own a 2710H. It is a superior radio in every respect: a relatively simple interface, tons of power, rugged, tolerates high swr, easy to modify for extended transmit and receive, runs cool even during long QSOs on max power, integrates nicely with TNCs, etc.

The only problem I've encountered? The microphone was too sensitive (or "hot"), but I hear that defect has been corrected at the factory (I just fixed my own--it works wonderfully).

On a personal note, I don't care for having to pay for the extras: tone decoding and tone squelch call for optional boards that cost $50 to $90.

Otherwise, I'd have to say it's a terrific radio. As a matter of fact, we use this radio in our search and rescue operations in the desert and mountains surrounding Tucson...

504. Alternator whine on FT-8500

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-05 00:00:00 UTC
From: David Rose <fdrose@ibm.net>
Message-ID: <34DA923E.B1A004E0@ibm.net>
Source record: 154428

I just installed my Yaesu FT-8500 in a brand new 1998 Ford Expedition
using the
Yaesu power cord directly to the battery. I am getting a alternator
whine noise.
This is a mystery to me because this radio just came out of my 1991 Ford

Explorer, also wired directly to the battery with the same power cord
and I didn't
have any alternator noise in the two years since I install the radio.

Looking for ideas.

For a scanner, try a TV two port passive hybird splitter, I replaced the
F connectors on the one I have with BNC's. I know their designed for 75
ohm systems but it seens to work fine on my scanner. You may have to
adapt to the F connectors or replace the cable connectors.

>station use now, but could see transferring it to a car later

---

You can't BELIEVE how handy cross band repeat with radios like the 8100 can be. You can set up your FT50 to transmit on 440 and receive on 2 meters and cross band through your car. Comes in handy in the malls, for emergency communications, while hiking in the woods, fishing, etc. - - etc. It's also VERY handy to be able to listen to a different frequency (the new radios will monitor V/U - V/V - UU) such as public service while talking on the radio (emergency communications comes to mind).

Personally I would opt for the true dual band radio. The versatility it offers is well worth the price to me!

519. Re: IC-730 ???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-05 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <19980205023701.VAA05241@ladder02.news.aol.com>
Source record: 154447

The IC-730 has no option for, nor space to put, an internal automatic antenna tuner. There may have been an out-board optional tuner.

The Ic-730 has a typical front end, neither particularly good or bad. The only limiting factor to this receiver is the relatively noisey frequency synthasis design. And this isn,t so bad that the uninformed will notice it, but you would if you had it set up next to a newer/better receiver.

On this NG I have seen the '730's listed at prices between 300-400 dollars, depending on filters, mikes, and stated condition.

Frequency coverage is 1.8 to 30 MHz.
If you have an antenna set for one band, or space limitations, this
unit
will help performance of your receiver on all HF bands.
Features are as follows:
The front panel has switches for Power. (9 - 18 volts DC), antenna
selection (2 antennas),
receiver selection (2 receivers), tuner/amplifier, and attenuator.
Knobs control gain, induction, receive and antenna tuning.
Rear panel has 2 connectors for each antenna and receiver (SO-239ï¿½s
and phono jacks),
and mini jack for power connection.
Ownerï¿½s Manual included.
The unit is in excellent condition.
Price is $50.
Please respond by e-mail as my news-server isn't reliable right now.
Thanks.

I have a Kenwood R-1000 general coverage receiver for sale.
The radioï¿½s frequency range is 200 kHz to 30 MHz. AM, SSB, and CW.
Features are as follows:
Bright blue digital frequency readout plus analog dial.
Clock and timer plus front panel jack for tape recorder.
Push button mode selection.
RF gain control.
Illuminated S meter.
Noise blanker and panel light dimmer.
Front panel earphone jack.
Rear panel has two antenna connectors, ground lug, AC power connector
with switch for 100, 120, 220, 240 volts AC.
Original Ownerï¿½s Manual included.
The radio is in excellent condition.
Price is $200
Please respond by e-mail as my news-server isn't too reliable lately.
Thanks

Kenwood TS-780.
This is an all-mode dual-band base station which covers 144 to 148 MHz
and 420 to 440 MHz FM, SSB, and CW.
Features include:
Built in power supply (120 volts AC or 12 volts DC.
Bright blue digital frequency readout and large illuminated S/RF
meter.
VOX
2 VFOï¿½s
Noise Blanker, RIT, IF shift, F-Step, Scan, RF and AF gain, 10 Memory
channels,
Mike gain, priority channel, and much more.
The radio comes with hand mike, powered desk mike, original Ownerï¿½s
manual, Shop
Manual.
It is in excellent condition.
Price is $600
Please respond by e-mail as my news-server isn't reliable lately.
Thanks

I had a Rat Shack SW Receiver, and the model number was either DX-380 or DX-390, I don't remember which. Sangean is the actual manufacturer. Mine was the model with BFO but without casette recorder built-in. For the price, it was a decent receiver. The problem is, when I was sailing as AB and standing a bridge watch, I would use it on watch to keep up with the news, listen to a little CW, even copy the odd Weather Fax with it and my Toshiba notebook. My antenna was 35 feet of wire running athwartships above the flying bridge. Ether the corona built up by steaming 18 knots into Winter North Atlantic weather, or proximity to the ship's HF and MF antennas trashed the RF amp. I ended up having to run the antenna directly to the first mixer, bypassing all the front end bandswitching and preamp stuff. It still worked, but sensitivity was no longer quite as good. The set just wasn't made for that kind of environment. Otherwise, I got my money's worth out of it. No Synchronous detection, but it would do SSB and CW tolerably well. I do wish there was an option for leaving the LCD display backlighting on... It would go out after a few seconds. I bent a paperclip to hold the LIGHT button in. Another beef I had with the set is that in scan mode, the set would scan to the top or bottom of one of the bands and then zip back to the other end of the band. The band edges are not user-definable. The Beeb's 9410 freq was out-of-band, as was Monitor Radio on 7510 and 7535. Audio was pretty good.

Another radio that I really like in the same price range is the Grundig YachtBoy 400. It is quite a bit smaller than the Rat Shack radio. It has a few more features and better selectivity, but Audio is not quite as good. The YB400 is about $30 less than the radio shack radio, but is not quite as easy to find. Though smaller, it is still nowhere near pocketsized.

I used both radios to make more than a few QSOs with simple QRP transmitters.
Awkward, but do-able.

540. Yaesu Mobile DC Adapter/Charger Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-05 00:00:00 UTC
From: ki0dz@juno.COM
Message-ID: <19980204.200528.20134.0.ki0dz@juno.com>
Source record: 154468

Hello all,
I have a Yaesu E-DC-12 mobile DC adapter/charger. As its name implies, it is a charger, not a battery eliminator. I have used it as my sole battery charger for my FNB-38 and FNB-35 batteries. Problem is, I don't seem to know exactly how long to charge the batteries with it because I can't seem to get any of my batteries to last longer than several months! I am now faced with replacing ALL of my batteries because they are all dead, one won't even register ANY voltage after charging.
I have discovered that keeping the battery connected to the charger at all times ruins the battery. I have found that only keeping it connected during use doesn't work well either. I would like to keep using the charger as my sole means of charging my FT-51's batteries because I aim to have my amateur station powered only with solar energy (see my qsl.net homepage for more info), thus my E-DC-12 is a great asset --- IF I KNOW HOW TO USE IT PROPERLY.
Since the instructions that came with the charger are vague, could anyone out there help me in determining the best way to use this charger?
Thanks in advance for any information anyone can provide! :-)
73,
Mary-Frances

Well, according to the info I've read in the manuals, and in the spec sheets, Here is what I have to say. I own an FT-23R and a FT-530. Both are excellent radios! :) I have the adaptor/charger option for both radios, and they are different. What did tick me off, though, is that on the FT-23R kit, the polarity was manufactured against the norm, ie: center of the connector was negative. I switched it inside the pack to make it stanadrdized. That out of the way, everything else is normal. What you have is a charger that is very dependent on the source... all cars are different, and you might not even have it plugged into a car! Given this, the manual on the 23R states that you shouldn't leave the battery on the charger unattended. The charging capabilities on the adaptor/charger are more or less to give it "just a little bit more" while you are operating the radio using the adaptor. I get that feeling, and also the feeling you shouldn't use it a lot as your main charger. So i leave both kits in my truck, and when i am in my truck, I hook up the HTs and let 'em rip. Usually, on long trips, I unplug the adaptor/charger for a while to avoid overcharging, because I get the feeling it wasn't meant to be on there real long. I'm tempted to say you should do the same, I've lost a few battery packs over the years, but it has been 7 years, so 3 packs in 7 years isn't all that bad of a loss, so i must be doing something right. :) I have a fast charger that I used to us a *lot* with the 23R but I hold that to blame for killing a pack or two, so now I rarely use it, and stick with the 14-16hr wall warts. haven't had a problem in a while. Anyways, that's the feeling I get from the manuals from the 23R and the 530 on the adaptor/charger, maybe they decided to write less for the 51? :)
Hope that helps---
73

>and above 29 MHz on 10m.

>My first test was to take the output from the screen grid modulator
>tube in a TR-4C and connect it to the wire which feeds reduced
>screen voltage to the finals in "TUNE" mode on the Kenwood.

Here's an update on the AM project: I made the circuit changes I planned to in the last post, which had the effect of removing some series inductance and parallel capacitance from the screen circuit in "TUNE" (now AM) mode only, with good results. A friend across town says it sounds like my voice on the air now.

However, it still sounds like I'm providing weak modulation for the carrier envelope I'm developing on voice peaks.

Will anyone who understands the dynamics of screen grid modulation please contact me at mwilson at flex.net? I need to find out how to adjust the one vs. the other. I'm going to try to borrow a scope this weekend so I can look at the signal.

Thanks,
.....Monty.

Strange. at the field day I brought my IC-735A for exactly the opposite
reason, it worked fine when other rigs gave out.

In 1985, when I was looking for a new rig in DL, at a big show. All the
major brands were available for listening (and inadvertent transmit).
IC-735 was the best of the bunch. Of course, there was some progress made
since 1985. Some IC-735 suffered from deterioration of PLL due to poor
contact in its trimmer capacitors. Then the receiver became noisy,
especially with strong nearby signals. This was mentioned in one of the
previous posts and fixes are described in the Icom site.

The new Digi Vox Linkin System allows you to link repeaters or simplex
frequencies through the internet, giving a new dimension to world wide
communications. A simple circuit that allows the control operator to monitor
what is being said at all times. We have been testing the kit and when we have
completed the test, we will make it ready in kit form or ready made.
If you are interested as a ham radio operater in setting up a linking system
for simplex or a repeater you can get on our list at

Can someone please tell me the fair used market price on the Icom digital controller for the Icom IC-701 XCVR? I think it had 2 VFO's and memories. (RM2?) Please e-mail me a fair price on thos unit (not an inflated wheeler-dealer price).

e-mail crslex@iglou.com KB4AEP

$700 for an Icom 730?! They sold new for $800 YEARS ago. And it's even
been monkeyed with! BUYER BEWARE!

553. WANTED: Ten-Tec HF rig

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-06 00:00:00 UTC
From: k5dh@rtis.ray.com
Message-ID: <6bfbh9$8su@sf18.dseg.ti.com>
Source record: 154281
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I'm looking for a Ten-Tec HF rig, something along the lines
of an Omni-D Series C with all factory upgrades, Corsair I,
Delta, Delta II, etc. CW filter is a MUST, and the more
filters the better. Noise Blanker is desirable too. Don't
need power supply, antenna tuner, or microphone, but I will
consider buying a complete station and selling off the items
I don't need. It's okay if the rig has some minor wear, as
long as it's not bad. I'm not looking for a "museum piece"
to stare at and impress my friends with; I'm looking for a
rig to actually USE on the air (as far as I can tell, from
going on 21 years of hamming, a scratch in the cabinet of a
rig never affects how well it operates, but I may be wrong).
Must have the operating manual (a clean copy is acceptable)
and I'd like to have the service manual too (not a must).

I'm looking to spend no more than US $600, including shipping.

In your first correspondence, tell me the following:
- what rig you have
- what options and accessories come with it
- operating and cosmetic condition
- any damage and/or repair history
- your asking price with shipping.

I will respond to everyone, even if I'm not really interested
in your particular rig. I'd prefer that you email me at home:

mustang_maniac@centuryinter.net

Thanks and 73 in advance!

I have a model 201 (cabinet type) Mercury tube tester but have no charts or any information whatsoever. Can anyone point me in the right direction or possibly provide a copy. I restore old jukeboxes in my spare time and would like to use this tester if it is suitable to the purpose.

I am new to the electronics game and learning to rebuild amps. As a result, I also need a reliable Capacitor Tester.

Can anyone give me some ideas on these subjects?

Any help will be greatly appreciated.

Thanks to all for your time and consideration. Joe in Nashville.

Greg, AFAIK it is perfectly legal to own a transmitter for which you do not have a license, else every person or company with a signal generator would be liable for prosecution! Note that in the Netherlands this was/is not the case, and you have to/had to have a license to own any transmitting equipment.

However using the transmitter for transmitting without an appropriate license invites an unlimited fine and up to 2 years in gaol (according the the WT act of 1949) - this is from memory.

As others have replied, it is a cesium beam atomic clock. Of interest,
the clocks used in the GPS satelites are actually set something like 1
part in 10^8 fast (higher frequency) to compensate for the time
compression (relativity effect) of the satelites being in motion at a
substantial velocity!

>MHz???

They're on 10.0 MHz because they *say* they are on 10.0 MHz. Since
they *are* the legal standard, whatever they say is by definition true. They
could be using a drifty old Hartley VFO to establish what 10.0 MHz
is, and we'd have to go along with them, and recalibrate our equipment
to agree with them. But they don't.

The international standard meter and the international standard second
are defined in terms of the frequency and wavelength emitted by Krypton-86
during a particular quantum transition state. Since time and frequency are
reciprocal, this is the ultimate frequency standard. To keep Krypton-86 in the
particular quantum transition state is difficult, so a different atomic clock
based on a cesium beam is actually used. NIST maintains the official cesium
beam standard in their Boulder lab. WWV uses cheaper commercial cesium
beam atomic standards (three of them) to act as working standards for its
transmitted signal.

The frequency of any of these standards is precisely the same, because they
are based on a quantum state transition, and that is absolute. But the phase
offset between the master standard and a working standard can vary. NIST
uses several methods to minimize this phase offset. Currently, the offset
is maintained to less than 100 nanoseconds, IE less than 360 degrees at
10 MHz. So WWV could be displaced in phase by nearly a full Hertz from
the primary standard at any given moment.

For most uses, that doesn't matter since we only care about frequency and
not phase agreement with the master. And varying propagation will, of course,
displace phase more than that, so your received signal can be offset from the
master standard by more than 360 degrees (but realize that for a sinewave,
once you pass 360 you start over, so the sinewave can't ever be more than 360
degrees offset from the master, and thus will always be the same frequency).
But time ticks can be delayed more than 100 nanoseconds from the master,
so a time accuracy of 1 part in 10E8 is as good as we can get using WWV,
and it'll usually be worse, on the order of 1 part in 10E7 due to propagation
variances.

(Precision and accuracy are two different things. We can keep time to a much
higher precision than 1 in 10E7, but our accuracy, our agreement with the master
clock as to when a particular second begins, won't be better than that.)

That's probably about as clear as mud. Go to the horse's mouth for more details, www.nist.gov.

Or go directly to www.boulder.nist.gov/timefreq/pubs/sp432/s_ctrl.htm for the specifics of WWV's relationship to real time.

Your new Ford may have a battery with a weak cell or may have a
bad diode in the alternator (just because they're new doesn't mean
that they can't be bad). Also check to see that the negative strap to
the frame has good continuity, it may have paint under the bolt head.
Even a fraction of an ohm here can cause a nasty ground loop. This
latter is the most likely culprit in a new vehicle.

From: NE7X <NE7X@amsat.org>
Message-ID: <34DB5949.44FA@amsat.org>
Source record: 154291

In the IC-756 configuration setup menu there is a user configuration parameter to either turn on/off a IC-735 inter-tie connection via the CI-V buss between the two radios. The IC-756 user manual has no reference to this configuration, including functionally or hw/sw configurations. I can only assume this is some sort of master/slave operation between the two radios.

Is anyone using this, and if so, what advantage is there in doing so?

Will other ICOM radios work besides the IC-735 if their CI-V hex buss address is set to the IC-735 value (UX-14 dip switches) on the CI-V buss?

Sorry, but this just isn't so. The definitions of time, frequency and length are now based on atomic measurements that anyone can make and apply, and get exactly the same answer. The days when the standard meter was a bar of platinum in a French vault are long gone.

I have one of these also. It is a good radio. I've been using mine as a mobile remote with my HT. I also have been using it as a base in the house. It's been on 24/7 for weeks and has been workin' fine. I have only one concern (it's not a problem, though) that pertains to the fan: The radio can be setup to either run the fan continuously or for two (2) minutes after the LAST TRANSMISSION. Because this is a mechanical part, I'm wondering how long until the fan fails. The radio is enclosed in a large heat sink, so I sometimes wonder if the fan is even necessary.

I almost forgot. The other nifty feature is that you can run separate external speakers for each band (2M and 70 cm) which is nice. I would like a way to disable one or the other VFO's though.

Any CI-V buss radio can be slaved to any other. The IC-735 is special
in that it uses fewer bytes in the header than later model Icoms (the
protocol was changed after the IC-735 came out). So if you have a
IC-735 on the buss, you have to set all the other radios on the buss
to IC-735 compatibility mode. That's what that menu setting is all about.

You can arrange any combination of CI-V buss radios to be master or
slave. So you can slave any of these radios to any other, you don't need
an IC-735 on the buss at all (in fact you'd prefer one not be on the buss
because then you have to operate in IC-735 compatibility mode, and some
CI-V buss commands aren't supported in compatibility mode). But
typically you'll have a computer on the buss running some sort of rig
control software and acting as master with all the radios acting as slaves.

One common use of master/slave is track tuning for satellite operation.
You can slave a IC-275 to a IC475, or vice versa, in order to operate
Mode B. Or you can slave them both to a rig control program running
on a computer interfaced to the buss. This is the better way because
the computer can calculate doppler compensation during the pass
and apply it on the fly.

Another reason you might want to master/slave a pair of radios is
that you can use one for spotting while you work a station with the
other. Then with a single button press, you can transfer the spotted
frequency to the working radio and snag the next guy while your
spotter tunes for another. That's handy for multi-multi contest
operation.

Icom doesn't document how all this works very well in their user
manuals. There is a separate manual available from Icom explaining
the CI-V buss in better detail.

Why because it's a better performing radio-dedicated to one band and optimized for that range of frequencies. An even better route would be a quality transverter combined with a quality hf transceiver as the if-more $$, cables, and general monkeying around though. 73-Brian K3USC-Erie,PA

574. Re: TS-930SAT pricing?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-06 00:00:00 UTC
From: Tom Repstad <rcc@together.net>
Message-ID: <34DB3CC2.F1556F78@together.net>
Source record: 154302

I recently purchased a used TS-930SAT.. it's an excellent rig... $800-$900 is typical cost for a 930 in very good condition, i managed to get mine for $750 + shipping (no mic though). Even though it has an auto-tuner, I find I get better SWR with an external tuner, and auto-tuners will not tune the 160M band... but it performs really well... excellent speech processor for the mic, variable cw bandwidth without a filter (600hz).. I like cw so I'm going to get the 250hz filter one day... but it is not a real necessity. I has lots of features that make it a really good rig. The 900 series by kenwood is thier top of the line HF rigs... with all the bells & whistles available at the time.

Yes, it can. No hardware modification is necessary, you simply need to push and hold SQL and BAND, then power up the radio and hold SQL and BAND buttons down for 5 seconds. All the segments on LCD will show, and radio will receive as far as it's PLL will lock. And yes, it will cover 800 and 900 except the cellular band. To answer (somebody's) next question, no, it cannot be modified to receive cell frequencies!

I disagree. First, web access is as close as your nearest library (which will probably contain amateur radio-related books - bursting with answers to practically any radio-related question). Once one discovers the radio web pages, they'll know where to look when any future query plagues them.

Also, if one only has email access, all the answers to one's questions can be found via info@arrl.org, the ARRL email server.

I'll echo Mike's "Teach a man to fish..." sentiments.

Hello Everyone,
I have for sale a Yaesu FT 109RH 220 Mhz HT. Radio and accessories are in excellent condition. Selling because there is no 220 activity here. I bought this for when I was in New Jersey on year long project. The accessories are listed below.

FNB 4 12 vdc @500 Ma. This battery allows the radio to do 2.5 watts, is in need of a rebuild. Holds a charge for a day or so.
FNB 4 12 vdc @750 Ma. This battery allows the radio to do 5 watts, brand new, not much use on it.
Tone Board. Installed in the radio, permits encode and decode.
Mobile battery charger/battery eliminator. Runs the radio off of 13.8vdc while charging either battery.
Speaker Mike. Seldom used.
Wall charger for both FNB 4 batteries.
Stock rubber duck
Antenna Specialists Mobile 220 Antenna, coil.
AEA 220 Hot Rod telescoping whip. Works nice!!
Carrying case
Manual for the radio.

I'd like$225.00 for everything. Shipping is on me. I'll ship promptly upon receipt of a cashier's check or money order. If you have any questions, please don't hesitate to drop me a line. Really want to put this in the hands of someone who can use it.
Sincerely,
Ed Hutton N3KEX

>Lou..

Lou et al.,
My qsl.net home page has a subpage entitled "Online Swaps". Try
clicking there and you'll get quite a list.
As always, I'm open to changes, deletions, additions, and comments on
that or any of my pages.
Hope this helps.

I also have some new in the package MRF421 matched pairs that
I would be willing to let go for $50.00 per pair. Also, some
singles at $20 each.

From: les@ripco.com
Message-ID: <6bed03$4lk$1@gail.ripco.com>
Source record: 154361

Hi...
I'm looking into getting another scanner (H-H) that will allow full coverage, plus diff modes. Since an AOR will probably not appear soon, I'm willing to give my mag lens and pencil solder gear get a workout.
I figured Rat Shack has several models to tinker with, but from what I see, most mods are for 2004/5 units....like mobile-mounts flavors.

Does anyone know good refs for H-H scanner mods, or an FAQ area to continue looking, before buying a set??

626. Re: ** Making a FT747GX legal again **

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-06 00:00:00 UTC
From: G.Milligan@Sheffield.ac.uk
Message-ID: <G.Milligan-ya023080000602981124150001@bignews.shef.ac.uk>
Source record: 154364
Cross-posted to: rec.radio.amateur.misc,uk.radio.amateur,rec.radio.amateur.equipment

In regards to my earlier question asking how to safely reverse the general coverage TX modification on a FT747GX, I would like to thank the following people for their responses:

DAVE N1PPP
Harry KB6CGGO
Richard G4BLT (nice to hear from you again)
David, N8DO
Tim, K8TJ
Alex G0RAH
Monty N5NVM
Chris G4MYB
Tim Hynde

To summarise, quoting Chris G4MYB

>You don't need to reconnect the wire.

>To get out of general coverage mode,

>1. Set frequency to 12345.6 kHz.

>2. Turn radio off, then on again.

>The GEN indication should have gone off, it's back to amateur-bands
>transmit only.

I have now confirmed that this modification works, thank you.

And quoting Monty N5NVM

>Yes. It's a loop of wire which emerges from the front panel and goes
>right back into the front panel. I think it's brown and toward the
>left side.

Does anyone know what this wire actually does?

>I don't think you even have to turn the rig off, just re-connect the
>wire and the "GEN" indicator goes off. This tells you the general
>coverage transmit is gone. You may need to reconnect the wire
>then turn the rig off and back on. But it's way easier to undo the
>mod than it is to do the mod in the first place.

>After this, if you try to transmit out of band, you get an "Error"
>on the LCD panel.

It was interesting to note, the number of people asking me why I wanted to reverse the modification in the first place. If I could qoute David, N8DO

"At least in the US, it is legal to own a radio capable of illegal transmission, as long as you don't transmit illegally."

I have always thought that in the UK, you were not allowed to own a transmitter that you are not licenced to use, as an interesting sideline the FT747GX
in its "legal" mode can transmit within the ham bands in 500Khz blocks for example the 40m band you could transmit between 7.0 - 7.5MHz although in the UK we are only allowed to TX between 7.0 -7.1 MHz.

On another note what is the position of a Class B user (using a HF rig with a transverter for VHF/UHF use?) in the UK?

Or even a SWL using it without a microphone to transmit with?

And for my final... I have obtained from the net a Apple Macintosh based Hypercard prgram which will allow you to control the FT747GX using the CAT system, if anyone who is interested in a copy of this software please let me know.

73's

> What method does WWV National Bureau of Standards use to calibrate there
> equipment to insure they are transmitting on 10.000.000 MHz and not
> 10.000.001 MHz? What is the final source of sources of true 10.000.000
> MHz???

The short answer is that they use atomic clocks, principally cesium beam standards, to keep time. A second is now defined as:

9,192,631,770 periods of the radiation corresponding to the transition between the two hyperfine levels of the ground state of the cesium-133 atom.

See http://www.bldrdoc.gov/timefreq/pubs/sp432/s_ctrl.htm for more information on how WWV keeps time and frequency.

Source record: 154182

Hello and thanks for reading my posting..
I have a good Kenwood TS-790A Triband Allmode for sale.
It has 2 meter and 440 bands at this time but you can add the 1200mhz band.
It is FM, CW, USB and LSB.
Also has the CTCSS encode, decode chip installed, and will crossband repeat.
I have owned this rig for 5 Years and never talk sideband or use the sattelite
functions on it. It is just too much radio for what I need right now...
I paid $ 1,700.00 for it but am only asking !,300.00 and I pay shipping to you.
I think I would trade it for a BIG HF AMP like an Alpha or Commander 2500.
Thanks for reading this and Happy Hammin'

644. Dualbander--Icom, Kenwood, or Yaesu?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-07 00:00:00 UTC
From: Bill_Combs@macgroup.ORG
Message-ID: <0560.199802062059.00DD5198@macgroup.org>
Source record: 154183

I am looking for a dual bander that can do crossband repeat and so I am looking at the TH-79A, the W32A, and the FT-51R. Both the Kenwood and Icom seem to be similarly priced right now, probably $100 less than the Yaesu. I wonder if any one has any comments. I understand the Icom has an automatic squelch, whatever that means, as well as a battery voltage indicator, which I like. I wonder how helpful that is in actual practice in telling when the Nicads get low. I understand the kenwood is being phased out, but I don't know why.

652. For Sale: GE Mast II

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-07 00:00:00 UTC
From: Big_Red_One@Juno.com
Message-ID: <34dbf6fe.38483777@news.bright.net>
Source record: 154191
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,oh.forsale,us.forsale.misc,us.forsale.d,misc.misc,us.misc

For Sale

GE Master II radios 144 to 160 Mhz.

Some have PL encode/decode 100.0/146.2

50 Watt transmit .5 uv or better receive. (ALL WILL BE CHECKED BEFORE

THEY LEAVE HERE THERE WILL BE NO DUDS).

Some may come tuned in the ham band as I have done this to a few to make

shure they work well there.

Currently on Goverment frequencies but tune to 2 meter ham verry easy.

Each package contains:

One radio.

One control cable.

One control head 8 channel.

One microphone.

One speaker.

One transmit/One recive ICOM without crystals.

One PL incode/decode board and hook switch as available.

If you buy 5 or more (limit 25 as that is all I have) you

will receive a compleat service manual.

The cost is 75 dollars plus shipping FIRM!

Crystals can be installed for one frequency tx/rx for 40 dollars.

You are responsible for any additional ICOMs and crystals as there

are not enough to do more. If you order the one channel installed

you must wait 4 to 6 weeks for me to order the crystals from my supplier

and them to ship them to me. The time can be shorter but the

supplier raises the price to me and I to you.

If you want to order your own crystals and install them your self

you can order them for 10 dollars each (20 dollars a pair 1 tx / 1 rx)

from:

Hy-Q International

1438 Cox Ave.

Erlanger KY. 41018

606-283-5000

COD or money orders only no credit.

DO NOT buy JAN or BOMAR crystals as they are shipped off frequency

and usualy fail within 6 months.

Any repeater mods you want are up to you to do.

All orders and shipping are to be handled through Rich KA8CMK at Big_Red_One@Juno.com

way he want's to do it.

Thank you for your time

653. Re: How important is dual receive on a dual-band radio?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-07 00:00:00 UTC
From: todak@webtv.net
Message-ID: <6bhcjrfrg1@newsd-123.bryant.webtv.net>
Source record: 154192

Using a dual-band radio for crossband operation poses a legal problem when the remote radio transmits to your HT. When you transmit to the remote radio using an HT, you are OK because the remote radio is repeating your transmission and hence your callsign. However, when the remote radio repeats a transmission back to your HT, how does it ID? suppose you turn your HT off and yet the remote radio keeps on merrily transmitting any communications it receives? How then is it to transmit your callsign (since it is your radio being used under your station license it must transmit YOUR callsign at 10 minute intervals) ? You should get some sort of auto IDer on the remote radio before using it for crossband operation.

No. To run FSK you need a separate RCA connector from the
RTTY connector in the back of the rig to the TNC, which will
key the rig. Then FSK mode works on XMIT.

Hi Gang - I have a (sorta) similar question. I plan to keep my FT-50 continuously connected to 12 VDC in the car. It appears that any attached battery will be charged continously if I do this. So, decided to use the FBA15 battery case (without the batteries installed) to basically give me a "rear cover" for the radio.

However, does anyone feel the batteries act as a surge dampener, line filter, etc. and would I be risking damage if I connect to 12 VDC in car without a battery attached?

Thanks... Dan N3DW (Indianapolis area)

Yes the 730 does have a good front end. It is amateur band only so you won't find it something that has been broadbanded to receive everything from dc to daylight. There is no AT model, there was never a built-in antenna tuner for this rig as well as any other rig of it's vintage (early 80's). I have had two of them and regret ever selling the first! For 80-10 plus WARC bands they make a great rig!

Source record: 154206
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

I have the opportunity to pick up a Yaesu FT-301D HF rig at a very attractive price. My interests on HF include the 17 meter and 30 meter WARC bands.

The rig does have a "AUX" position on the band switch, and I would be (reluctantly) willing to give up 15 or 20 Meters. Also a JJY/WWV is on the band switch.

Anyone ever successfully get a FT-301D/S to work on 17M and 30 M? Just a mixer xtal change??

Any constructive input would be appreciated.

Thanks

671. Repeater Questions: Help!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-07 00:00:00 UTC
From: Mack <kf4mir@panama.c-com.net>
Message-ID: <01bd33f8$adb3f540$97835fcc@dialinxx.phoenix.net>
Source record: 154210

I am looking for some advice on setting up a repeater. I am in the Republic of Panama and we have three repeaters, two of which are pretty old. We have one that is located in Panama City and another that is located in Colon on the opposite side of the canal. I have been tasked by our ham club to set up a committee to replace some of our older gear. I need help!

The problem is this: We need at least a new controller on the Paciffic side and a new controller and repeater on the Atlantic side. I am not very familiar with some of the newer products and would value any advice I can get.

Some of the features we need in the controller is the ability to link the repeaters, patching capabilities (reverse and regular autopatch), messaging storage, and memory storage of emergency numbers. The repeaters should be continuous duty cycle and have methods for operation on backup power as we lose electricity regularly here during rainy season.

These repeaters are about the only reliable form of communications we have in this country, and we need to upgrade the older systems that we have. The controller we have on the Paciffic side was made in 86 and the one on the Atlantic side is even older than that, 81 I think.

I would like to say thanks in advance for any help and advice I can get on this!

672. Yaesu FT900 Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-07 00:00:00 UTC
From: jpoulin@honk.org
Message-ID: <886877856.1891958788@dejanews.com>
Source record: 154211

I have a friend who has an FT900. He asked me to post the following questions to this newsgroup.

1) His ANT connection on the back has continuity between the center and ground. Is this normal? This radio does have the built in tuner.

2) Does yours have continuity?

3) Does your FT900 get extremly warm even when operating with LOW Pwr in all bands?

Any responses would be appreciated.

Thank you

673. IC706 & D104 Silver eagle

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-07 00:00:00 UTC
From: jpoulin@honk.org
Message-ID: <886878317.1908998151@dejanews.com>
Source record: 154212

Hello,

I have just purchased an IC706. I find that the stock mic is ok, but I really need to wire up a pre amplified desktop mic.

I do have a silver eagle that I can use, but these mics have a very high impedence.

Has anyone ever hooked up a D104 Desktop mic to an IC706 ?

I noticed that the ICOM Desktop mic for this radio is rather expensive.

Any ideas ?

Thanks

Hello,

I have a Yaesu FT-8000 for sale. Original packaging and manual. The Tone Decode board was installed with the radio as new. No cosmetic blemishes, and I am a non smoker. Was used for 5 months. I just need some cash towards an FT-990.

I would like to get $375 considering the tone board and good condition... ...but e-mail me and we will discuss price.

thanks -- Adam

675. ICOM 706MKII Questions

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-07 00:00:00 UTC
From: Richard Jellicoe <gstar@vzinet.com>
Message-ID: <34DCB799.C9C60C22@vzinet.com>
Source record: 154214

I am planning to buy an ICOM IC706MKII for my father for his birthday. Since I know little about ham radio's I am asking the group for some help here.

I understand that the radio will need two antenna's, one for 144mhz and one for 50mhz and hf bands. What is a good antenna for the 50/hf bands, I would like to get something really small so he can drive into his garage.

Do I need to get the AT180 antenna tuner, if so then what type of antenna to I need for that??

What other options do I need to make this a complete mobile package so my dad does not need to buy anything eles??

Any help with this would be helpfull

Richard

I've been out of radio for many years, and it's time to sell all my old treasures.
For Sale:

* Complete Yaesu FT-101E station, with extra 11 meter mod, AM filter, FV-101B external VFO, and YC-601 Freq Counter. All is perfect except the counter stopped working for some reason.

* Yaesu and Standard 450MHz business band tranceivers, with CTCSS boards.

* Ritron Responder 10 watt VHF repeater with factory phone patch and handheld radio w/ dtmf pad.

* 2 Johnson Viking Rangers, with PTT. One is completely rebuilt and very trick.

* Johnson Courier KW amp for the Ranger.

*** For enough money, I might part with my vicious Johnson Viking Valiant or my Johnson Viking 500!

* National NC-300 receiver.

* Collins 390A receiver.

* Golden Falcon 400 mobile amp- custom flip-top case, backlit panel meter, etc.

** 2 classic Hy-Gain "Footlocker" mobile amps, one with custom remote control head.

* Nice, short equip rack for above with military slide-out drawer slides.

* Miscellaneous old radio gear like Johnson transceiver tester, Diawa CN-720B pwr/swr meter, some Johnson parts, etc.

* 2 very nice Panasonic 49 MHz 2-line cordless telephones with speakerphone, speed-dial, etc.

** Cobra 148GTL with DigiScan unit, Cobra 129LTD.

I'm in the San Fernando Valley (Los Angeles), California area.

691. Passed Novice Today -- Please Advise on Rigs & Books

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-07 00:00:00 UTC
From: e-boxholder@webtv.net
Message-ID: <6bipkf$57m$1@newsd-144.iap.bryant.webtv.net>
Source record: 154230

Hi All,

I just passed the Novice test today and I was wondering if some of you would give me some input / info. / advice on rigs and ARRL books.

Rigs --
I would like to get some info. on QRP rigs and how to adapt them for backpacking. Info on kits / plans for transceivers, baluns, antenna tuners, antennas, keyers, etc. for the backpacker would be great. Anyone know of any good books or clubs?

I hope to upgrade to Tech. Plus next month. So, what would be a good, **_tough_** , light-weight, 2m or 2m / 440 HT that I could use for backpacking. If you have any suggestions on what features & options I should look for, please let me know.

Books --
I have an ARRL catalog and noticed that they have several different booksfor certain topics (2 books on QRP, several books on antennas, several books on ham radio for the beginner, etc). I can't afford them all. :-(I would like to correspond with someone, via e-mail, who knows the content of some of these books and who might be able to tell me what books are the most comprehensive, what books would be good for beginner, intermediate, and advanced hobbyist, etc. That way, I won't get something that is over my head and I won't have two or three books that say the same thing two or three ways.

Feel free to e-mail me or post a reply if you can help me out.

Thanks in advance,

-- Chuck (waiting for my callsign)

: (I need them for a _very_ old battery powered radio receiver.)
: Preferably an european type, as so the chance is better
: of finding it in a store. (type code begins with 2 letters.)

The 3Q5 is equivalent to the DL33. It's an audio output pentode with an international octal base. The pinout is :
1 N/C
2 heater
3 anode (plate)
4 Screen Grid (g2)
5 Control Grid (g1)
6 N/C
7 heater
8 heater tap/cathode

I can find no European equivalnent for the 1LN5. It's similar to the 1LC5, 1LG5, CV777 and CV781, though.

It's an RF pentode on a B8B (Loctal) base. I have a single line of data in the manual for my valve tester, as follows :

Pinout :
1 heater+
2 anode
3 screen grid (g2)
4 cathode
5 heater -
6 control grid
7 N/C
8 heater -

It's _possible_ that pins 5 and 8 are the ends of the heater, and pin 1 is a centre tap. I don't think so, though

The test data is :
Heater voltage 1.4V
Anode voltage 90V
Screen voltage 90V
Anode Current, 1.6mA at 0V on the control grid
Mutual Conductance 0.8 mA/V

: Many thanks, Peter

-tony

Hello all,

I have a friend in Russia, UA0ZC (Valery Makarov) who has
acquired a Kenwood TH-7K radio, but is lacking the instruction and
spec sheets for it.

Does anyone have one they could copy?

Also, he is seeking a gain antenna for it (rubber duck
style) - I have seen 2.5 db gain antennas from Larson
for such 144/440 radios. Any ideas? Anyone have one
for sale I could send him?

Any help appreciated - he is in a remote village of the
Kamchatka peninsula and has almost no access to such
things.

Many thanks,

Dave WB7AWK

>like. I wonder how helpful that is in actual practice in telling when the
>Nicads get low.

If you watch the battery voltage frequently and learn its pattern, you
will eventually have a pretty good idea of how much charge is left in
the battery. I think this is quite valuable. On my FT-50, I usually
have the right side of the display showing battery voltage continuously.

You can't do that with the FT-51. However, it *will* read battery
voltage with two keystrokes plus possibly turning the knob. So you
can still check voltage.

I don't know how the Icom compares.

Dave

706. KI0DZ SWAPS PAGE Updated

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-07 00:00:00 UTC
From: ki0dz@juno.COM
Message-ID: <19980206.170953.6670.0.ki0dz@juno.com>
Source record: 154329

The past couple of days' activity concerning online swaps enabled me
to update my Online Swaps page. In the process I was able to check on
links already listed to ensure that they were still current. Two days
ago my page had 11 links to online swaps. Today it has 15.
ALSO, I have made my page more readable by listing each link by NAME
instead of ADDRESS (which tends to look messy).
In addition to links to online swaps I also list one REFLECTOR and two
USENET groups that enable amateur radio operators to buy and sell used
equipment on their own.
Thanks to everyone who e-mailed me with their list of favorite swap
places. Without folks suggesting links, my page would NOT be what it is
today.
Feel free to drop by and see the improvements. Most of all, please
use the page when you are "in the market". My general qsl.net address is
listed in my sig file. Or you may go directly to the swaps page at
http://www.qsl.net/ki0dz/swaps.htm .

Source record: 154083

I bought one on Saturday and I was gonna post some report here.

I don't like the finish of the radio. It looks cheap...cheapest of all ICOM radio has been made. The radio is construct using CNC billet aluminum.
Ni-MH is standard. The one I have is 6.0V 700mAh. Very thin battery.
The unit is smaller compare to the IC-T7A but the antenna is way too long. The radio is 4" tall but the antenna is 8" and not flexible enough to carry around on your belt.
They will not have the high power version out until next 3-4 weeks. The standard battery only give out 2 Watts. Sensitivity is good in all bands. Scan speed is the same as IC-T7A. Most functions perform exactly as the IC-T7A.

HERE IS THE NICE PART...

Press moni + band while power up the radio gives access to air band, 300 MHz, and 800 MHz. Instead of 50, 76, 144, 440 band, we get 50, 76, 118, 144, 300, 440, 800 band. Cellular image can be heard CLEAR at around 795-825 MHz.
The unit also have 30 kHz step.
I don't have time to take the radio apart so I don't have mod for out of band for now. I'll post more later.

Hope this helps

717. Kenwood TH-205

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-08 00:00:00 UTC
From: rexstout@ptld.uswest.net
Message-ID: <rexstout-0802981048340001@adialup41.ptld.uswest.net>
Source record: 154091
Cross-posted to: sci.electronics.repair,rec.radio.amateur.equipment

After assuming my TH-205 was dead(and before I can get my license! ARGGHH! Soon, though...) for a few months, I just dug it out and was playing with it. Well, no battery(although I do have the auto adapter and it works well with 9V's and the batt pack from my Pro-60) and no sounds. At least I got a good antenna out of the deal($35). But wait! The sounds is almost back! Still somehwat sporadic, but I THINK I have it tracked. OK, when you take the cover off, you stare at four switches/pots. When I tapped on the low/high power switch, the sound suddenly came back(and loud, since volume was all the way up)! OK, on to the questions.
First, why would that switch make the sound go away?
Second, how do I fix it(permament fix)? Does it just need a good cleaning(if so, how do you clean such a small boxed in switch?), or should I replace it(where do I find a replacement part)?
Third, where is a cheap source for the newer rubber PTT switch cover, and a battery?

>

I have had a FT-51R for a few weeks now and like it much better than the
others mentioned. I have not had much time with the TH-79A but have used
one for a while, The W32A is a good radio but I can't use it all day like
the FT-51R. I have the 9.6v 600mah battery and it lasted 8 hours with about
15 min TX on L3(the setting below HI). It also has the voltage meter and I
have found it to be worth it's weight in Gold. When it reads in the 9.9-9.7
range I know it will give out in about an hour with on TX, or in just a few
mins. with TX. The Ft-51R has x-band repeat but I have not used it. I
generally use the mobile rig to x-band(Yaesu FT-8100R).

You wont go wrong with any of the three. You can save a little money but in
my opinion at loss of TX time. Also the FT-51Rfeels the best in my hand.
This is only my opinion but I liked it the best.

hope this helps.

If it is a new radio, I would take it back to the dealer.

If it is a used radio, it looks like someone got into it and started
tweeking. Maybe that is why they sold it.

Unless you are familiar with the radio, I would suggest taking it to a
local, dependable, dealer and consider the realignment costs as part
of the purchasing cost.

726. Re: IC-775DSP or FT-1000MP

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-08 00:00:00 UTC
From: STEVEN L UMBACH <N9ROU@prodigy.net>
Message-ID: <6bkq8ojli1@newssvr07-int.news.prodigy.com>
Source record: 154134

They are both great rigs. I own the FT1000MP. I went to AES in Milwaukee and tried both rigs on the same antenna, etc. I was willing to spend the extra dollars if I felt the IC775 was a better rig, but I felt that was not the case. I would have bought the FT1000MP even if they were the same price. They both have very good receivers. Early Icom 775's had IMD problems in their receivers - AES had FOUR of them sent back that they were trying to sell as demos when I was there spring 1997. The FT1000MP was designed to have a very high second order IMD intercept point which QST confirmed in their review of the rig. It was about 30db better than the IC775 in this respect. This may be important to you with all the high power sw stations over in your part of the world. I like the filter bandwidth selection setup on the FT1000MP much better than the IC775 which has three itty bitty buttons on the upper right side of the radio to do it. The FT1000MP has a separate s meter for each receiver, which the IC775 does not. The 100 versus 200 watt power rating makes no difference to me because I have an amplifier if I need more power. Going from 100 to 200 watts alone will make virtually no difference on the other end. Both rigs have plenty of sockets for optional filters. A lot of world class dx stations including ON4UN are now using the FT1000MP also. I am sure you will get a lot of opinions about this. My suggestion - buy an FT1000MP and an Ameritron AL80B for about the same price as the IC775.
Good luck. ---- Steve N9ROU

For sale ****** $750 USA Wg Condition /new $1990/

2.Wavetek Satellite Receiver Test Set model 1470
********* 850$ Very Good Shape /new3100$/

Specification:
Avcom Portable Spectrum Analyzer PSA-35A
RF input 10-1750 Mhz
RF input 3.7-4.2 Ghz
LNA/BDC PWR +18VDC on RF Inputs
Referance Level 0-(-40)dBm
5-slide band select 0-500,270-770,950-1450,1250-1750,3700-4200
6-Preset frequency band
span 0-50 MHz/DIV
scale dB/DIV 2db and 10 dB
Line and Bat operat

Frequency Coverage 10-1750 MHz 3.7-4.2 GHz
Basic enough to begin with - sophisticated enough to grow with .
Ku and C band compatible
Built-in DC Block and Power for LNA's and LNB's
Accurately measures wideband signals commonly used in the satellite
communications industry
Lightweight (17lbs.) and Portable - Ideal for Test Situations
Rugged, Attractive Styling
Made in the U.S.A.
New Priced
at /$1,965.00/in http://www.fotronic.com/avcom/psa-35aspecanal.htm.

Troubleshoot system problems by observing output signals from LNA's,
BDC's, Line Amplifiers and Splitters, and other RF signals components.
Measure block system signals balance.
Identify and resolve terrestrial interference problems quickly
and precisely by displaying offending signals on the PSA-35A.
Customers can be shown the nature of TI problems for clearer understanding.
Measure and document satellite communication system performance after
installation or service. Customer should be given a copy of results per
AVCOM'S SASAR (Spectrum Analyzer System Analysis Report) to insure
customer confidence and satisfaction.

Progressive Satellite Communication Dealers, Repair Centers,
and Manufacturers will find AVCOM'S PSA-35A Spectrum Analyzer
to be an indispensible instrument for rapid testing and alignment
of satellite equipment. Problems that might otherwise take hours,
even days to resolve, can be identified and corrected in minutes,

saving time and money, while reinforcing customer good will.
An AVCOM Spectrum Analyzer will pay for itself quickly.
My price **** $950 USA

Specification : Wavetek 1470 Satellite Receiver Test Set**

Wavetek Satellite Receiver Test Set model 1470
Subcarrier frequency 0-9.999 MHZ /A,B/
Audio Pre-emphasis off,25-75 us /A,B/
Audio Modulation (Hz) 400,1K,1,5K, ext,int (A,B)
Subcarrier Select off,A,B,Disc,Mtrx
Output Level (dBm/75ohms) 0-70 and 0-10calibr
Mode(Video or Sweep), Center Frequency (45-95)
Sweep Width
Markers (on-off) A,B,C,D,E
Video -(Source-Ext,Int)(Chroma on,off)(Dispersion on,off)

729. IC-706 for Marine HF SSB?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-08 00:00:00 UTC
From: Paul Unterweiser <Xmind_games@earthlink.net>
Message-ID: <34DDF0C0.1E79@earthlink.net>
Source record: 154137

I'm seriously considering buying either a used IC-706 or the new MkII to be installed on my sailboat. Something I was told (more than once) was that the IC-706 can be "programmed" to transmit outside the Ham bands... Since space and money are always a consideration, the thought of having a xcvr capable of transmitting on one of the marine emergency or USCG freqs -during times of emergency- is very attractive.

My question is this... how do I "program" the 706 to transmit on say 2182 kHz?

Paul

Source record: 154145

Hi- I bought the FT8100 and FTS22 tone board just recently and
was looking to install it. But on p.62 of the owner's manual, Yaesu
mentions an area where you can install the board, but it isn't very
clear as to exactly where that area is. As I open the top of
the radio, all I see in the area they mark is a lot of SMDs. Are
they referring to using the doubel-sided tape on the board to attach
it to the top cover near the pin connector?
I want to be kinda sure about doing this before mounting the radio
in my car...please respond directly to ka3jjz@erols.com
(Note: calls and emails to Yaesu have gone unanswered- even their
new email site for FT8100 support has brought me no answers)
Thanx es 73s Mike

738. P.C. Magazine Advocates Breaking The Law

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-08 00:00:00 UTC
From: n2tkx@aol.com
Message-ID: <19980208191901.OAA03833@ladder02.news.aol.com>
Source record: 154146

The following is an exerpt from an article that appeared on page 48 of the March 1998 issue of POPULAR COMMUNICATIONS magazine:

"On the other hand, there are some operators who have been anxiously anticipating the arrival of Solar Cycle 23. It is particularly good news for SSB operators who participate in the Freehand; that segment of frequencies between CB channel 40 and the 10 meter amateur band. For them, increased skip opens numerous opportunities for long distance (national and international) communications. In the very near future, though illegal, Freehand operation will be better and more exciting than it has been for years!

As surely as Solar Cycle 23 is underway and as certain as the increased skip and noise levels it brings will drive many of you from your radios, at least some of you will be tempted to experience the intrigue and excitement of the Freehand. If you do, remember ... it is illegal! Also, remember that while illegal, it has rules. Further, you should learn and then comply with these rules. If you don't, you could find out that poor operators have a tendency to 'get caught.' If you do learn and follow them, you should soon find yourself enjoying hours of stimulating radio. The following letter is offered in hopes of getting those 'who will' off on the right foot."

The theme of the article seems to be "it's illegal, but here's how not to get caught." Give me a break! I don't think that there's anybody who believes that everyone who operates CB obeys 100% of the rules 100% of the time. But a major magazine advocating the best ways to break the law and not get caught?

By the way, here are a few contact points:
Ed Baranat, edbarnat@global2000.net, author of the article.
Harold Ort-N2RLL, PopularCom@aol.com, editor of POPULAR COMMUNICATIONS.

Tom Kneitel-K2AES, k2aes@juno.com, Senior Editor of POPULAR COMMUNICATIONS.

What brand of radio?

Without knowing the specifics I can only make broad suggestions.

Does the final heat up? I'll assume you were running the unit into a dummy load for testing and so I wouldn't think if the unit has VSWR protection that it would be kicking in due to problems at the antenna. If the final is getting abnormally hot then some type of thermal protection is kicking in to reduce the power output. The same may be true if there is a provision for detecting abnormally high VSWR. The protection circuit is kicking in to reduce the output power in order to save the final. Its possible something in the protection circuits is failing.

I'm assuming the warranty is up or you woulda just sent it for service. If thats the case and you feel comfortable opening up the unit I would suggest a close inspection starting from the antenna connector and working back to all the components in the area and on the board where the antenna wire runs. I would look at the PC board traces and components for signs of overheating. IF the problem is thermal then spraying some component cooler on each component in the area may help you isolate the problem part. If something is burnt or melted its probably bad. The thing is that just finding the bad part and replacing it won't always be the happy ending. You also have to ask yourself why that part overheated in the first place. If you don't find a cause for the failure then simply replacing the part will be a temporary solution at best.

Good luck.

>post will have a different opinion based on their experience or lack
>thereof. If you live in a fairly well populated area with several repeaters
>you will probably buy an HT. I recommend a dual band HT with a GOOD antenna
>for the house and car.

I would suggest the new Novice work on upgrading to Tech Plus or look for a
good 220 radio or both. As long as he stays a Novice, the "standard"
dual-band radios won't do him a lot of good as he doesn't have access to
either 144 or 450 MHz.

If I were him (Lord, how I wish I could go back and do it all over again!
:), I would get a little 40M CW rig (the small MFJ transceiver comes to
mind) to not only experience the thrill of world-wide communication, but to
get my code speed up to 13-15 WPM. At the same time I would get some
decent Technician, General and Advanced Class license manuals (I personally
like the ARRL editions).

Right now, with his Novice license, the Technician written exam is the only
thing standing in his way to full VHF/UHF operating privs. Once he works a
few CW QSOs he will quickly find his code speed increasing to a point the
13 WPM code test will be a piece of cake. Then it is just a matter of one
or two written exams to full General or Advanced privs.

I would like to add my Congratulations for passing his Novice license and
pass on my WELCOME to this great hobby.

Dave:

"Transceiver" means, Transmitter, and Receiver. This term can apply to base units, mobile units, and hand-helds, (or walkie-talkies). If the frequencies are the same, it doesn't matter if it's base, mobile, or hand-held, they will talk to each other.

Paul

Check out MODIFICATIONS for 706. Try searching on the WWW or you can buy a book called Radio / Tech Modifications published by "ART SCI" URL www.earthlink.net/~artsci.
Be aware that modifications void the type acceptance for the radio by the FCC. Be advised that since the radio was designed to operate in the amateur bands it is tuned and optimized to operate their and may not give you the performance for "out of Band" operation. The Receive sensitivity or power output may not be what you want for operating in the marine band. Just make sure when you do the mod, do it so you can return it to the original condition and have some one bench test it for where you want to operate. Also ask around on what performance people expierence with modifications to the 706.

Joe

>
>Jeff KN6GI

Hi Jeff,

I've been plagued with the same problem - let me elaborate:

My 727 transmits just fine but also has open squelch unless turned all the way clockwise. In the beginning, leaving the radio turned on for about 20 minutes, the problem would dissappear and work perfectly. I was able to use that approach for approximately 6 or 7 times. Now however, the radio will not receive anything at all no matter what I do. I have been procrastinating as far as sending it to Yaesu. I find it very interesting that I'm not the only one. This won't help you with your 727 but at least you know your not alone.

Check the battery. Many transceivers open the squelch when the battery
gets below a certain voltage.
Maybe you have a shorted cell.

If the ZZZ does not work then look for a voltage regulator that is
breaking down. If you can identify the regulators then use a can of
freezant on it when the power is down and see if it brings it back
up, or hold the tip of a soldering gun near it to see if it will pull it
down.

If that does not fix it then do the same thing to the RF power device
and driver/drivers.

If that does not fix it I bid $25.00.

Source record: 154173

This can be a problem! You may be able to resolve it by inserting a cheap antenna tuner between the amp and the radio. The best solution is to retrofit the amplifier with a tuned input circuit. Without knowing the input impedance of your amplifier, I can't be specific as to which form this circuit might take.

Remember, the RCI2950/2970 has a relatively dirty output (no tuned circuits). Please CYA and use a suitable low pass output filter.

If you will describe your amplifier (type of amplifiers, configuration, etc) I will send you the necessary information to build a tuned input circuit.

Best regards

> transmitting any communications it receives?

If the remote is doing bi-directional crossband repeating, this is most certainly an issue. One solution that sometimes helps is to set it up for single-direction crossband repeating. For example, say that the repeater you want to hit on 2 meters can't hear your HT from your indoor location, but your HT can hear the repeater. Transmit on 70cm to the remote, which re-transmits on the 2 meter input frequency, and DON'T have the remote re-transmit the 2 meter output back on another 70cm frequency. With this setup, your regular ID's go out on both the 70cm and 2 meter frequencies simultaneously, and there isn't a re-transmission on 70cm that you can't control and can't ID on. Obviously this only works in the situation mentioned, where you can hear the repeater but not capture it with your HT.

As far as the issue of the remote radio re-transmitting junk or someone else's transmissions, I would set up the crossband link with a PL tone at a minimum, and if you have a Yaesu for both the HT and mobile radio, consider DCS or CTCSS paging modes, which will come closer to insuring that the remote radio re-transmits only your signals.

Personally, I wish that manufacturers of crossband-repeat capable radios would add an auto-ID feature. Heck, the FT-50R ALMOST has that feature, and it's not even a true dual-receive radio. (It will auto-send your ID in CW when operating in a peculiar mode where the radio searches for other FT-50's in its range, and since it has to send out an inquiry signal repeatedly, you program in your callsign into one of its memory locations so it can ID legally.) How hard would it be for the radio's manufacturer to add a CW ID feature to a crossband-repeat mobile rig? Are you manufacturers listening???

As a repeater control operator, I try to monitor all three of our repeaters at once, so the dual-receive capability of my FT-5100 mobile rig is very desirable to me. (I have a separate 220 rig for the third repeater. The repeater club's president keeps nagging me to trade them both in for a tri-bander, such as a Kenwood TM-742...) Unlike him, however, I don't try to hold a conversation on 2 or three of them at

once! But even if I am focusing my attention on one band, it's nice to be able to hear the other two in case someone is hacking the system, or having problems working the autopatch, or requires some other sort of assistance. Your situation may not be similar, however.

Good luck in making your decision.

787. HELP with old Kenwood HF Transceiver TS-510.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-08 00:00:00 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <6bjf68$d4l$1@coranto.ucs.mun.ca>
Source record: 154257

I am looking for information on the Kenwood TS-510 Transceiver.
Please email me if you own one, have schematic/service info
or know what year they were made and for how long.

Also want to know what model CW filter it took and if
it's the same as filters used in other model Kenwoods
like the TS-511 or TS-520, etc.

788. Re: W:mods fr Kenwood TH-G71

Date: 1998-02-08 00:00:00 UTC
From: ht <tournier@iprolink.ch>
Message-ID: <34dd1d70.0@news.iprolink.ch>
Source record: 154258

Well,I opened the th-g71 and cut open a green jumper inside,the unit now transmits between 142 and 152 mhz.

Other mods should be possible,involving higher level surgery like removing SM
diodes.

I've had two s-vhs 5000U's in a dub rack for years running maybe

5 hours of dubs a day, with power on 10 hrs a day, working flawlessly

for years. I also own the Brs 378U and Brs 360 U which are industrial
S-vhs machines that use the consumer mechanism. These are awesome
and haven't given me any trouble.

Then again my friends s-vhs 6700? ran well for 2 -3 years then needed

a number of repairs. A plastic gear keeps breaking.
--

If you listen to vhs hi fi on a system capable of reproducing bass, you'l find

most machines (especially Pannasonic) have a horrible 60 hz buzz that occillates

with every word. The JVC are the only machines i've heard that sound decent.

Looking for used RF Network Analyzer and Return Loss Bridge.
Either With Self-Contained RF Source or External Sweep Generator.
50 Ohms input impedance and .01 to 1.2 Ghz range minimum.

Will consider any manufacturer, HP, Wiltron, R&S, Marconi, Etc.

Would prefer R&S Model ZPV with E3 plugin and RLB Bridge.

Vector/Scalar or Scalar only depending on what it is.

Would also consider spectrum analyzer with tracking generator,
and bridge instead of an Analyzer.

We are looking to aquire this equipment for private use, we are NOT
dealers in used test equipment.

Please send your information to E-Mail: pixels_m@phnx.uswest.net
or You can fax the specs to (602) 840-4609.

798. DX70TH vs.IC706mkII??

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-08 00:00:00 UTC
From: radiofreq0@aol.com
Message-ID: <19980208125401.HAA14040@ladder02.news.aol.com>
Source record: 154268

All,
I am looking for comparasons and first hand reports of experiences with these two rigs.
The DX70th seems simple and straight forward. THe IC706 mkII seems to be more complex and ultimatly versatile.
THe DX70th comes standarf with ceramic filter for SSB
the 706mkII has then as iotions.
Apples to apples, that is the 706mkII /optional crystals just how do they compare in every resect as HF units Specifically the HF Rx?
How then also and seperatly from HF performance, do the 6 meters compare, is the 706mkII 2 meter section a good unit when compared to a basic 2 meter free standing rig?
All insights and expereince will be appreciated.
I have heard very good things about the both. I have heard good things about the DX70TH and am very much considering buying one.
However, although the prices are quite different, I would go with the 706mkII if it was was a better choice as a HF rig and the 6 and 2 meters were competitive with the basic rigs out there.
Otherwise, Ild either keep my 735 and get a 6 & 2 meter rig, or get the DX70TH and a 2 meter rig.
This will be for mobile operation.
RSVP
tnx
jeff

From: Charles carolan <ccarolan@pipcom.com>
Message-ID: <34DDC696.ED0@pipcom.com>
Source record: 154269

Hello I have a broblem with my older Kenwood TS 180 S.Here are the symptoms....

On phone the radio deviates from the frequency dialed on the readout by 2-3 hertz during transmit,10m and 15m seem normal in this area.When in CW mode it deviated from the dialed frequency by about 8 hertz when keyed ,although the rig is older this is the first problem I have had with it.

When tested into a dummy load the phone end is normal but the cw mode still acts up,I would appreciate any comments on this as to what the problem could be etc,I have eliminalted all accessories and grounding from causing this problem.Thank you for taking the time to read this request and I would like to thank anyone in advance,should they have the time to reply...73 de Charlie VA3IRL.

Source record: 154270

Wondering if anyone else who has a Kenwood TS-440S had any problems with distorted audio which gets worse with processor on?
1. The rig is about 10 years old and has not been aligned since new.
2. The problem does not appear on AM or FM xmt.
3. The stock mike was tried with same results.
4. Mike used now is KW MC-80
I may have remembered reading a while back another ham stating he had the same type problem. Power, RX, etc is fine and I think it just may need a alignment in the TX section. Power supply being used is 50A peak Antron. Any help much appreciated - Thanks . . . . . .

Hi!

I just got the CEPT-License 1 and I'm looking now for a HF-Transceiver. I've heard and informed me abt the two trx ICOM IC-775dsp and YAESU ft-1000mp.

The only difference I can see is the output power and the price!!! Are these 1000$ more for the 775dsp worth??

What are the differences? Is the receiver of 775dsp better??

Are 200 Watts (775dsp) useful or are 100 Watts enough?

Thank you very much for answer.

Are there internet sites comparing these two devices?

Source record: 154275

e-boxholder@webtv.net wrote
Hi All,

I just passed the Novice test today and I was wondering if some of you would give me some input / info. / advice on rigs and ARRL books.

Congratulations on passing the novice test. Everyone who replys to your post will have a different opinion based on their experience or lack thereof. If you live in a fairly well populated area with several repeaters you will probably buy an HT. I recommend a dual band HT with a GOOD antenna for the house and car. The Yaesu FT50 is probably the most popular right now. It helps to stay with the most popular because there will be more stuff you can get for it. ALL of them work! Some just do different things than others.

I know you are hungry for information! I would NOT recommend buying books on certain subjects right now. Books are at least a year behind current technology. Get the magazines (QST and CQ) for six months or so and then decide what books you really want.

Put up that good base antenna as high as you can get it and use nothing less than 9913 coax to feed it with. Also get a good power supply for home use. Save your battery as much as possible.

Talk to people - read ham postings on the internet - visit web sites - talk on the air - ask lots of questions and weigh the answers carefully. Plan wisely, listen a lot, investigate everything, don't rush into anything.

This is probably not the advice you wanted to hear, but don't let others make up your mind because you WILL regret it! Only you can decide what you want out of the hobby and what equipment and reference material you want to buy. I hope you find a good elmer - they are a rare commodity now-a-days it seems. Good luck and hope to talk to you on the air some day very soon.

Ken, AC4VV

Chris:

I don't know anything about the Drake TR-4 but the Tr-7 was a fine rig. I own a TS830-S station and I LOVE it ! Fine rig, in fact you may find that lots of hams have new rigs but few really part with an 830 for long.... lots are kept as a "second" rig. If you look hard enough you can still find all the companion pieces of a TS-830S station. I also have the SP-230 filtered speaker, AT-230 Antenna Tuner, VFO 230 digital remote VFO, SM-220 station monitor, and MC-50 Mic. All I need now is the Tl-922A linear amp <sigh.....someday>.

I can't get 42 MHz. If I got down to 42, I'll put my scanner at home :)
Here is the frequency coverage,
50-75.995 FM, 76-107.995 WFM, 108-135.995 AM, 136-229.995 FM, 300-399.995 FM, 400-599.995 FM, 600-999.995 FM (with GAP)
I didn't pick up anything on 220 MHz range. Wide FM is wide enough for FM broadcast. Cellular is all over 800-900 MHz.

Hey I did read the manual even with the pl set and the offset set and TX
freq. set and the receive freq. set it still do not TX on 2 meter. Went
through the about ten time and still it do not TX
Transmit is 146.370 with tone VFO B
Receive is 146.970 with VFO A
SPL is 100.0
offset is -600.0
Now what I'm I doing wrong?
Thank you

Source record: 154040

Select 2 m band, tune to the desired frq. and scroll through M-functions until SPL is shown (M1), press then the button for about 1 sec. Not only Split is activated, but also the correct offset is set. You can verify the offset by selecting second VFO, i.e. VFO B (Tx frq), while Rx with VFO A

Press Display button to get M-functions if necessary.

You still need to know correct PLs. Ask local Hams.

Yaesu FT-50 was the best selling radio in 1997 by far.
Mods are easy (search for FT-50 on Yahoo).
Features are numerous on the FT-50.
Its very rugged. If you use an MaHa Ni-Ma batt like the 1800ma you can
transmit all day.

Need recommendations

I would like to buy a used oscilloscope for a couple of budding
(junior high) electronics types. I haven't used one for about
15 years, but believe I would like something which will store
a wave. It doesn't have to be particularly fast. Dual trace
is also not required. I have found a number of companies on the
web which offer equipment for sale, but I don't know much about
the models listed.

Comments on the following would be appreciated:

Fluke 93 (~$600) I thought they made vohms!
Is this really a scope?

HP 1741A (~$700) Says it's dual channel storage

Also I have an interesting advertisement from a British company
called PICO technology which sells a variety of scope hardware/software
add-ons to a PC. Has anybody bought from them?

Any comments appreciated

Mark Davidsaver

I seem to remember that there is a simple mod, like cutting a wire, for the IC-2000H 2 meter transceiver. I t is supposed to permit out of band transmit. Anyone ever heard of that one? I need that for an experiment on a special receiver. I want to use the IC-2000H as a kind of signal generator. Please reply to the group.

73 VE2CJW.

841. Yaesu 8500. How does this rate compared to other Dual Banders?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-09 00:00:00 UTC
From: spambuster@greeneggs.com
Message-ID: <6bnoq5$apq@elf.wang.com>
Source record: 154051

I'm about to spring for a dual bander (2 / 440), and am attracted to the Yaesu 8500. Does anyone have any experience with this radio? Is the receiver hot? It it immune to intermod? Does it have rugged construction? Are there any reliability problems? Would I be better off with the 8100?

I would probably buy it without the Mr. Potato head microphone.

I presently own a Yaesu 2500, and am pretty pleased with the unit.

Thanks
Chris

Source record: 154054

I have one of these sets, though it is the T8E (UK) version.
I do not have a great deal of detail yet since it is new to me.
It will not RX below 50mHz as far as I know.

The set can RX on input when using a repeater by pressing the
squelch key. (it may be called 'monitor' on the US version.)

The thing which dissapoints me is that the RX mode is preset and
cannot be altered except for some very selective parts of the
band - you can swop between am and fm from 300 -400mHz and there
is some wide fm facility. I cannot understand why you cannot
manually swop rx mode across the whole of the rx range.

I will be pleased to swop info and mod info with other users when
available.

I picked up a Commet GP15 Base that covers 2m & 6m.. It wasn't a
good idea.. you can pick up a decent 6m antenna from HRO or
some other place. that would be my recommondation..

As for the antenna tuner.. I don't have one, and all is well without.
As for mobil use I'm not sure. Depends on your antenna, and the
range of the antenna you are using.

as for mobil.. I'm not sure what you'll need. But you will need
Radio
mounting bracket
as for antenna.. I've heard that a 5/8 (non loaded) 2m works well
on 6m. You'll need to ask how narrow, or wide banded the antenn
is on 6m.. but if your looking at mobil I've heard that works quite
well..

Curt

Hi Bull.
I also have a ts440s I bought new in '89. It's a real nice radio. One of the times I rearranged my whole station, I had the problem with both of my mikes also. I unplugged all lines to the rig one at a time. I found that when I pulled out the "FSK OUT" line to my Kam, perfect transmit audio was restored. Turned out I had a ground loop through the line. If you have more than one path to ground coming from the rig, yank em one at a time. May get lucky.

73... Mike

853. Marine SSB for sale - Yaesu FT-180A

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-09 00:00:00 UTC
From: aor@gteais.com
Message-ID: <887071930.364511243@dejanews.com>
Source record: 154063
Cross-posted to: rec.boats.electronics,rec.boats,rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.antenna

Yaesu FT-180A Marine SSB never installed.
Unit is in the factory box with all paperwork and accessories.
Microphone and DC power cord are included (never opened!).
Manuals are in English and Spanish.

The FT-180 is a rugged, compact Marine SSB Transceiver capable
of HF base or mobile operation. The unit covers transmit and
receive frequency (simplex or duplex) pairs from 1.6 to 18 MHz.
Power output is 100 watts PEP. Modulation modes supported are J3E
(USB/LSB) and H3E (AM). A built-in fan cools the final amplifier
to remove excessive heat. Powered by 12V-13.8V DC.

All controls and buttons have a rubber seal, cover or grommet to
keep moisture and dirt out. This unit will work an a car, boat,
or home because of its rugged design. This rig can be used on other
frequencies or bands other than Marine SSB. The manual covers the
frequency selection. There are other discussions on the Internet
USENET where this rig was used as a mobile radio outside of the Marine
bands for public/government service. OK on Amateur Bands.

The unit complies with the strict United States FCC Marine SSB rules:
21.900(k), 74.402(D),81, 83, 87 & 90 at the time of mfgr.
The transmitter has a temperature controlled crystal oven (TXCO) to
keep transmit frequencies accurate. Stability is better than +/-10 PPM.
A receive clarifier helps tune in other stations that may not be on
frequency.

New units are sold at South Midlands Communications.

I am looking to sell this Marine SSB radio for $500 US OBO. Shipping
weight is 10-12 pounds (4-5 Kg). I will ship and insure to CONUS US
states.

A photo can be found at: http://www.smc-comms.com/radios/ft-180a-hf.jpg

Don't forget the W32A has a lighted keypad unlike the Kenwood. As for
battery life, I experienced the same thing. However after the first 5
or so charge cycles, battery life is greatly improved. Ditto on second
sourced batteries. I just bought a Maha 7.2V 1000mAh. IMHO the Icom
W32A is the best buy.

Actually, an addendum is contained in the box with a keystroke sequence to
activate cross band repeat.
So you do not need to do surgery for this.
However, the W32a does not do one-way x-band rpt like the FT51R.

Richard.

861. Help with mobile noise reduction

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-09 00:00:00 UTC
From: zygo@azstarnet.com
Message-ID: <zygo-0902981912080001@dialup10ip34.tus.azstarnet.com>
Source record: 154071

Anybody out there with experience in reducing HF mobile noise in a Toyota Tacoma V6 pickup (or comparable vehicle)? I'm getting S-7 to S-8 noise on both of my rigs (Ten-Tec Scout and ICOM 706-II. The noise blankers take out the ignition impulses quite nicely but I still have a slightly ragged "white noise" background that shows no change with engine speed. I'm assuming it's from the car's computer. It's all to the antenna. No noise with ant disconnected. Antenna now is a mag-mounted Hamstick giving good results. But sure would like to be able to copy weaker sigs .....

I seem to remember that there is a simple mod, like cutting a wire, for the IC-2000H 2 meter transceiver. It is supposed to permit out of band transmit. Anyone ever heard of that one? I need that for an experiment on a special receiver. I want to use the IC-2000H as a kind of signal generator. Please reply to the group.

872. * FS List with pictures

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-09 00:00:00 UTC
From: Bill <bill@halcyon.com>
Message-ID: <01bd34f0$29a33880$a5203fce@bill.halcyon.com>
Source record: 154098

I am selling some of the items I am no longer using. Each item on the list below has a hot link to a picture or pictures of the item. You will have to use the back button on your browser to get back to this message.

My terms of sale are as follows:
I will not ship outside the US.
Payment should be by cashiers check or money order.

You can view my high integrity rating on eBay.

You may contact me by email at bill@halcyon.com

Here are the items!

Index Laboratories QRP Plus

160-10 meter CW/SSB transceiver. This is the latest (last) version they sold. It has never been used in the field and has been used very little in my ham shack. It has a built in keyer and audio filter.

This rig runs some of the best full break-in CW I have ever found. It has a general coverage receiver.

It will come in its original box.

This is the best QRP rig ever made. The original cost was $695.00.

There is a brochure included. The manual is also there.

http://www.halcyon.com/pub/users/bill/qrp-fnt.jpg

Sale price is $525.00

Antenna Manual

The Antenna Manual was published by Editors and Engineers in 1948. It was written by Woodrow Smith. I like this book on antennas because it has practical antennas in it. It actually tells how to build them. It is not just a bunch of theory.

The cover has a water spot on it. The book is hardbound and 306 pages.

The table of contents has the following chapters: Radiation and Propagation of Radio Waves, Transmission Lines, Basic Antenna Theory, Low and Medium Frequency Antenna systems, High Frequency Antenna systems, VHF and UHF Antenna Systems, Receiving Antenna considerations, Coupling to the Antenna system, Measuring Equipment and Techniques, Antennas for navigational Aids, Index.

This is a great collector's item.

The link below shows one of the pages from the book.

http://www.halcyon.com/pub/users/bill/ant-bk.JPG

Sale price is $22.00.

MM-3 Keyer

This is one of the famous keyers from AEA. These are now collector's items. AEA has not sold them for about 3 years now. There won't be any more of these!

The keyer has more features than any I have ever used, memory, contest mode, contest simulator, serial number, paddle reverse, and much more. I have included a picture of the label on the front of the keyer that has a list of all of the functions.

The keyer comes with a manual.

http://www.halcyon.com/pub/users/bill/mm3-lab.jpg

The front of the keyer can be viewed at:

http://www.halcyon.com/pub/users/bill/mm3-fnt.jpg

The rear of the keyer can be viewed at:

http://www.halcyon.com/pub/users/bill/mm3-rear.jpg

Sale price is $165.00

Russian Keyer

To my knowledge there were 30 of these chrome beauties imported from Russia in 1991. I worked for the company that was going to import them from Russia. I kept 2 when the deal fell through!

These are 100 % chrome plated. They are very striking. The keyer is build into the base of the keyer. The keyer is rather low tech. There is no memory, or dot/dash completion.

I don't even like the feel of the paddle.

What I do like is having a unique keyer. Think of owning one of the 30 that were imported. This keyer was written up in CQ and if my memory serves me right was in Dave Ingraham's Keys book.

The paddle contacts are solid silver. The key weighs almost 4 pounds! It isn't going to slide around.

There are no instructions for the keyer. It was not hard to figure out when I made several of them work.

Here are 2 views of the keyer. The knob is the speed control.

http://www.halcyon.com/pub/users/bill/r-key2.jpg
http://www.halcyon.com/pub/users/bill/r-key1.jpg

Cost is $160.00

MFJ Morse Keyboard Keyer

This is the MFJ Morse Keyboard Keyer model MFJ-451. It is new and has never been used on the air! It was purchased for evaluation. That was done on the bench and it was never used again. I have no instructions for it!

MFJ says it has a 200 character type-ahead buffer and two 100 character message memories. It accepts an IBM style keyboard with the large DIN connector as the input device.

Here is a link to a front view of the keyer.

http://www.halcyon.com/pub/users/bill/mfj-fnt.jpg

Here is a rear view of the keyer.

http://www.halcyon.com/pub/users/bill/mfj-bk.jpg

Cost is $70.00

889. ADMS-1D &FT50 a hack to fix one of the problems

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-09 00:00:00 UTC
From: bfurno@interact.net.au
Message-ID: <34dec5e9.8645931@news.interact.net.au>
Source record: 154115

I got the latest ADMS-1D software last week for my FT50rd "wft50.exe ver 1.07" and was disapointed there seemed to be a bug with the TX shift option defaulting to .000 with any offset over 1 mhz i could program the 5.2 mhz offset once then it would default back to 5.000 mhz loosing the .200 this was anoying to say the least it even did the same thing with the 7.6 and 1.6 mhz offset. anyway after changing some of the of the program code with my trusty xtreegold 3 "you know view/hex/edit" i now have it doing what it should have in the first place i also changed the default tx offset list while i was in there so i now have relevant offsets for easy use.
If you have this problem trying to program your ft50 here is what to do...

open the WFT50.EXE with editor "i used xtgold 3 view, hex, edit" but any editor will do if it can open a exe file as you only have to change ascii charactors and make sure it save the file in it's original state and not add any extra byte to the file or it won't work! find the text area inside the file that has the offsets and step rates and all the default VFO freqs at the end of the that lot of text find the text sting that says %3d kHz %1d.%03d MHz and change that to %3d kHz %ld.%03ldMHz basicly you are just adding two small L s and the mhz squeezes up cos you adding with out changing the byte size of the file you might have to leave the z off mhz not sure if i did or not. thats it and if all goes well it will keep using whatever offset you choose as long as it's 50 khz resolution oh and while you at it you can change your default offset list you will see the list above the lines you just edited just change them to what ever you use ie 7.6 MHz to 5.2 MHz or the 1 MHz to 4.6Mz note you can't expand on the bytes used "well not that i know how to"

good luck hope this info is useful also if there are any advanced people reading this that know how to unlock the 870mhz block out please let me know or any other info about the ft50r already have the freeband mod.

Andy, I installed an R7 (previous model) this winter. Both these ants are
a compromise technically, but for a large house - small lot - no tall
trees, they are an expedient solution. The R7 tuned to the low end of all
the bands in 20 min. Rig is an icom756, 100 wts, and I have no complaints
about the ability to qso whether U.S. or dx. The R7 is great for an all
band ant and will stay in service along with the result of a more serious
antenna effort for 40 cw this summer. Sorry, I have no experience with the
HF6VX, but when evaluating these antennas I think you can ignore any
manufacturer's claims of performance in making your decision.

I don't believe that this affects legality either way, the programmed band limits are a bit wider than the superset of the different regions band allocations, so even with this modification reversed, the thing will still be capable of transmitting on out-of-band frequencies.

It's probably worth doing the reverse mod just to reduce the risk of finger trouble, although a modern radio set for wideband output, with the power throttled back and a decent output attenuator makes, a very useful synthesised signal generator at a tiny fraction of the normal cost, and with much more comprehensive modulation facilities.

Perhaps the best approach would be for a radio to have its PA enabled for the normal bands, but to have a transverter output available at all frequencies? I've used a synth radio with 10Hz steps and an oscilloscope to develop crystal filters. With one of those computer interfaces from a PC and a detector into an analogue port, things could be automated somewhat.

Cheers
David GM4ZNX

895. Yaesu FT-5100 Problems

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-09 00:00:00 UTC
From: jrerlewe@mtu.edu
Message-ID: <6bn007$236$1@techsrv1.tech>
Source record: 154121

Hello all.
First of all, Let me say I have absolutely loved using the FT-5100.
Questions:

1) My 5100 recently started showing symptoms of bad performance on the 440 side. I went on a road trip with a friend, and as we entered a new town, he was able to pick up 440 repeaters a goof 30 miles before I could. We could both key them up and talk on them, only he could hear them and I could not. I switched my HT out with the radio, and my HT could work the repeater fine. It seems my receiver is a bit dead. Anyone else experience this?

2) About 3 weeks ago, I noticed a repeater was more distorted than usual. I turned the 440 side 5kc's down and it came in just fine. It looks as though the receiver has been bumped 5kc up. This did not affect the sensitivity problem described above, that was always there and still is. Anyone else?

3) For as long as we have owned the radio, sometimes the S-meter on the subband side (only when 440 is in the subband) goes full scale and there is no signal. Even with no antenna connected. It flutters quickly at times, too. I mentioned this to my dad when we first got it and he said he never saw it do it and if it became a problem we would send it in under warranty. Well, we never sent it in because it wasn't a performance problem. However, if you key the radio or "flick" the top of the display with your index finger, the s-meter usually stops wigging out. sounds like a short somewhere to me? Anyone else?

4) Does yaesu repair radios that have been modified? I've been thinking of doing the extended receive mod, But maybe I should wait until the radio comes back from repair if i decide to send it in?

5) Should i send it in? I know that a common problem with the 5100 has been the display lights burning out and they are human-hair-sized lightbulb leads, and difficult to replace. Rather than monkey with it and risk breaking the radio, when the light(s) do go, i think i will send it in for them to be replaced. Should I wait?? I know it's more of a personal question, but it seems to me it may be cheaper to have all the problems looked at all at once. Otherwise, I have no idea how much it costs to have just the lights replaced, if i were to do that later on. plus it leaves me w/o a radio for longer. :(I have been able to extend the life of my bulbs longer than a lot of 5100's i've seen. I use the manual-brightness mode so that the auto-mode is turned off, and often keep the lights entirely off, except when i am driving at night, which is sort of rare. I would say about 40% of the ontime uses the incandescent bulbs, which has helped me preserve the life, i think. Any comments?

Thanks all--- please reply if you have comments or questions, this has been floating in my mind for a while and I would like to see some ideas. The radio is on loan to me and I want to return it in better condition than I got it--- :)

From: jrerlewe@mtu.edu
Message-ID: <6bn0id$27q$1@techsrv1.tech>
Source record: 154122

Hi all...
my friend called me last night... he is trying to do the ext. receive mod or something to his Icom IC-2350H. Problem? Yes. All the mods say to do something with say, Diode "number 8" but all that is marked on the board is "diode 6 and diode 7" and we are not sure wether we should assume the next diode in the row is "8" or not. Does someone know if there is a mod that draws the board in ascii or something that shows which components to modify/? i've been scrounging all over the net and can't find any such mod. Anyone have any pointers>?

Thanks,
Joe N8OUZ

Bill:

The W-32A does out-of-band Rx on UHF right out of the box, the TH-79A
does not. The FT-51R is way, way overpriced. The W-32A also does Rx in
the 800-900 band with a simple keyboard mod.

901. Re: Yaesy FT-8500 Price Drop!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-09 00:00:00 UTC
From: jorden@dvorak.amd.com
Message-ID: <6bn6l3$6sp$1@amdint2.amd.com>
Source record: 154127

thanks for all who responded to my question about $399 sale
price of yaesu ft-8500.

bought one locally here in austin for $399, powered it up
with battery yesterday and must say I am well pleased with
it so far.

I got the one with the plethora of buttons and knobs on the
microphone.

previous units i have owned include radio shack htx-202 handy
and 2m mobile radio.

thanks again for the replys, see you on the air...

yours,

pat

Thats a great answer, if you read the post , the question was, "what is a Service manual?"

Now seeing that you know maybye you could let me know?

Thanks

Lou R.

Icom IC-T7A, only two months old, complete with PC programming cable and software.

My XYL bought me a full-featured Yaesu handheld for my birthday. Since I really don't need TWO handie-talkies (one for each hand?), I'll let this one go for $200 plus shipping charges from Orlando FL (if applicable).

Reply via e-mail to jtarplin@usa.net.

I am considering buying the DX70TH and would appreciate any comments from
users.
It will be a backup for my Drake TR7 and also allow me to get up on 6
metres from my QTH on Groote Eylandt (OC-141)(PH86ed).
With thanks in advance,
Terry Crothers,
vk8ktc@bigpond.com

> I know of amateurs who have used the "backstay" as an antenna. (d.h.,

Yup, the computer got that wrong, and I'm pretty sure he did in fact mean `backstay'. The backstay is called `Achterstag' in german, and `acht' is german for the number `eight', which is how I suppose the rather linguistically challenged virtual babelfish that did the translation came up with `eightstay'...

[Auf deutsch und in k"urze: Das Achterstag hei"st `backstay' auf englisch]

As an aside, I once took a paragraph from a german newspaper and munged it through the translator that's available on alta vista, translating back and forth between german and english (yes, I was bored). Surprisingly, the iteration actually converged and resulted in something that vaguely resembled modern poetry, but didn't have very much in common with the original passage. Anyway...

> strong -
>
> Andy N7VTB

Andy,

This is the classic symptom of a switching mode power supply (SMPS) spewing its RFI venom across the HF bands. The problem will be made worse if

a) you use an unbalanced antenna such as a random wire or long wire.
b) the noise source (offending power supply) is physically near your antenna.

What else besides your computer and TV might be plugged in? Check for battery chargers, electric razors and toothbrushes, laptops, etc. Another thing you can try is to turn off the main breaker to your house (since you operate on batteries) and see if the noise goes away, indicating that it is something of yours. I know you don't want to hear this, but on a quiet night I can hear several SMPS's owned by neighbors on all sides. You might find some relief as you go up in frequency (14 MHz -> 18 MHz -> 21 MHz ...) but if the SMPS causing the RFI is especially close (or noisy), you may even hear it on these higher bands.

Once you find the source, you will need to begin filtering, shielding, re-orienting, or disposing of it. (ha ha). At first, concentrate on locating the culprit, then we'll work on the other stuff.

Good luck,

Al W6LX

Hello to all...

I have a few things for sale. Terms of purchase:

All items are sold "as is", with no implied warranty on the part of the buyer. Payment shall be made prior to or by COD with secured funds only. If buyer wishes to prepay by personal check, shipment of item(s) will occur when the check clears. Buyer pays all shipping charges, and has choice of FedEx, UPS or US Postal Service for shipment All prices are to be considered firm.

Now that all the fine print is out of the way, on to the items...

BTW, if you have any questions, feel free to email me at kb8ixp@lightstream.net.

73 de N8CLE (new callsign)
Sean Douglas

Note: the condition after each item refers to the cosmetic condition of the item. All equipment is to be assumed to be in perfect working order unless explicitly specified otherwise.

1
Icom IC-900a Multi-band mobile: $900.00
Four band units: 28 MHz, 144 MHz, 222 MHz, 440 MHz
All accessories included.
Instruction manual included.
Condition 8 of 10.

2
Kenwood TM-732a Dual band mobile: $375.00
144 Mhz and 440 Mhz.
Can be remotely mounting, but that equipment is not included
All accessories included, except for mounting screws
Original box and instructions included.
Not modified.
Condition 9 of 10.

3
Icom IC-R1 Scanning Receiver $275.00
0.5 MHz to 950 MHz receive *continuous*.
100 Memories.
Includes belt clip, end cap, antenna, internal battery and charger.
Condition 8 of 10.

4
Icom IC-2SAT 2m HT $175.00
144 MHz.
Includes belt clip, end cap, antenna, internal battery and charger.
Condition 8 of 10

5
Icom IC-4SAT 70cm HT $150.00
440 MHz.
Includes belt clip, end cap, antenna, internal battery and charger.
Condition 6 of 10

6
Uniden MR-8100 Scanning Receiver $225.00
29-956 MHz less cellular (can be restored via computer command).
Includes Speaker
Condition 7 of 10

7
Midland 70-665B UHF Commercial Transceiver $200.00
450-470 MHz, 80 Memories EEPROM programmable, remote mount 65 Watt.
Includes microphone, speaker, service manual.
Condition 7 of 10.

8
Midland 70-056C Low Band Commercial Transceiver $200.00
40-54 MHz, 80 Memories, EEPROM programmable, remote mount 110 Watt.
Currently programmed in 6m amateur band.
Includes microphone, speaker, service manual.
Condition 9 of 10.

9
Radio Shack Patrolman PRO-2026 Scanning Receiver
$125.00
29-956 less cellular, 100 memories, service search
Includes original box
Condition 9 of 10.

For Sale, Heathkit DX-40 Transmitter with Heathkit VF-1 VFO. Surplus to my collection; acquired as part of a package deal. Both items sold to me as working, but have not been tested or used. DX-40 appears to be in good mechanical condition, but only fair cosmetic condition. There are no extra holes on the front panel, but there are two holes on top, and a couple of small holes on the back. Paint is scratched & flaked.

VF-1 is in good condition with no extra holes.

Manual reproductions included for both items.

$75 plus shipping for pair. (offers will be considered)

BY1QH RESULTS ON 144 MHz EME, SATURDAY, FEBRUARY 7

SUMMARY:

RX and TX performance much better than expected!
Got QRV 45 minutes later than planned. SRI!
Very low local QRM all the time!!! UFB WX.
WKD I2FAK SM2CEW PE1LCH PA2CHR HRD 9H1CD,
Sked 1600-1630 continued until 1728.
PA died at 1900.
We detected only 2-3 unidentified callers.
Seemed like very few called us.....?
Very satisfied any way!

DETAILS:
P=Planned activity
H=This is what happened
UTC
P 1130-1230 EME random.
H 1215-1230 EME random. SRI ABT late QRV!!
P 1230-1300 TEP sked SSB 144.136 MHz with VK6XLR
H 1230-1300 TEP sked. NIL HRD in both directions.
P 1300-1330 EME sked with PE1LCH, PA2CHR tail end. QRG unknown
H 1300-1330 EME sked with PE1LCH. Too weak signals to copy.
P 1330-1600 EME random
H 1330-1600 EME random. WKD I2FAK 1356.
Called 9H1CD 1443-1518, NC.
WKD SM2CEW 1552.
P 1600-1630 EME sked with PE1LCH, PA2CHR tail end. QRG unknown
H 1600-1728 EME sked with PE1LCH, PA2CHR tail end.
The signals were improving all the time, so we kept
on going. At 1700 we just needed the "Q" in our
call sign. Completed with PE1LCH at 1711.
Completed with PA2CHR at 1728.
P 1630-1800 EME random. From 1700 our local QRM is less bad!
H 1730-1900 EME random. From about 1814 there was an
unidentified station calling, possibly sending:

R, N, 52, B, U, and L ...? At about the PA
died....QRT
P 1800-1830 EME sked with PA2CHR. QRG unknown NW.
P 1830-2035 EME random

P 2130-2230 CQ DX 1827 kHz +/- QRM, 400 W & dipole at 30 magl
H 2140-2235 CQ 1827 kHz/1826.6 kHz, QSX 1829. WKD only BV and
YC.

COMMENTS:

VY SRI ABT getting QRV 45 minutes late! Some preparations took
longer than expected.

The local QRM level was so low that we had to make sure several
times that the pre-amp was OK....! UFB! I even switched on the
built in pre-amp in the IC-706. The Chinese new year is VY
important in BY. The university was on holidays, so we guess all
local QRM sources were switched off. Even the paging transmitters
seemed to affect us less than expected, even in daytime.
We were VY happy and encouraged by being able to work "average
size" PE1LCH and hear 9H1CD, after having to struggle with big
guns like KB8RQ, W5UN and VE7BQH.

We got the impression that few stations were QRV since PA2CHR
reported good signals from us during our QSO, also we think I2FAK
called us a 2nd time giving us 529 report, and SM2CEW seemed to
have had a very solid copy of us. He also found our sked QRG
144.120 MHz easily. We even made a few phone calls to SM to try to
stir up some activity, but soon the PA died!! Thanks any way to
SM4SJY who we think made several phone calls for us.

Especially happy about being able to work PE1LCH and PA2CHR who
both contributed with VY important equipment to BY1QH!!! (It is
just too bad that we could not give both of you a "first"!)
Too bad about the new PA going QRT! We really hope we can repair
it. The old PA is still in BY, but it was not in the shack, so we
could not switch.

Next activity is not yet planned, but it is likely to take place
within 3-6 weeks.

Pictures, sound file, log, and other info ABT BY1QH can be found
on: http://www.horizon.nl/~tdekkers/by1qh/index.html
The BY1QH home page is made and hosted by PA3DSS.

Station improvements since 1997 are:
Improved elevation readout at low elevation angles
New RX filter 250 Hz (500 Hz B4), and new PA (presently QRT)

Other equipment same as before:
IC-706 Mk2
SSB electronics pre-amp 0.8 dB NF in mast head

4x9 el Vargarda, total gain 17.7 dB
Stacking loss 0.5 dB, feeder loss 0.7 dB

QTH: LOC ON80DA
Tsinghua University in Beijing

NEED INFO...WHERE IS THE BEST PLACE TO BUY CRYSTALS FOR MICORS?

kc7rzi@coffey.com

923. FS: Kenwood TS-520S (Seattle area)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-10 00:00:00 UTC
From: "Mark S. Jennings" <markjenn@halcyon.com>
Message-ID: <6br8ir$pc3$1@brokaw.wa.com>
Source record: 153899

I have a mint-condition Kenwood TS-520S transceiver for sale. This is an excellent HF transceiver for a new ham or someone who likes units with tube finals. 100W output. It doesn't tune the WARC bands. Excellent receiver section. Very lightly used and carefully stored for the last ten years. I just fired it up and it works perfectly. Not a scratch or ding. Impeccable build quality. It includes:

Kenwood MC-50 matching microphone
Kenwood SP-50 factory speaker
Operator's manual
Factory service manual
Original double-box shipping carton

I'll also throw in a very nice manual telegraph key...a New Viking that weighs over a pound and isolates all the current-carrying parts in the base. The best feel of any key I've ever used.

I'm asking $350+shipping but will entertain any reasonable offers. I'm in the Seattle area.

Please get with me via email if you are interested. Thanks,

- Mark (N9AFL, markjenn@halcyon.com)

I believe I have read somewhere that there is a switch to increase output on the FT757GX, but have misplaced the post.

Seems it was a switch inside the front cover.

Could someone please help me out on this. Only getting about 25 to 45 watts output and need to have the 100 the rig is designed for.

Thanks in advance for the help.

It is a standard CR-2032 Lithium Battery (3.2v) but has solder tabs spot welded on it. Kenwood Part Number W09-0326-05.

It is behind the front panel. You have to remove the top and bottom, knobs, and nuts on the mike jack and encoder. The display will come off and then 3 screws removes the control unit and there it is.

I'm looking for a commercial voice activated switch product to provide automatic keying of a radio. The features that I am looking for are as follows:

1. Accurate voice detection with minimal false triggering.

2. Relay for triggering the radio's PTT.

3. Support for a Radio Busy signal so that the unit will not allow transmission while another person is transmitting.

4. Audio source to be a computer.

Any ideas or assistance would be greatly appreciated.

Yaesu has documented a high SWR problem causing that radio to stay
keyed. Check your SWR, and if this is the problem return to Yaesu for
repair. Also, then you can fix your SWR problem!

>one for 50mhz and hf bands. What is a good antenna for the 50/hf bands,
>I would like to get something really small so he can drive into his
>garage.

That's what I thought too. I bought the Comet 4 band HF antenna.
It is relatively small, well made, can be folded over, is relatively
expensive, and doesn't work worth a darn. A better deal is a handful
of Hamsticks for the various bands he'll want to operate. That'll be
cheaper, and work better, but he'll have to get out to change bands.
The ultimate solution is a screwdriver antenna. That'll work all bands,
and won't need a separate tuner. It's a bit tall, though.

An old compromise is the Hustler with the fold over mast option
and a selection of resonators.

>Do I need to get the AT180 antenna tuner, if so then what type of
>antenna to I need for that??

This is not a great antenna tuner, and it is particularly poor as a
mobile antenna tuner. If you want an Icom antenna tuner, get the
AH2 and the whip that is sold for use with it. Otherwise, get a
SGC tuner and whip, or for use with the Hamsticks, the AT-11
tuner is a good cheap solution.

For 2m, a Larsen antenna will be fine. Get a 5/8-wave for roof
mounting if you can stand the height. Otherwise get the 1/4-wave
model.

>What other options do I need to make this a complete mobile package so
>my dad does not need to buy anything eles??

A good external speaker would be nice. And be sure you get the front
panel extension kit and brackets. This radio is an excellent choice for
trunk or under seat mounting with the front panel remoted up on the
dash. That's how I have mine.

Hi there fellas.

I just got my Sony CCD-F302 8mm camcorder back from the repair place I took it to to get a diagnosis, and they claim it's the video heads (they said they cleaned it w/no result). I may tend to agree with this as the playback noise problem appeared one day when it was not there before at all. Plays this way with all the tapes I own, so I do not think it is the tape.
They seemed reluctant to quote me a repair price; I don't really think he knew where he could get the required parts (the camera's prolly 7 years old). Where would I go to find replacement heads that wouldn't cost me more than a new machine?
I checked out MC Electronics, Dalbani... none of their websites really said anything about camcorder heads. Are they hard to find? It looks like I could install the heads fairly easily in the camcorder myself; the drum is out where I can get at it if I remove the tape door.

Thanks for any info or repair parts sources!

>Anyone know of any good books or clubs?

I hate to see a Novice jump right into QRP. It takes a bit of skill and
experience to operate QRP successfully. You're likely to find it very
frustrating without that experience. I'd recomend you start with
a used HF transceiver in the 100 watt class. Once you have some
experience using that at home, then consider QRP operation. There
are lots of kits available, and a few ready built QRP transceivers.
Concentrate on finding the one with the best receiver section. Most
of the transmitters are about the same, especially for CW operation.
It is the receiving ability that will make or break your operation.

As for books, the ARRL is your first stop. They have plenty of
good books. Get their operating guide and their guide to setting
up your first station. A copy of the Handbook is also always
a worthwhile purchase.

>I hope to upgrade to Tech. Plus next month. So, what would be a good,
>**_tough_** , light-weight, 2m or 2m / 440 HT that I could use for
>backpacking. If you have any suggestions on what features & options I
>should look for, please let me know.

The FT50R from Yaesu seems to be the best all-around choice of the
moment. I'm generally not an advocate of the HT as first or only VHF
rig, a mobile/base radio with more power is generally a much better
choice, but in your case, a HT may be the only choice.

>Books --
>I have an ARRL catalog and noticed that they have several different

Chuck, you'll benefit from buying them all, at least those in your areas of interest. It is often the two or three different ways of saying the same thing which will make the light bulb come on in your head. At least it works for me. Email me if you want to discuss particular books.

959. Kenwood TS-450 Sidetone Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-10 00:00:00 UTC
From: rclott@ro.com
Message-ID: <6bq70ijuv1@news.ro.com>
Source record: 153957

I have a problem with my 450AT transceiver. The sidetone oscillator seems to start up whenever I plug in my key to the jack. There isn't any short or similar problem. When I close the key, I hear a slight change in the sidetone, so I know that the key is connected properly. After tracing the circuits through, I convinced myself that the sidetone oscillator modules was bad. I just replace this module, and alas, it's still busted.

Has anyone heard of a similar problem with a Kenwood? I'd love to learn from someone else's experience, if available. Thanks,

-Chris Lott

Subject: Re: Yaesu FT-530 Modifications?
This is copied verbatim from the mod sheet I received with my rig...

YAESU FT-530

Expanded Receive 110-180, 300-500 MHz
Expanded Transmit 130-180, 400-470 MHz

NOT LEGAL IN U.S.A - FOR EXPORT ONLY

o Remove Antenna and Battery.
o Remove four screws on bottom holding battery track.
o Remove the four (black) screws holding rear case.
o Slowly... open the front cover from tranceiver and lay both halves on
table.
o Note positioning of white paper insulator in right half of radio and
lift out
(don't throw away)
o Carefully locate Jumper Pad 13 and remove solder.
o Re-install white paper insulator, make sure ground tab slides through
the
paper insulator.
o Close radio back up (Careful not to pinch the ribbon cable near lithium
battery when closing halves).
o Re-install the four (black) screws holding rear case.
o Re-install the four (small silver) screws on bottom holding battery
track to
radio body.
o Attach Antenna and Battery.
o Turn off Radio.... Press and hold both arrow keys while turning on the
Radio.
o Modification Complete.

Pad 15 now a vertical pad with a tiny
"zero ohm" resistor.

-

In side the rig, it really did not look quite like that ... more like
this:

... 12 (|) (|) 11
(|) 13
16 (|) (|) 15

In addition to the published receive expansion, it also receives 800-950
MHz...
trunking radio, cell phone (I would *never* listen to that), 33cm ham
band...

Have fun!

copied from packet:
From: KC6VLG@WA6HAM
To: MODS@ALLUSA
Subject: FT 530 mods add on info

As you all know the mod for the Yeasu FT-530 is to remove the jumper #13.
The
next step is very important and a few mod plans does not mention. The CPU
needs
to be reset by holding the UP and DOWN keys while turning the radio on.
Before
you do the reset, remember to remove all power sources to this radio and
wait
for the rig to completely discharged prior to the reset. If the rig is not
totally discharged, the mod will not work. Good luck

Continual resets may toggle the mod being active in certain models of
530s.

73 de John KC6VLG @ WA6HAM.#NOCAL.CA.USA
==========
Note: I haven't tried or verified this, proceed at your own risk. WA2ISE

HI, THIS MESSAGE IS FOR THOSE WHO HAVE DONE THE PAD 13 MOD TO THE FT-530.
THIS SEQUENCE PERMITS PUTTING A 500 MHZ OR HIGHER FREQ IN A MEMORY
CHANNEL.
EXAMPLE: TO ENTER A FREQ OF 506.8375 MAKE SURE YOU ARE IN THE UHF BAND.

1. PRESS 'FM'
2. PRESS 'STEP'
3. ROTATE DIAL TO SELECT 12.5 STEP
4. PRESS 'STEP'
5. ENTER 800.00
6. PRESS 'FM'
7. PRESS '\/' MHZ

799.00 WILL SHOW ON THE DISPLAY. TURN THE DIAL (TOP RIGHT-RUBBER DUCK ON LEFT)
COUNTER CLOCKWISE. THE DISPLAY WILL DECREASE IN 1 MHZ STEPS. IF YOU PAUSE
FOR MORE THAN 2 SECONDS IT WILL REVERT TO A DECREASE OF KHZ STEPS. TO GET
BACK TO MHZ STEPS JUST PRESS 'FM' THEN PRESS '\/' MHZ. CONTINUE TILL 507.00

SHOWS ON THE DISPLAY. PAUSE FOR 3SEC. TURN DIAL COUNTER CLOCKWISE AND THE
FREQ WILL DECREASE IN KHZ STEPS. TURN TILL 506.8375 SHOWS ON THE DISPLAY.

8. PRESS 'FM' FOR 3 SEC.THE MEMORY CHANNEL NUMBER WILL BE FLASHING.
9. TURN DIAL TO SELECT MEMORY CHANNEL
10.WHEN CHANNEL IS SELECTED PRESS 'FM'. THE FREQ IS ENTERED IN THAT MEMORY CH.
BACK TO MHZ STEPS JUST PRESS 'FM' THEN PRESS '\/' MHZ. CONTINUE TILL 507.00
SHOWS ON THE DISPLAY. PAUSE FOR 3SEC. TURN DIAL COUNTER CLOCKWISE AND THE
FREQ WILL DECREASE IN KHZ STEPS. TURN TILL 506.8375 SHOWS ON THE DISPLAY.
IF YOU GO PASS THE FREQ YOU CANNOT TURN THE DIAL CLOCKWISE TO GO UP FREQ. IF
YOU DO SO THE DISPLAY REVERTS TO 300 MHZ AND YOU MUST START AT #5. HELPFUL HINT
EXAMPLE: 506.8375 IS NOW IN MEMORY CHANNEL 5. PRESS 'MR' AND SELECT
CHANNEL 5. 506.8375 IS NOW ON THE DISPLAY. PRESSING 'MR' AGAIN WILL
NORMALLY LET YOU (>>>> SHOWS UNDER CHANNEL NUMBER) TUNE UP OR DOWN IN FREQ.
NOW ON THESE OVER 500 MHZ FREQ YOU CAN ONLY TUNE DOWN (COUNTER CLOCKWISE).
TUNE UP (CLOCKWISE) AND DISPLAY GO TO 300.XX MHZ . PRESS 'MR' AND THE
CORRECT MEMORY CHANNEL FREQ IS DISPLAYED AGAIN . THE PLL ON MY UNIT WILL
NOT LOCK ABOVE 507.6 MHZ ON ANOTHER FT-530 IT WILL LOCK OVER 508.4. PRESSING
THE PUSH TO TALK WILL DISPLAY AN ERROR ON THE DISPLAY AND IF THE PLL WILL
NOT HOLD THE FREQ DISPLAY WILL FLASH. 800-950 IS THE UPPER RANGE OF MY UNIT
AND RECEIVES FB. ANY OTHER MODS OR KEY INPUTS PLEASE SEND TO WA3YZL@WB3JOE.
PA.USA 73 PAUL04-Jan-93 21:29

I have a comment on the FT530 mod. Near the end of the instructions there
is a warning not to transmit out of band; maybe a comment should be added to
remind users that the FT530 can store a separate transmit frequency (not just
an offset). I did this for the items I stored in memory, that were in the
extended transmit range. This way if I ever make a mistake, I transmit on a
HAM frequency, not the public service freq I was listening to..

I know of 2 physical changes:

1). If jumper 15, (or the zero ohm resistor, depending on your version), is
removed, the transmit freq's remain stock when done with removal of jumper
13. This is per the mod sheet from YAHOO.

2). Putting a solder bridge across jumper 12 makes it a tone burst unit
for Europe.

>nicer would be something enabling a 30Kc step. Of course, I don't
>know how that would be useful, but it would be nice to have :) :) :)
You are correct, I should have said REMOVE jumper 13 to get rx 110-180,
300-500, and 800-950. Also tx 130-180 and 400-472.

However the mod sheet DOES say jump pad 12 for tone burst.

I will gladly send a copy of it to anyone who sends me a sase.
CBA for KD1GG
Bob

Hello,

There seems to be a difference in the way the AM receive on
my new Yaesu FT530 works compared to that of the
instruction booklet.

The instruction booklet says that if you enable AM receive
(key sequence: FM, Set/0, FM, PRI/VFO) that it affects "the
entire VHF receiver". Yet I am finding that I seem to be
able to store the mode along with the frequency in the
memory channels and then scan a mix of AM and FM
frequencies. It also seems that one can set both VHF
VFO's to one of AM or FM.
I am curious if anyone can add to the explanation on how AM
receive works on this fine radio? I would guess the
design engineers made an enhancement to the firmware after
the documentation was completed...

Thanks,
Peter

You can store the "MODE" in memory.
Setting the unit to AM can be done on either VFO.

Setting the unit to AM will preclude you from receiving 2M FM.

As for how it's done... from what I heard (I never bothered to check)
they run the signal through the S-Meter diode to demodulate AM.

964. FT-50R current draw when off

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-10 00:00:00 UTC
From: "Eric F. Richards" <efricha@flatland.dimensional.com>
Message-ID: <6bq8rn$b90$1@quasar.dimensional.com>
Source record: 153962

Greetings, all...

I have a Yaesu FT-50R and have been generally pleased with it. However, recently it seems to be going through batteries quickly. Last week I got called Yaesu tech support and was told, "if your current draw is in the milliamperes when shut off, send it in." Well, I measured the current draw at 310uA -- the manual says that in APO mode it draws 250uA. I'm guessing that I've killed (or at least maimed) a couple battery packs. I'm also guessing that the above difference is insignificant. Today's call to Yaesu tech support was unhelpful -- no answer, just "Send it in and we'll let you know." (Thanks, loads.)

Can I convince someone out there to measure the current draw of their FT-50 and post the results?

(My measurement was done with a Wavetek RMS225 in autorange (default) mode.)

Thanks much,
--

968. Re: Yaesu FT-8100 or FT-8500

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-10 00:00:00 UTC
From: Ed Boakes <eboakes@lucent.com>
Message-ID: <34E0B40D.D6B73134@lucent.com>
Source record: 153966

I installed an 8500 in my Ford F-10 pickup. I chose it
because I could mount the display ABOVE the rear-view mirror,
mount the potato-mic on the left edge of the console, mount the
left channel speaker on the driver's door (with an after-market
car-stereo speaker, the right channel audio on the console,
and put the rather small body of the rig under the passenger's seat.

I like the 2 seperate audio outputs, and a display that has no controls
on it, so it can be mounted where you don't want to be putting
your hand all of the time. It also has alphanumeric tags which
display along with the frequency. It receives 460MHz and 162.55 MHz
with little degradation. (The 8100 doesn't have alphanumeric tags.)

On the down side, when you grap the mic, it's easy to totally
mangle your settings, and it is a bit difficult to quickly do
something such as change a PL tone while driving.

On the handheld side, I'd recommend the Yaesu 50RD, but I'd
advise against the VX-1R, as the PL decoder is quite slow.

Welcome to Ham Radio!

The receiver itself is usually the most sensitive field strength meter
you can find. The problem is to find that portion of the circuit that
is a good indicator for received signal strength. If you have enough
power available to use just a simple 1N34 diode detector with a
sensitive voltmeter, that would be the simplest way to go. The small,
battery operated digital VOM's that can be purchase as cheap as $15 or
less, will have a sensitivity of a few millivolts. If your
transmitter is capable of 5 watts, for example, you will have no
trouble getting good deflections with a small whip antenna (a foot or
two long), a 1N34 diode and the millivoltmeter range of a VOM.

antennas built in Germany. The antennas had the appearance of a
knitting machine - hence they were called "Woellenweber".

>I would build for my ship (steel sailboat) one SSB antenna . On the
>eightstay I have not good experiences.
Ich verstehe nicht "eightstay". Das muss eine falsche Uebersetzung
sein.

I know of amateurs who have used the "backstay" as an antenna. (d.h.,
the steel cable that runs from the Stern (of the boat - nicht Sternen
wie im Himmel) up to the top of the mast. They have reported very
good results. The steel hull of your boat will enhance a "ground
plane" vertical. All you need is a proper tuner or transmatch to
match the impedance of the backstay to your transmitter. You should be
able to operate on any frequency from 6Mhz through 30MHz.
40M, 30M, 20M, 17M , 15M, 12M and 10M. It is not a sufficient antenna
for lower frequencies unless you provide some capacitance or "top hat"
loading. (d.h. viele quadratmeter auf der spitze).

>It gives in the ship accessory SSB antennae those are approx 4 to 6 m of 1,6
>to 24 MHZ long the entire maritime mobile service field and for the entire
>maritime mobile service field

>Now my question:
>Since these antennae cost approx 600 DM would like to build themselves.

A good tuner will cost less than $140 for power under 300 watts. The
insulation of the backstay from the mast and the hull is mechanical
problem.

It's been my experience (for friends and such) that repair places are
really hesitant to do any repairs on camcorders. I get the impression
that they don't like to work on the small delicate instruments with lots
of small parts. Sort of like taking your borken watch to aamco
(transmission place).

976. squelch tail on crossband FT5100

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-10 00:00:00 UTC
From: lent <gte900f@acme.gatech.edu>
Message-ID: <34E0BEFA.1C4E5315@acme.gatech.edu>
Source record: 153974

Does anyone know how to lengthen the squelch "tail" on the FT5100 while
in crossband repeat? When using it on fringe areas or through a moving
mobile
I receive a lot of flutter and the signal is dropped which makes the
crossband signal
even more unreadable. I think if I could increase the tail I could keep
it from dropping
out and the signal would be a lot more readable.
If anyone also has any suggestions on how to generally improve crossband
repeat
performance (ie seperate antannas, filters, etc.) I would be much
obliged!

I agree. The key to ham radio is LOUDNESS. CW or SSB you want to be
as LOUD as possible.

For radios, they key is three words -- Icom, Yaesu, Kenwood. I'd look
for something like a used IC730. That's what I had first. Put up
wire antennas if you have the space -- or a vertical WITH the radials
and you'll be fine. When you upgrade to General, I'd pick up a big
amplifier -- if you want to use SSB.

DX-70TH
1) The noise blanker does not work on FM. The unit is totally
unuseable for 10 & 6 meter FM mobile operation.
2) You can not store FM repeater offsets into memory channels (pain!!!)
3) Only "one" PL can be selected at a time, via dip switches on
the bottom of the unit. (pain!!!)
If you are not going to use it for mobile operations, then it would
be a "fair" radio. It only has dual IF stages. However for mobile
operation, this is why I bought it, on FM its poor!!! If you want,
I will sell you mine CHEAP including the matching mobile antenna tuner!

979. Re: Help with mobile noise reduction

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-10 00:00:00 UTC
From: NE7X <NE7X@amsat.org>
Message-ID: <34E0BE96.5E6@amsat.org>
Source record: 153977

I have the same problem with my Alinco DX-70th in my Chevy Suburban.
I have been fighting the "white noise" issue for almost two years now.
I have tried all the voodoo magic suggestions from various people,
(ie: grounding tail pipe, ground straps between engine hood and fenders)
and I still had the same problem.

What I did find was some of the "white noise" was coming from a DC
blower fan motor on my oil radiator. I discovered the white noise would
increase and decrease when this blower fan motor came on/off. I placed a
20 turn torriod coil in series with the DC power connection, including a
.001 uf cap across the torroid input and output. This eliminated the
noise being generated by that motor 100%. However, I still have "white
noise".

After talking with several mechanics, I'm now led to believe the white
noise is coming from my fuel pump motor and maybe the computer unit
itself. I haven't gotten into it any further at this point, however my
next steps will be to try the torriod and capacitor trick in series with
the fuel pump motor.

In the mean time, one thing I did come across is a JPS ANC-4 noise
eliminator. This device places any noise picked up on it's sensor
antenna wire 180 deg out of phase with the primary receiving antenna,
thus canceling out the noise. I ran the sensor wire from the ANC-4 into
the engine compartment, next to the distributor cap and fuel pump. I am
now able to reduce (not eliminate) the white noise by 3 S-units.

My HF mobile installation is useable at this point, however I can not
QSO with station below a S2. Those signals are in the white noise.

If anyone else here on the net has some suggestions, please pass them
along to all.

980. Re: Yaesu FT-8100 or FT-8500

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-10 00:00:00 UTC
From: kilo5joe@aol.com
Message-ID: <19980210212100.QAA04406@ladder02.news.aol.com>
Source record: 153978

I have had the 8000 Yaesu and it is like the 8100 except the face
would not remote mount... I like the 8000-8100 better than the
8500 because it will recieve up to 1300 MHZ, including the
800 meg bands where our cops and fire departments are, here in Little Rock,
AR,,, It is like having a dualband ham rig and a scanner built in to one
radio... the 8500 will not rec. 800 or 1300meg.
The 8500 is on sale now for 379.00 at AES so they are probly going to
discontinue it, because it use to sell for over 600.00......
That is all I have to tell you on thoes radios... OH, one other thing.
If you are planning to use a 2meter or 440 amp with your dualband radio you
might need to look at a radio that does not have a built in duplexer, like the
733 Kenwood. It has two antenna outlets, one for 2meter and one for 440...If
you hook a 2 meter amp up to your radio with a built in duplexer you will not
hardly hear or be able to transmit very far on 440 ....
Hope I was of some help...

Joe in Little Rock, AR

981. Info on ADMS-1D and VX-1

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-10 00:00:00 UTC
From: baxter@kuhub.cc.ukans.edu
Message-ID: <1998Feb10.152204@kuhub.cc.ukans.edu>
Source record: 153979

I have one of the nice VX-1R handhelds, and have been interested in the ADMS-1D software for programming the radio. The manual method of programming is rather slow and clumsy, with the limited number of knobs and buttons on the radio, so the software way seemed to be the way to go.

However, reading the newsgroup, it seems there have been problems with radio settings getting scrambled, etc..

I would be interested in knowing from the readers of this group what experiences they've had, positive or negative, with the ADMS-1D and VX-1R combination.

Our local dealer has also been backordered for weeks on this product... does anyone know if they're making changes to the product which have made it temporarily unavailable?

983. Re: FT-50R current draw when off

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-10 00:00:00 UTC
From: "Jose R. Camara" <camara@quantacorp.com>
Message-ID: <34E0C880.B34DF91B@quantacorp.com>
Source record: 153981

Eric:

Just measured on mine, 225uA at the battery input on the radio, using 8V from a power supply.

Bad news (to me) was that when I turned the radio on and then off, it would draw 2.7mA unless I opened the circuit and closed it again , then it would draw 225 uA. Which would mean I'd have to turn the radio off and remove and reinstall the battery each time. Not very practical.

Good news is that Yaesu (562-404-2700) will take care of it under warranty, and I also found out they came out with a low profile power button which will solve the other dead battery problem I have (radio turns on by accident inside a briefcase, pocket, backpack,etc.) I was about to cut a slice off the button to make it lower...

Best regards,
Jose R. Camara

Hello Friends,

I still have a near mint TS-930S/AT transceiver for sale.

Electrically, it's perfect. It has been checked and aligned by
the Kenwood experts at International Radio in Florida.

Cosmetically, it's in super clean condition.

With original manual and box.

Just reduced to $775 + shipping, Or Best Reasonable Offer.

992. TM-701A Battery Help

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-10 00:00:00 UTC
From: n5kzw@ibm.net
Message-ID: <34dfc624.277919000@news-s01.ny.us.ibm.net>
Source record: 154001

After I got the swap-meet-special TM-701A mounted in the wife's car this weekend, we found out that it has no memory retention. The thing is a pain to get in and out, so I'd like to have a battery ready to pop in when I pull it back out. The schematic neglects to give the battery voltage.

Can anyone tell me the battery voltage and lead configuration (or Digi-Key cross reference)? Can anyone advise me of any difficulties I'm going to encounter in getting to the battery or replacing it?

Thanks,
Ed

1000. HELP!, Power meter problems URGENT science fair help

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-10 00:00:00 UTC
From: John Lauber <jlauber@execpc.com>
Message-ID: <6boe5q$pkb@newsops.execpc.com>
Source record: 154009
Cross-posted to: aus.radio.amateur.wicen,git.radio.amateur,mcgill.amateur-radio,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.mi

I need urgent help to get me off on my science fair project.

I have been doing an experiment to test the resistance of different materials to an airborne signal, but I need serious help on the apparatus. First I tried a baby monitor and used an amplified microphone to pick up variances in the volume of the signal (audible), then measured the output of the microphone on a voltmeter. A very simple and indirect way of doing it. It worked, but it didn't seem to pick up enough change, and my preliminary testing resulted in less than desirable results. Second, I tried measuring the strength of a CB signal with a wattmeter, but the wattmeter had to be wired inline between the transmitter and antenna, not what I wanted to test. Is there any piece of equipment that measures the strength of an airborne signal? Am I setting this up right? (see diagram below)

```
------------------- | | --------------
| transmitter | | Block | | receiver |
------------------ (lead etc.) ---------------
```

Is there a wattmeter or other piece of equipment that will take the place of the receiver and give me a reading of the power of the signal, either precise or relative? I need some form of project by 2/17/98, and a good one by Feb. 23. I urgently need any help you can give me. Thankyou.

Please respond to jlauber@execpc.com .

Sincerely,

Dan Lauber

Kenwood was sold a bill of goods on a potting compound they used in the TS-440 which became conductive after a few years. It was intended to keep the rig stable in mobile operation. The fix is to remove the compound, which means removing each component, scrapping the crap outta there, and replacing the component back; an extremely tedious job. There are several fellows around who are good at performing the work. I had mine done by Jim Kasunic (Electronic Service Lab) KA3LPC. He can be reached at 301-845-6949. He's well equipped and very good at fixing Kenwoods, with very reasonable prices for the work he does.

1003. IC-706MkII GO with DSP or Internal Filters???or both???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-10 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <19980210063501.BAA05952@ladder03.news.aol.com>
Source record: 154012

Hello,

I have a ICOM 706MkII. I am trying to decide which way to go in regards to filters and sound quality. My Dilemma:

Do I purchase two internal filters OR just purchase the new DSP? or should I purchase both? I plan in keeping this radio for sometime and don't mind maxing the radio out with accessories. But are the internal filters a waste if I have the DSP installed?

Two filters are going to cost me about $200 where as the DSP is selling for about $140 right now(I purchased the DSP in December of 97, so I miss the free deal =(

So people...what is your opinion? One or the other or both or none?? =)

Thanks for any and all comments!

Jason Hulet

Hi Mack!!! For a GOOD quality linking rptr controller, check out
the LINKCOM series at www.link-comm.com

All the models support full duplex linking...for what you want with
all three machines may be a RLC Club on the ends and a RLC 2 or 3
in the middle! The Club is a two port controller...one for your local
rptr and the other for the link to the middle system....the RLC 2
is a 3 port controller...1 rptr and 2 links...or any combo of them..
the RLC 3 is an expandable one...starts with 4 ports...autopatch
uses one port of the RLC 3...but not on the 2 and Club...The CLub
and RLC 3 uses same software and programs almost the same! The 2
uses similar but different software schemes....For radios, I
suggest GE MSTR II or EXEC II radios...well built and work for me
I have 4 rptrs using GEs ...two are linked via full duplex 420 links.
All but one use RLC 3 controllers....(the 4th is an ACC RC850 no longer
available)...

My 8500 has been excellent, no complaints at all. It works as
advertised. I had no intermod problems in houston or dallas. I prefer
the "potato head mic", although ugly, its the 8500's strongest feature.
It allows complete control of the radio by feel, instead of having to
stare at the little mic buttons. The other mic uses a 2nd function key
requiring much more skill to operate mobile !!

Hi,

I would build for my ship (steel sailboat) one SSB antenna . On the
eightstay I have not good experiences.
It gives in the ship accessory SSB antennae those are approx 4 to 6 m of 1,6
to 24 MHZ long the entire maritime mobile service field and for the entire
maritime mobile service field
Now my question:
Since these antennae cost approx 600 DM would like to build themselves.
Where I can find a manual?

Klaus

I'm getting a 'buzzing' noise/signal about every 81-83 kilohertz - strong - several S-units over the general noise. Every band - Two different radios, both run from a battery. Local computers/tv's off. Does this ring any bells for anyone?

I have an old KW2000E which I'm trying to find a good home for. It hasn't been switched on for about 10 years, and frankly it looks as though you could grow mushrooms in the cabinet. It goes (went ;-)) at about 150 watts and I managed to work W, VE, VK, ZL, VU on it using a simple ground-plane in the corner of the garden.

Anyone who is prepared to get it working, and find it a good home is welcome to it free (yes, free) if they are prepared to collect it from the Croydon (UK) area. I now live in a flat and am QRT so it is of now use to me. In particular, I would like to see it go to a club or a school who could make use of it.

Please e-mail me if you're interested.

>Any comments on the IC-32A? I'm looking for a good dualband HT.

Icom IC-W32A Mini-Review

The never-ending search for the perfect (Icom) handheld has led me to the Icom IC-W32A, a tiny dual-bander. It's getting close. (You Kenwood/Yaesu/Alinco/Standard guys - write your own review.)

As dual-band HTs got smaller, the shrinking real-estate on top of the radio created a problem. It takes three knobs to control the usual volume/squelch combo for VHF, volume/squelch for UHF, and channel/tuning. Add jacks for antenna, power and a speaker/mic, and things get tight on the top of smaller rigs.

Icom's first dualbander-on-a-diet was the W2A back in 1991 (the 24AT doesn't count - it can't tune both bands at once, so it doesn't need dual controls). They jammed all the controls on top of the radio, but they put the VHF volume/squelch shaft so close to the antenna connector that it was hard to turn. The next generation W21A still had three knobs, but somewhat better ergonomics. But the competition was getting smaller still. There just wouldn't be room.

So Icom and the other manufacturers pulled one of the three knobs off the top of the radio, and everybody went off in different directions as they tried to figure out how to double up on the functions of the remaining two knobs. The result is that you probably can't just pick up a friend's HT and use it anymore, unless it happens to be on the right channel and have the right volume setting already.

Icom went through some particularly tortured control combinations in the short-lived Z1A and W31A before arriving at a workable combination in the W32A. Those older radios put the squelch controls for each band on the outside rings of each shaft, and divide the inside ring between volume duty and channel duty. The Z1 forces you to find and push a "function" key before you can adjust the volume (a real stupid idea). The W31 lets you program those shafts to be either volume or channel, and then you have to hold the function button use the opposite function (not as stupid, but inconvenient).

I have a Z1, and kept wishing that they hadn't wasted that outside ring on the squelch control. Sure, squelch is a diddler's delight as a control, but you really don't have to adjust it much. Volume control is much more important.

Well, someone at Icom must have been listening inside my brain, because that's just what they did. The ring on each outer shaft of the W32 controls volume - easy to reach and adjust. The center knob controls frequency (and other functions through the SET menu).

To change the squelch level, you have to hold a function key and rotate the center knob. But, among the 8 levels of squelch settings, there's something called "AT," or as the manual describes it, an "automatic level adjustment with a noise pulse count system." I don't know what that is, but it seems to work pretty well. I'm now happy with the compromise on limited real-estate.

Something else I'm happy about is memories - 100 per band. 100 memories on 2 meters is just barely enough for what I want to do, which is program every 2 meter repeater and simplex channel into a memory (there are 100 of the beasts).

Why do that? Because it's the only way to easily scan all the 2 meter FM channels. The band plan is too convoluted for easy scanning using "band limits." Repeaters down by 145.11 - 145.49 are in 20 kHz steps. Then there's a big gap in the band, until you reach the repeaters and simplex from 146.4 to 147.6, and those are on 15 kHz channels. So you're choices are to scan just one part of the band efficiently, or scan too much of it at 5 kHz steps, very inefficiently. Unless you can program every channel into memory.

There's just one thing I'd like to see in addition that the W32 doesn't do - "bank" the memories, or group them and let me turn banks on and off. The local repeaters would be in one bank, and the rest of them would be in another. I could then choose to scan just the local machines, or all of them. You might have your own favorite plan for banked memories.

(Why do I want to do all that scanning anyway? How do you think I got the reputation for being everywhere at once?)

And now, some of the other interesting touches in this radio:

Alpha names - you can program the display to read an 8-character text name for memory channels. Great for those lesser-used memory channels when you can't remember why you programmed it. But I dread the day when we stop calling it "six-four" and start calling it "channel nine."

Weather Channels - there's a separate "band" for tuning the NOAA weather channels from 162.40 - 162.55. They read out only in channel numbers from 1 thru 10, not in frequencies. And the order is strange: Ch. 1 is 162.55, Ch. 2 is 162.40, Ch. 3 is 162.475, Ch. 4 is 162.425, and it goes up from there. That follows the order of "popularity" of the NOAA channels, but will seem odd to hams used to dealing with real frequencies.

Frequency coverage is wide, but not quite as wide as earlier models (there may be some mods needed for wide coverage):

108-136, with a real AM detector.

136-200 (I haven't tested the sensitivity in the upper reaches of that band,, but it doesn't hear the potent ch. 11 video carrier on 199.25, so I suspect it's kind of deaf up there).

300-400 (again, no sensitivity measurements, and there's an FM detector, although much of the military aviation activity in this band is AM).

400-600. Here, the TV carrier test shows sensitivity up to the low 500's, but it can't hear channel 30 (in Middelsex) at 567.24 - that carrier bangs into my AOR 3000A scanner.

600 - 1000. No hint of the channel 40 carrier at 627.26, but it hears the 800 MHz public service stuff well. The cellular band is blocked (big deal, it's all going digital anyway). It hears a 940 MHz system well.

It's a small radio, but has big buttons. The speaker is on the small side, with only fair fidelity and volume. Transmit audio is kind of bassy and a little muddy.

Transmitting on VHF will finally mute the UHF receiver, and vice versa. It took Icom forever to figure this out. With the W2A and W21A, if you were transmitting on VHF and somebody came up on UHF, you blasted that sound out your transmitter.

You can set different CTCSS tones for transmit and receive. The only radio I've encountered before that did this was the Radio Shack HTX-202. I don't think I've ever really wished I could do that, but now I can.

Automatic Repeater Offsets - Kenwood has done this for years. Icom just learned how to track the radio with the band plan, and shift the transmitter offset up or down depending on what part of the band you're in. But the band plan they used must have been the ARRL's, which still calls for "linear translators" between 145.11 and 145.19. So the W32A won't set an automatic offset there. Icom, get a clue. There are no linear translators except on the OSCARS, so this part of the band is full of repeaters.

But they make up for that faux pas with this feature - when it's time to program a memory, you dial it into the VFO, then push some buttons to start putting it into memory. But part way into that process, as you are selecting which memory channel you want to use by dialing across the existing memory channels, the display SHOWS YOU WHAT'S ALREADY BEEN PROGRAMMED in each channel. Now that is extra useful.

There's a direct readout of battery voltage - at least I thought there was. Turns out it only reads in .5 volt increments, and not when the radio is transmitting. So it's utility is limited. The manual says it was designed to keep tabs on the voltage of an alkaline pack, not the nicads.

Cloning and PC programming - you can. I haven't tried it yet. You need an optional cable.

There is no adapter to charge the battery with the little wall cube charger when the battery is off the radio. Your option is to charge it while on the radio, or get a rapid-charger. The rapid charger is nice, and it runs

on 12 volts, so you can use it in your car. Beware, there's a little, loose plastic insert required to hold in different size batteries. It falls out easily. I know. I lost mine. The replacement is $15.

DTMF "Paging" functions are GONE. Nobody except N1GMV every used them, but they were a great idea. Your radio could be programmed with a bunch of touch-tone codes, and would sit silently monitoring a busy channel until someone send one of your codes. I couldn't believe this radio didn't have the feature, but it's not on the buttons, and not in the manual. It does have CTCSS encode and decode, with 50 tone channels instead of the usual 38.

Also missing is the ability to keep the internal speaker going when you plug in a speaker-mic.

And finally, Icom stole Kenwood's "guide." It's a little scroll of text across the screen that tells you what the function of a button or "set" function is. I felt like a dork using it, but it worked.

There's more, of course, but most of the other functions are the ones we've been using for several years.

So yes, I like the W32. It solved some vexing operational problems, and only added a few small new ones. My W2A cost over $600 in 1991. The W32 street price is below $350.

Gary Pearce KN4AQ - the HT King.

Since that article, Jeff AC4ZO discovered a couple programming bugs -- if you use the "CALL" memory channel a lot, you'll find that when you turn the radio off and back on while the "CALL" channel is selected, some parameters will change -- wrong offset, no PL. Just changing off the CALL channel and back on will restore the correct parameters, but it's a minor pain.

MODS:

To extend the receiver and open up 800 MHz receive (cellular blocked):

-- Turn off the radio

-- Press and hold the band and squelch buttons.

-- Turn on the radio while holding these buttons,
wait for 5 seconds before you release the band
and squelch buttons.

-- Now the receiver should be opened up as far as it will go.

To enable Crossband Repeat:

-- Set the VHF and UHF frequencies you want to use.

-- "Lock" the radio by holding down the CALL/LOCK button
for two seconds.

-- Turn off the radio.

-- Hold down the SQUELCH button (above the PTT button),
the MAIN button and the BAND button.

-- Turn the radio on while holding these buttons. The "LOCK"
indicator (a key icon in the upper right side of the display)
will be flashing, and the radio will be in crossband repeat.

To disable Crossband Repeat:

-- Hold the CALL/LOCK button down for two seconds. The "LOCK"
indicator will stop flashing, unless...

-- if the crossband repeater is in use, holding the LOCK button
won't turn it off. If you must shut it off in that condition,
press and hold the SQUELCH button, then hold the LOCK button
for two seconds, and the "LOCK" indicator will stop flashing.

Use a field strength meter to measure the signal. I think Radio Shack still has an SWR meter that has a field strength position with a small antenna. You should also be aware that the experiment will be hard to control if you are just placing a piece of material in the signal path. Signals will bounce around the room, reflecting off walls and such, and find paths between the transmitter and receiver other than the direct one which you are trying to attenuate with the material. The best way may be to place the transmitter inside a box made of the material.

Good luck.

1029. FS: JCK Neck Microphone

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-11 00:00:00 UTC
From: "John A. Morley" <endeavor@ultranet.com>
Message-ID: <34E278CA.1A2D9B67@ultranet.com>
Source record: 153789

Hi,

I have for sale a JCK neck microphone headset. This item consists of a throated activated microphone, earphone unit and PTT. This item is perfect operations when it is necessary to operate "hands free", such as during public service or sporting activities. This item is brand new, and has never been used. Sells at HRO for $59.95. I will sell for $39.95, and ship anywhere in the U.S.

Best 73's

> allowed in rec.boats.cruising?

Sure it is. We talk about SSB and radios often. What we object to is cross-posting, and this thread (now threads) is a good example of why. These "debates" stray from the subject of rbc and end up mixing us up in all kinds of things from other groups. Cross-posting is a violation of the charter. Very simple.

> You should have removed r.b.c from your
> cross post so that any responses (inc this) would have missed your
> newsgroup.

Maybe. I thought about it, but I decided to leave it on so others could pick up on the idea. It usually takes one or two messages for the group to get on top of something... But basically you are right, it should be removed to stop the cross-posting. BTW, my point was not meant to be unfriendly, just to try to keep the situation from escalating.

> -----OOOo---(_)---oOOO---------------

- Well, I've been using a 528 for 5 years or so, and it hasn't had
as much as a scratch. i take the thing backpacking, etc., and it has
performed flawlessly. It really is as rugged as it looks and
does have great sound. Best thing I did is buy the battery pack
that allows the use of aa cells; they seem to last forever.

If you need any specific info just drop me a note.

Shawn WB6JWB

1034. FS: Standard C508A dual-band HT

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-11 00:00:00 UTC
From: Bill Tubbs <piperbill@jps.net>
Message-ID: <34e29e5d.0@blushng.jps.net>
Source record: 153794

$180.

This is the mini-dual-band HT (about the size of a deck of cards) that runs off of 2 AA batteries. I replaced the 'dummy-load' stock antenna with a new Diamond antenna (much better!) and unblocked the cellular freqs.

A '9' out of 10. I just used this for monitoring in my office, so it hasn't even been outside much. Original box and manual. Still going for upwards of $270 new.

Contact me at:
piperbill@jps.net

Thanks... 73,
Bill, WK6A

What would you give me for a good-working Decatur Hunter
hand held moving unit with two tuning forks plus certificates on
both the tuning forks as well as the unit itsself ?

I also have an MPH K-15 hand held (stationary only) X band
that I would be willing to sell, as well as a kUSTOM Trooper
model dash mounted moving unit (with tuning forks, bracket,
remote, and current certificates).

Welcome, Chuck.
Buy the -> *ARRL Handbook *<- There IS a lot of repetition, especially between ARRL books. Although it will be intimidating at first, it has the benefit of containing something about EVERYTHING. It's the best $30 you'll spend. At the very least it will help you learn the vocabulary you need to ask questions. Basically, its the Yellow Pages of Amateur Radio information.
As for 2m FM radios, they generally vary only in features (fancy CTCSS subaudible tones for remote control, blah blah) which you won't care about. The big names (Yaesu, Icom) are nice but expensive. I was poor when I bought my 2m and I went for Alinco because it was cheaper and have never had trouble. Check them out at http://www.alinco.com/. Also, keep an eye out for some really simple, credit-card sized 2m FM radio's. I can't remember the manufacturer, but they are stripped-down (feature wise) VERY small/light, though I don't know how expensive.
If you haven't found it yet, Ham Radio Outlet is THE place to buy hardware from. They carry everything - http://www.hamradio.com. They have a nifty index of links to all the manufacturers sorted by category (antennas, radios...)
And finally, keep going on the code for that 13 wpm General class; the next 8 wpm will be cake compared to the first five, and it drastically opens up your operating options.

Good luck and have fun.

I'm not so sure about the cross-band repeat. It's probably NOT mentioned in the manual, but I'm almost positive the W32A does it. My Icom IC-Z1A does it, the W31A does it, so I'm sure the W32A will CBR also. I've played with the W32A a little, and I love the W31A. They're both smaller than my Z1A, so my HT of choice would, in fact, be the W32A. It's a fantastic little radio.

Greetings Christoph !

I sincerely appreciate your learned comments. I am surprised at
myself that I didn't go to the trouble of looking up the word for
"backstay". I certainly would have recognized the problem had I done
so.

Interesting comment on the experiment. I tried that once with a
letter that I had written. I plugged into an english to spanish
translation program and then fed the result back through its spanish
to english counterpart. I was absolutely amazed at how well it did,
The one thing that got screwed up was some reference that I had made
to a golf ball. Otherwise it was almost perfect.

I hope the gentleman with the boat can avoid the DM 600 antenna - I
doubt if was any good anyway - Hi.

>Check your SWR. This happens with some rigs.
>
>73, Mark N2FLF

This is a design flaw in the FT-8100. It is not directly
related to SWR. It is simply RF getting into
the PTT line. If you send it back to Yaesu, they
insert a bypass capacitor. Early models
of the FT-8100 were plagued with a number
of bugs. This is one of them. I came
across at least 5 major problems with
mine and sent it back twice. I refused to
send it back a third time and
have since sold mine. I'm sure if I sent
it back again, they would have repaired it
and I would have had a good working rig.
I just got tired of sending it back.
I got a phone from one guy who sent his
back 5 times!

good luck with yours,

Jim W1PID

Source record: 153851

Dear All,
My FT-102 seems to have developed the classic fault with the relays, I think the ones at fault are those on the RF board. My Yaesu agent says it does not stock the replacements any more so I need to find an alternative source. I believe that at least one of them is obsolete now.
Does anybody have any information about which relays to change (I only want to do this once !) and possible alternative relays.
Many thanks for any help you are able give.
Andrew

---------- I have a 440 which I bought used. I found that the processor was
csusing distortion and not readily adjustable. I do not use it at all and
seem to do fine without it.

The adjustment for mic. setting is so critical at the first one and one-half
marks that it makes it impossible to attenuate the mic. push for the
processor.

Do you really think the processor will give you that much more distance/punch?

> help?The freq. 147.970 on receive and 146.370 on TX. the PL sure be 100 and
> the offset is -600.

I had this problem with my ICOM 706 Mark II when I first started
setting it up for use with local 2m repeaters. I finally understood
that the ICOM 706 Mark II allows you to set up the PL independantly on
the transmit and receive frequencies. I made the mistake of setting
up the repeater receive frequency, and then setting up the PL. It
took me a few days of frustration to realize that I had set the PL on
the receive frequency and that I had to set up the PL on the transmit
fequency. I used the A/B switch to get to the transmit frequency,
then set the PL on that frequency. Everything has worked fine after
that. Perhaps you are suffering from the same difficulty?

Richard Jellicoe <gstar@vzinet.com> writes:

> I am planning to buy an ICOM IC706MKII for my father for his birthday.
> Since I know little about ham radio's I am asking the group for some
> help here.

Superb choice. I have an ICOM IC706MKII and an AT-180, and I love
them both.

> I understand that the radio will need two antenna's, one for 144mhz and
> one for 50mhz and hf bands. What is a good antenna for the 50/hf bands,

Look into a DK3 screwdriver antenna. This antenna will tune correctly
on the majority of the HF bands. Alternatively, High Sierra also
sells a screwdriver style antenna. Both are on the Web (sorry, I
don't have the URLs at hand right now).

> I would like to get something really small so he can drive into his
> garage.

You will need to get one of the quick disconnect or removable base
mounts. Any HF antenna short enough to drive into the garage with is
too short to radiate well.

> Do I need to get the AT180 antenna tuner, if so then what type of
> antenna to I need for that??

With a screwdriver style antenna, you do not need or want a tuner.

> What other options do I need to make this a complete mobile package so
> my dad does not need to buy anything eles??

The new internal DSP unit would be a real help. This digital signal
processing unit is included in the MK II's price for a limited time
offer from ICOM.

> Any help with this would be helpfull

REPEATER MODIFICATIONS FOR POPULAR MOBILE RADIOS!

Information Sources has compiled an impressive collection of well written instructions for converting many popular commercial mobile radios into full repeaters. Some of the files, such as the MASTER2.TXT file (included below) which describes how to wire a Mastr II mobile radio for use without a control head, are original works and are copyrighted by Information Sources. The information may not be reproduced or republished via Internet, CD-ROM, or any other media without the express written consent of Information Sources.

The repeater modifications are available for sale on 3.5" HD floppy disk, IBM PC format only. All information files are ASCII text. The following files are currently offered on the Information Sources Repeater Modifications disk:

MICORDUP.MOD Converting UHF MICOR mobile radio into a repeater
MICORUHF.MOD Converting UHF MICOR mobile radio into a repeater
MICORVHF.MOD Converting VHF MICOR mobile radio into a repeater
GE_EXEC2.MOD Converting GE Exec II radio for repeater & 9600 pkt
GE_MVP.MOD Converting GE Custom MVP radio into a repeater
GE_PACKET.TXT 9600 and 1200 Baud packet on GE EXEC II and MVP
GE_MVP.TXT Basic MVP information and 1200 baud packet use
GE_MVPEX.MOD Another 9600 mod for GE_MVP (Complicated!)
MAXTRAC.MOD Converting the MAXTRAC for operaion on 900 ham band
MITREK.MOD Converting MITREK mobile for 9600 duplex packet
MITREK2.MOD Converting MITREK mobile radio into a repeater
MITREK.9K6 Converting MITREK mobile radio for 9600 packet
MASTRPRO.MOD Using GE Master Pro receiver strips for repeaters
MASTER2.TXT Wiring the Master II for use without Control Head
MASTER2.MOD Converting GE MASTER 2 mobile radio into a repeater
MOTOSPKR.TXT Adapting and wiring Motorola Amplified Speakers
WILSON.TXT Programming Wilson/Regency synthesized mobile rigs
BR.COM A simple DOS file viewing program for handy use
BABYRPTR.TXT Convert a Fisher-Price baby monitor into a repeater
LIST.COM Another easy to use file viewing utility program
PKUNZIP.EXE Dearchiving utility program to use with *.ZIP files
PD-203.ZIP Shareware program for POCSAG (pagers) monitoring
PE-205.ZIP Shareware program for POCSAG encoding(transmitting)
\DECODE*.* PD-203.ZIP file de-archived - POCSAG decoding
\ENCODE*.* PE-205.ZIP file de-archived - POCSAG encoding

The following is a reproduction of the MASTER2.TXT file which is included on the Repeater Modifications disk described below offered by Information Sources. The MASTER2.TXT file describes how to wire the GE Mastr II mobile radio for operation without the control head and control cable.

Wiring the GE Mastr II without Control Head

I'm sure many of you out there already use Mastr IIs without control heads but there are probably many who are not too familiar with this radio. There was a recent article about using the Mastr II mobile as an emergency intermittent duty repeater by Terry W. Ellis in the September 1993 issue of Mobile Radio Technology Magazine. The article did not elaborate on wiring the Mastr II without a control head. It can be done. I will not go into the modifications needed for repeater operation. Rather, I will just explain how to wire the Mastr II radio for operation on a single frequency without the control head.

1. Ground (called A- by GE) comes out to pin 30 or pin 21 on J901 the Main control plug on the front panel of the radio.

2. 13.5 volt DC must be connected to pin 29 (called A+ by GE) and pin 24 (Ignition Switch) of J901.

3. The Tx PA supply is separately wired to the big red and black wires at pin 39 (TX+) and pin 40 (TX-) of J901.

(NOTE: Be sure to use fuses for both the PA and the low current Rx and Tx exciter even when testing and wiring on your bench. I was lucky and only smoked a few small traces on the Mastr II front panel board which I was able to bridge with new wire. The damage could have been much worse. Reverse polarity diode protection (like the PA has) would also be a good safety practice for the rest of the radio unless you like the smell of burning radio parts!) (I'd suggest 15 or 20 amp (for lower power testing) on the PA and 2 or 3 amp maximum (for testing) on the Rx and Tx exciter.)

4. The volume and squelch controls can be made with internally mounted 10k trimpots. High side on both vol and sq connect to pin 11 of J904 RX/IF/AUDIO/SQ board. (GE conveniently labels all the pins connecting the major sub-assemblies to the front panel and system board of the Mastr II.) Low side vol and sq connect to pin 12 of J904. Sq center control arm is connected to pin 10 of pin J904. Volume center control arm is connected to pin 13 of J904.

5. The frequency or channel is selected by taking the F# pin to ground. Grounding either the Tx or the Rx F# pin also grounds the corresponding F# channel on the other Tx or Rx. (I guess you could rig the radio for multi-channel use by making a multi-select switch for each channel to ground.)

6. Audio (Speaker) output is taken from J904 pin 19. Pin 18 of J904 (labeled Speaker Low) is connected to ground. Connect an appropriate loading resistor (8 to 20 ohm 1 or 2 watt minimum) to prevent audio amp oscillation if you do not have a monitor speaker connected as with packet, etc. Speaker audio could also be taken from the red test jack as explained in the next step.

7. PTT and mike connections can be taken from the red test set jack, J905. Here is the pinout:

Pin 1: Speaker high (Audio out) Pin 6: A- (Ground)
Pin 2: Speaker low (ground) Pin 7: Microphone high
Pin 3: Regulated 10 volt Pin 8: Microphone low
Pin 4: A+ (13.5v) Pin 9: A- (Ground)
Pin 5: PTT Pin

Note: The radio keys by taking pin 8 on U901 (10 volt regulator) to ground. If you operate the Mastr II WITHOUT the CHANNEL GUARD strip installed you will need to jumper pins 6 and 8 on J908, the Channel Guard plug in card. If you try to key the radio at the meter jack without the Channel Guard board installed you won't get anything except frustration. I was dumb-fuzzled for almost a week before I noticed this one little bridge on the schematic diagram of the front panel board. Lesson: If you intend to use Channel Guard keep the card installed when you test the radio. If you do not use Channel guard, jumper these two pins so the PTT will work properly from the red metering jack, J905.

To kill Channel Guard (e.g. for tuning or testing the receiver) take either Pin 6 of J901 (front panel plug) or Pin 3 of P908 (Channel Guard plug) to ground.

Having a schematic diagram for the Front Panel & System board for the Mastr II is certainly a great aid. It is very difficult to trace out the connections without a schematic since the board has circuit traces on both sides and uses a number of holes to pass circuits on both sides of the board.

I have found an easy place to drill holes for wiring access is on the black plastic front panel main wiring connector. There is an area on outer side of the two big pins to the Tx PA which can be drilled out to pass control wires. I tried to solder directly to the pins on the main connector without much success. I like the internal wiring better. (Note: Molex pins slide very nicely over the pins on the Mastr II front plug. Use heat shrink over the connectors to avoid shorts and add a neat appearance. Also, you can solder directly to the large pins for TX PA by scrapping off the plating and soldering directly to the bare brass pin.)

All the information on the disk is believed to be accurate, however some errors may inadvertently appear and the user assumes full responsibility for the use and application of all the information contained on this disk. No warranties of any sort are expressed or implied. Referral to the appropriate service manuals for the various radios discussed is certainly recommended in every case. The information on the disk presumes the user already has familiarity with the radios discussed, and hopefully, a copy of the service manuals for the radios.

In case service manuals for the radios of interest are not available to the user this distributor has prepared concise written and illustrated operating guides for the General Electric Executive II radios, Master II radios, and Custom MVP radios. Each guide runs about 20 to 25 pages in length and contains necessary schematic diagrams, exploded parts diagrams, tune-up instructions for VHF and UHF radios, and repeater modification instructions with diagrams, as needed. The guides are available for $15.00 postage paid when purchased separately, or for $12.50 when purchased with the repeater modifications disk. (See special pricing offers following the order form, below.) Much of the information on the disk is included in the GE operating guides, but the guides additionally include tune-up instructions, schematic diagrams, and additional helpful hints which are not included on the disk.

The Repeater Modifications disk is available by mail by using the order form below:

From: Nahum Morse <mor55ac@prodigy.net>
Message-ID: <6bt7gaqre1@newssvr07-int.news.prodigy.com>
Source record: 153864

I have an ICOM IC-251A 2 meter all mode (no AM) for sale.
This rig has VOX, AGC, rit, USB, LSB, FM, CW, freq. lock, NB, Dual VFO's, 3 memories & variable 1 - 10 watt output. The rig works absolutely perfect. The face is in good condition. The case is scratch up but is not dented. It has an internal AC power supply and comes with the cord. It also has an input for 13.8 VDC so it can go mobile.
It comes with copied manual & original large size schematic & board layout sheet.
I will take $300 for it without the mic or I will include the ICOM SM-6 desk mic for $350. The SM-6 sells for 100 new. (I bought a new 706 MKII & the mic fits that)
Plus Shipping

Thanks & 73's

The origional enquiry was a marine band radio enquiry, is that not
allowed in rec.boats.cruising? You should have removed r.b.c from your
cross post so that any responses (inc this) would have missed your
newsgroup.

At 310 uA, a 600 mAh battery pack would last for 2000 hours, or many months. Well, not really, but the point is that 300 uA is will discharge the battery very very slowly, on par with the battery's own self-discharge rate. Someone else posted that they were having a problem with short battery life, but in his case the radio was drawing something like 5-10 mA when turned off.

You may already be aware of this:

EZ clone was a commercial software to do this.
Kenwood bought rights to easy clone software.
Ez Clone no longer sells the software.
Kenwood has not started selling it yet even though they mentioned it in
some ads for the radio.
Complaints should go to Kenwood.

>
> Good news is that Yaesu (562-404-2700) will take care of it under warranty, and I also found out they came out with a low profile power button which will solve the other dead battery problem I have (radio turns on by accident inside a briefcase, pocket, backpack,etc.) I was about to cut a slice off the button to make it lower...
>
Jose,

I had the same problem of higher than normal current draw when turned
off... found it after warranty over.
Solution on this end was when turning off , to hold the off button for
abt 1-2 sec after off (not just hitting off and releasing).
This solved the problem... guess the curcuit just needs longer to really
shut down on some.
TJM
PS.. if you need a short button, give the model/serial # on Yaesu web
site thru email tech service and they will mail them out.

Been thinking of buying a linear amp. Like the specs of the QRO
HF2000. Called them twice today but got answering machine both times.
Learned that it is both QRO Technology & a Real Estate agency. Can't
help but feel that if I buy and unit fails I will have a very hard time
getting an answering machine to solve my problems

Does anyone have any info on this company and can anyone recommend one
or more alternate amp manufacturers.

Very thankful for any and all info received.

>Ed

The "new adaptor" you want...you mean power adapter so you can run it from a wall socket? (commonly known as a "wall wart") If so, Radio Shack sells a 3/4.5/6v @800ma adapter that includes the proper power plug. It is a regulated supply with good hum supression. I use one at the office with my 2010 and it works just fine...the original stays at home.

Part # 273-1666 goes for $22.99 use the "blue" plug end and make sure the tip is MINUS.

the manual is 20 pages long (the English language portion) and I don't have access to a free copier. So if someone else can't copy it for you for free, I can do it for you for the cost of copying and mailing (about $3.00 total). Email me, replace the NoThankYouSpammers with "dac" (no quotes) in my address above.

Don

1100. Re: Icom IC-2000H mod wanted.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-11 00:00:00 UTC
From: bandit@domain.com
Message-ID: <34e144e5.2409910@nntp.ix.netcom.com>
Source record: 153923

I just purchased an Icom 2000H yesterday. It's a great radio! Better
price than the Yaesu FT-2500 and it does AM aircraft.

Expansion Range:
118 Mhz - 174 MHz RX
138 MHz - 174 MHz TX

Remember that the electronic circuits can only tune a 20-30 MHz window
around the original center frequency (tuned at the factory) you may
have better performance at the top or the bottom ends of the tuneable
range.

1.) Remove power and antenna.
2.) Remove Screws and open the radio.
3.) Locate Control Board. (front Panel)
4.) Locate and CUT DIODE D8
5.) Reassemble the radio.
6.) Reset the microprocessor (ALL RESET, see user manual)

In case you are having trouble locating the diode, it is underneath
"J3 and J4". I modified mine with no problem.

Be careful, and happy TX'ing.

From: shanehendr@aol.com
Message-ID: <19980211074101.CAA19157@ladder03.news.aol.com>
Source record: 153925

Hey gang. Just passed my tests tonight - tech/novice written and 5 wpm code. I will be in the market for a good, dependable HF rig very soon. Used is fine with me. I can only afford so much however, as $1000 radios are a little pricey for me right now; somewhere around $500-600 would be better.

My brother (extra class license) will be helping me buy the radio; he will be able to help me out with any models, specs, and prices you offer. I would prefer a radio that has a 500 hz CW filter if at all possible (like I said, I'm broke). Brother is giving me a keyer and some other junk.

Thanks,
Shane

> http://www.latech.edu/~riw
> Go there if you need my email

The video heads could indeed be the problem,however I would take it to
a Sony authorized repair shop or at least a shop that specializes in
camcorder repairs for a second opinion. There are several things that
can cause a bad picture on play or record other than heads or alignment.
Many of the repairs I do on Sony,Canon and Hitachi camcorders are due to
leaky smd electrolytic capacitors,sometimes requiring the replacement of
dozens at a time,as well as cleaning and repairing the printed circuit
board. We stock most camcorder heads,so if there is any doubt about the
cause,we try a new set to prove it before estimating the repair,this
enables us to give the customer an exact to-the-penny firm repair price.
You could make a recording on your camcorder and try it in a friends
unit,if the recording is good,that will eliminate the heads as the
culprit,as the same heads are used for both play and record. If the
recording is bad,it still doesn't prove the heads are the cause,again
you will need a qualified second opinion.Good luck my friend.

Source record: 153928

To get back full band transmit, just do this:

1- Open top panel by removing 2 screws.
2- Cut the W1 jumper, green wire.
3- Put the top panel back.
4- Press and hold MR while powering up.
5- When the display goes funky, repress MR.
6- You now have transmit from 136-174.
7- Remember this is not legal to use.

You will lose your memories doing that, beware!
I wonder what the W2 jumper does, anyone knows?

> Can I use it as a x-band repeater? And how?
> What is the cw ID. for and how to use it?

The FT-50 cannot do cross-band repeat. There radio operates on just one frequency at a time. To do cross-band repeat you need a radio that can operate on two frequencies simultaneously, like the FT-51 handheld or most mobile rigs.

The CD ID is for use when the radio is set up transmit on its own. This could be when using the mode that automatically polls another FT-50 to see if it's nearby, or for the auto-answerback paging mode.

>station use now, but could see transferring it to a car later.

Thank you to all the people who posted, or wrote, their advice. I thought I'd let you know what I eventually did: I bought a used Icom IC-2350H.

It is a dual-band radio, in the sense that it will receive 2 m and 70 cm simultaneously. It will do cross-band repeat. These are two features that many people recommended highly.

However, it will not receive two VHF frequencies or two UHF frequencies simultaneously - each half of the radio is dedicated to one band. And it lacks some features that are now common, such as a removable front panel. It can have CTCSS decoding and DTMF decoding cards added, but this unit lacks them.

All in all, it seems like a good solid dual-band radio.

Dave

Now Walt... you know that's not true... Americans are quite comfortable having sex... so long has each partner has a recent blood test, notarized complete sexual history, industrial grade condoms, the lights are out, blindfolds are worn, and it's between the hours of 11:30pm and 11:45pm... there... see we're not uptight at all!

From: Bill Brannick <WmLB@prefer.net>
Message-ID: <34E3C013.DF78A5A9@prefer.net>
Source record: 153708

Not sure this is the right group or not..

Consistent, I think, with most articles that I have read, my station ground is a 8ft ground rod which is located within a foot of the exterior wall separating my station from the outside world. I have all my ham gear tied to a copper buss bar at the back edge of my bench. This bar in turn is tied to the the ground rod outside. The length of that conductor is less then 4 feet.

As it happens there is a copper pipe/hose bib projecting from the exterior wall very close to my station ground. This pipe is the source of the ground for the house electrical power system. There is a 8ga (or so) conductor running from that pipe over to the power distribution panel.

The question.. is there a NEC (National Electric Code) requirement that dictates that I tie these two grounds together. and .. if that's not the case, what are the trade-offs for doing it or nor doing it.?

Thanks for any suggestions I might get on this one..

Bill

I am a scanner user and have been unable to find an active chat room for scanner users. To fix that problem I have created my own chat room for anyone who loves to scan as much as I do. It is about time we have a room for all scanner users. While you are chatting you can also be scanning. This chat room will be good for many things of interest: New frequinces, New scanners, Who has what scanner, New laws, Scanner stories, Trading freq, Sending freq, Sending pictures, and many other things. As of 02-12-98 there have been 6 ppl come and visit. Everyone I have met has been on around 9:00 p.m. central time.

TO COME AND VISIT AND CHAT COME TO: Irc.dalnet #scanning

TRY TO COME IN AROUND THE TIME POSTED ABOVE IF POSSIBLE.

I LOOK FORWARD TO MEETING SOME OF YOU!!!!!!!!!!!!!!!!!!!!

> 2182 kHz?
>
> Paul
>

Paul,

I would seriously advise AGAINST using the IC-706 as your primary
marine HF radio. There are a couple of reasons:

1) There may be the usual legal "problems" especially if the radio
is used in US territorial waters. In other words, the radio is
not type-accepted for use outside the amateur bands (MARS/CAP excluded).
No, they probably wouldn't bother you in an emergency......

2) The radio does not have the new Coast Guard mandated DSC (Digital
Selective Calling) circuitry. In a few years, the old 2182 kHz and
even the CH-16 monitoring will be gone - replaced by DSC. The
Coast Guard has info their web page about this.

3) The radio IS NOT constructed for a salt water environment. It is
NOT sealed. In a shorter time than you think, the inside will be that
wonderful green color, and operation will become spotty and eventually
fail (probably at the worst time).

4) Operation under duress. Now, when the s*#t hits the fan, are you
going to have your wits about you to tune the radio, select the right
memory, etc., or would you rather just be able to go over and hit one
red
button, be automatically switched to 2182 and have the DSC send out all
of the important info ?

Many of the HF marine radios out there now will operate in the ham
bands.
One of the more popular is the SGC line. They have many different

control
heads to allow ham-type operation as well as the more popular
channelized
marine operation. The radio does support more that one control head at
a
time so you may be able to mix and match - typical marine style on the
bridge, and a ham type in your quarters. Combine the SGC radio with
their
EXCELLENT SG-230 tuner, and you will be able to load up your back stay
or a 16 - 32 ' whip without any problem. Your signal will be loud.
BTW, you will need a tuner anyway, so your difference in price may be
between the IC-706 and the SGC-2000 may be less than $500.00.
Check with some of the dealers. SGC runs package deals from time to
time.

Just my .02.

73 and Good Luck,
Gene K1NR/3

I have seen it mentioned on this NG that there is a defect in some
radios in the circuit in the area of the power button. Correction of
the defect involves changing a resistor in the power button circuitry.
This is a fault known to Yaesu and is corrected by the importers for no
charge.

The Benny Hill show in the US was the variety like UK version editted to
a "Laugh In" pace. The two show versions were quite different. FOr
those in the UK, it turned Benny Hill into Kenny Everett.

Even none English speaking Europeans find Benny Hill funny, is it too subtle for the US or something?

Why was Mr. Bean such a big succes in the USA? It's quite similar, it would have been better with Hill's Angels ;-)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-12 00:00:00 UTC
From: katkey007@aol.com
Message-ID: <19980212135501.IAA00400@ladder02.news.aol.com>
Source record: 153749

I am in need of an Operating manual for the Band Scope SM-230.
If you have one and are willing to photocopy it, I'll gladly pay for your time, cost and postage. What I especially need to know right away is the nomenclature for the eight (8) adjustments on the left side of the unit - that would be a big help for the present time.
Also would like to obtain a copy of the Service Manual.
If you don't have either of these manuals to photocopy, maybe you know where I can purchace them.
Thanks,
Bob, N1KPR

1159. FT-101 opinions please

Date: 1998-02-12 00:00:00 UTC
From: "Peter E. Orban" <Peter.Orban@thisnrc.ca>
Message-ID: <34E2FCF5.41C6@thisnrc.ca>
Source record: 153750

I might be looking at a FT-101 as a first radio (I am a new ham). I read
the previous thread on this topic and checked out the FT-101 home page
as well. A couple of questions:

How should I check for the condition of the finals?
The radio is the Z variant. Am I going to miss any bands or frequencies?
Is it easy to modify/add those frequencies?
What is a fair value for such a radio?
Am I totally nuts and should I look for something else?

Thanks, Peter, VE3PEY

Source record: 153751

> Furthermore, a special hardware device (which contains a radio
> transceiver) is required. I believe it was part of the EZClone package.

This is incorrect. The EZ Clone for the V7A has a special serial cable with it. The little RF interface is not used (I think that is for the TH-79A???).

> I was somewhat surprised to learn that the V7A has nothing approaching a
> serial port for control/programming purposes.

The little capped TNC port on the radio's front panel acts as a serial interface for the radio.

The software is limited, but works extrememly well. It's hard to find now, but worth it if you need to do a lot of frequency work. Kenwood is supposedly working on their own version to be given away. Start holding your breath....now!

:)

Paul Janzen <matrix@vzinet.com> writes:

> I want to get the MK-II for my dads birthday. But he will want to use it
> mobile but he can only use 20 inch or less antenna.

Please clarify this requirement. Does this really mean that the top
of his car is 20 inches below the entrance to the garage? Or does
this mean that there is some legal or spousal limit requiring an
actual 20 inch antenna? :-)

For HF antennas, bigger is better. Most of us HF-ers do park our
vehicls in garages. There are three general forms of solutions to the
general problem you describe:

1) Remove the tall HF antenna from the car before driving into the
garage. I personally use this one.

2) Use a short antenna which supports a fold-down feature, and fold down
the antenna before driving into the garage. Comet makes two
different HF fold-down antennas which support multiple HF bands.
They are pretty short (too short for good HF radiation, in my
personal opinion) but do work on their specified HF bands.

3) Use a medium length antenna mounted on the trunk so that the top of
the erect antenna is low enough to permit the vehicle drive into
the garage without touching the antenna. Depending on what kind of
car your father drives and where/how he mounts the antenna on the
trunk or on the bumper, this technique may be possible. Again, see
the several Comet HF fold-over antennas, the assorted coil wrapped
Valor (TM) and HamStick (TM) mono-banders mounted to the bumper,
the Hustler antenna line mounted to the bumper, assorted short
BugCatcher (TM) mounted to the bumper, and possibly the shorter
screwdriver stule antennas mounted to the bumper.

> Which I understand
> is a problem with 1mhz - 50mhz. I was hopping the at180 antenna tuner
> will allow use of a small antenna but have not been able to find out.

Nope. The AT-180 only handles a maximum SWR of 3:1, which is an
extremely limited range for an automatic antenna tuner. The AT-180
will tune a 9' CB (CB bands are about 11 m) whip to the 10 m and 12 m
bands, but nothing else.

The ICOM AT-H2 and AT-H3 are tuners specifically designed to
automaticaly tune a whip mounted on a vehicle's bumper. ICOM sells an
excellent whip which pairs with one of the two tuners. The

tuner/antenna pair sells for about $800 as I recall, which I personally thought was a pretty steep price. I ended up buying a screwdriver style antenna for less than $200, which has the added benefit of not requiring a tuner at all, while permitting operation on all HF bands.

My personal recommendation is a screwdriver style antenna mouned to the bumer, with a Hustler brand quick disconnect on the whip. This permits the lower portion of the antenna to be securely mounted, and it takes 5 seconds to pop the top portion of the whip off the antenna to permit driving into the garage.

NIST *is* the legal standard in the US. What they say *is* by definition
true. You can build your own atomic standard, of course, but what phase
will you set it too? IE what time is it? You still have to reference to NIST.

Paul, an antenna that short on the HF bands will have virtually no
efficiency, IE it won't radiate a signal worth spit. About the shortest
thing that works well enough to bother would be at least 60 inches
tall, and something in the 8 foot to 13 foot range will work *much*
better. HF mobile (other than 10m) requires large antennas. It's
the nature of the beast.

I think you are going overboard the other way. Certainly there are
times when high power is warranted, but in most cases 100 watts
is plenty. As one gains operating experience, it is possible to be
effective with much less power than that. 5 watts will work the
world, but you have to be a pretty clever operator to do it. And
the best way to become clever is to start out with a bit more
than 5 watts of power.

1177. Icom IC-W32A Crossband Repeat

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-12 00:00:00 UTC
From: ormos@mcs.com
Message-ID: <6bvdasdtu1@Mars.mcs.net>
Source record: 153768

In article <6boc7t$dcu@bgtnsc03.worldnet.att.net> (posted to rec.radio.amateur.equipment on Mon, 9 Feb 1998 20:58:26 -0500), "Richard O. Kinkead" <richard-kinkead@worldnet.att.net> writes:

= However, the W32a does not do one-way x-band rpt like the FT51R.

I haven't tried crossband repeat yet, so I don't know if this works, but...

Couldn't you achieve one-way crossband repeat by enabling the "Tone Squelch" feature on the receiver for the band on which you want to transmit (i.e., the receiver *opposite* the band in which you don't want to transmit), and selecting for that receiver a CTCSS frequency that nobody uses?

Suppose you want to receive signals on 70cm, and retransmit them on 2m, but not vice versa. Couldn't you enable "Tone Squelch" on the 2m receiver and set the receiver CTCSS decoder to some oddball frequency? Then, presumably, the 2m receiver would never open up.

The IC-W32A provides independent transmit and receive CTCSS frequency selections for each band, so the 2m transmitter could still encode a desired CTCSS tone which differs from the oddball selection used to effectively disable the 2m receiver.

Hey Andrew

I have the Butternut in my yard as my first and standby ant. about to
finally get "more serious antenna's up myself.....

It has been up for 8 years and as far as vertical's go is a great one and
lots of fun.
I only run 100 watts. I live near a river bottom so ground water is 18"
under ground this probably helps considering my radials have been mowed and
stepped on by horses the whole time.
I have used old hy-gain 14avq's and 18avq's many years too as secondary ant.

I'm like you..... SPEND THE BUCK'S ELSEWHERE THE BUTTERNUT IS FINE...!!!

```
Upcoming Gordon West Radio School Classes
=========================================

Gordon West, renowned author, teacher, speaker, and amateur radio
operator, will be hosting a Radio School licensing and upgrading class in
Orange County, California (for other dates and locations, see the end of
each class description).

Two classes will be held at Fry's Electronics, 3370 East La Palma,
Anaheim, CA 92805, one for the No-Code Technician License, and one
specifically for General Morse Code (13wpm):

Weekend Technician No-Code Class
--------------------------------
Date: Friday 6th, Saturday 7th & Sunday 8th March

Everything you need to get your Technician No-Code FCC amateur radio
license will be covered in this exciting two-and-a-half *full* days of
class! Class starts on the evening of Friday 6th March, and continues on
both Saturday and Sunday.

The exam questions are taken from the FCC Novice Element 2, and Technician
Element 3A question pools, all of which are covered in the exclusive
Gordon West Technician No-Code Plus text book. All questions are multiple
choice, exactly from the book. Use the pre-study materials to help make
passing the exam on Sunday afternoon even easier! Your license could be
granted in just 72 hours.

Students receive the home study package, containing the Gordon West
Technician No-Code Plus text book, theory cassettes and computer program.
Included in the class fee are beverages, lunch (Saturday and Sunday), live
equipment demonstrations and free workshops after class on Saturday.

Other Technician No-Code classes:
Sunnyvale, CA: May 29, 30 & 31
Huntington Beach, CA: June 19 & 20 (Two days for kids)
San Fernando Valley, CA: June 26, 27 & 28
Alameda Mariners Class: July 24, 25 & 26

For more information, or to register for the class, please call Suzy West
at (714) 549-5000.

Weekend General Morse Code Class
--------------------------------
Date: Saturday 7th & Sunday 8th March
```

Are you a terminal Tech? Have you tried to pass the General class code test before, on your own? Have you "hit the wall" at 10 wpm, and need help over the plateau? The General class code weekend course is your answer to the Technician class blues. You will pass the General Class Code and Theory tests, in class, Sunday afternoon, while your spouse and friends pass the No-Code Technician exam in the next room!

Build your code speed, now, to 7-8 wpm with Gordon West's code tapes. This is the speed ticket for entry. We'll do the rest in class together, starting the morning of Saturday March 7th, 1998.

The exciting and entertaining course lasts two *full* days, and includes beverages and lunches, a Saturday night "Operating Session" with Gordon West and the No-Code Technician students, the Gordon West General Class Theory text book, and the 7-15 wpm code cassettes. If you have never copied code before, be sure to ask for the 0-5 wpm tapes too. Several General Class theory review sessions will be held throughout the weekend.

The only prerequisite for this class, is that you be able to copy 8 wpm by the start of class on Saturday.

Other General Code weekend classes:
Fry's Sunnyvale store: May 30 & 31
Fry's Woodland Hills store: June 27 & 28
Fry's Oregon store: August 1 & 2
Fry's Dallas, Texas store: Nov 7 & 8

For more information, or to register for the class, please call Suzy West at (714) 549-5000.

We hope you can make it to class.

> KU4NF

Actually, the little DIN connector on the TM-V7A _is_ a serial port...or
at least with the EZ Clone software one can up/download the memories
directly with the cable that (used to be) was supplied with the EZ Clone
software. Their sw was not perfect, in fact, I had a lot of problems with
it- although it worked a few times in fact. When they stopped selling it
they stopped supporting it. I am anxious to see Kenwood come out with a
viable version since they advertised the radio as being up/downloadable. As
far as I can tell, the software license still applies and 'emailing' a copy
of it would violate that I would think.

>thanks
> alon.b (alon@135.kef.co.il)

I judge from your URL that you are not in the U.S. where it is illegal
to use scrambling and encryption on the amateur bands.

Simple scramblers can be made or purchased as a module that can be
interfaced to a non-SSB radio, such as FM. Try searching the web.

MX-COM is the company that makes many of the simple scrambling chips
and modules and Transcrypt International also manufactures scrambling
modules. Both of these are U.S. companies.

From: nitz@selectsa.com
Message-ID: <6bvvn5$1i4@clarknet.clark.net>
Source record: 153782

A recent 'for sale' post on this group regarding some 'pulled' 8877 tubes got me thinking about this question:

Since the Ameritron AL-1200 and Ameritron AL-1500 are practically identical, is it possible to switch the 3CX1200A7 tube with the 3CX1500/8877, turn the fan speed up to high, and esentially operate it as an AL-1500?

Are there any other internal differences between the AL-1200 and AL-1500?

Thanks for your help.

Even though one of my TV's is "off", the switching power supply stays connected to the line and operating all the time. Wreaks havoc on HF. The TV is made by Funai.

You said you TV's were off but not disconnected from the line. Try either completely unplugging anything that might have a switcher in it, or try turning off your house breakers one by one to isolate the noise (if it is indeed in your house).

>combination.

In my opnion, the software is well worth the money for the reasons you have anticipated. It makes the programming a breeze, and adds the benefit of allowing you to maintain different data files for travel. I have seen reports of people losing their squelch setting on the VX-1R, but I believe that is due to a bug in the firmware, not the ADMS software. I could be wrong. In any case, the squelch settings can be restored. This can be done by downloading a file from the RT Systems web site at www.rtsars.com, or manually if you record the settings from your radio.

Personally, I have never had a problem with the software. As for updates, RT Systems puts patch files to the latest version on their web site. I think you would be satisfied.

regards, Don (KE4KYO)

Greetings,

I'm rounding up information to purchase a legal limit antenna tuner. 160-10 meters. Will be running about 1KW primarily CW. Don't want to have problems on 160 meters. The Tentec 229 and 238 have been suggested. I'd be interested in other opinions and experiences with legal limit tuners.

Furthermore, a special hardware device (which contains a radio
transceiver) is required. I believe it was part of the EZClone package.
I wish I knew more about it (I'd build one if I did), but I only
recently acquired a V7A.

I was somewhat surprised to learn that the V7A has nothing approaching a
serial port for control/programming purposes. Icom radios with
C-IV interfaces have a tremendous advantage in this respect, IMO.

The big problem with the HRO 500 was poor dynamic range. At that point in history, it was not generally understood how to make a solid state receiver with good dynamic range. That's why Drake took so long before comming out with a fully solid state design.

Well for fsk a 500Hz filter is the best. In the case of the TS450, I don't know of any third party filters that will fit in the radio with out modifying the radio, so the Kenwood filters are for me the best solution. In general its best to get selectivity as close to the front end of the radio so that would argue for putting the filter in the 8.83Mhz IF. But the shape factor of the Kenwood 500Hz filter for the 8.83Mhz IF is not as good as the one for the 455Khz. So I chose the 455Khz IF filter. If I was a very serious digital mode user I would put 500hz filter or even narrower filters at both IF's.

As to the question of what FSK is used for, it's used for all the digital modes except CW (Amtor, Pactor, Packet RTTY etc.)

George, I have the 270 Hz filter which is "very" tight but works wonders with high QRM contacts for RTTY, It will also work with Pactor/AMTOR modes if you put the IF shift about the 3 o'clock position - you'll have to experiment a little to get this to work but that's about as tight as you can get the Kenwood without going to a DSP (digital signal processor like the JPS unit)

Good luck, John, N4SJW

Hello!

I have an 8-channel Motorola Maxtrac/Radius VHF-Lo Band radio. I have 4 channels programmed to Red Cross frequencies, and used the RSS to successfully program the other 4 channels to local 6 meter frequencies. Is this radio capable of tuning both sets of frequencies without re-tuning the radio? At present, it transmits AOK on the Red Cross frequencies, but does not on the 6 meter channels. I did notice during programming, that the RSS displayed a caution/error message on the need to possibly re-tune. Any suggestions or assistance would be greatly appreciated on this. Thank you in advance!!!

Hmm. From an illustration in a german-language book, I derive that the
`Achterstag' is a single stay that runs down from the top of the mast to
the stern along the centerline of the boat. `Backstagen', of which there
are two, run down sideways, aft of the shrouds, but still forward enough to
be in the way of the boom. Therefore they are kept slack on the leeward
side and need to be adjusted each time you change tack. I guess they're
not very common any more (probably because modern rigs leave room for a
fixed backstay).

As I said, this is just what I'm gleaning from a little figure and may
not be accurate in general. Also, I don't recall the english term for
`Backstag' (`running backstay', perhaps?)

Hi Charlie OM,

I consider my HRO-500 to be a jewel. It is an
excellent example of the transitional era between
tube and transistorized receiver designs. It was
intended as a surveillance receiver almost certainly,
and, together with its complex construction with lots
of metal castings, was very expensive. I use it
as a general-coverage receiver, as well as on the
air (mostly on CW).

Source record: 153595

I have owned both the 706, the 706 mkII and the TS50. The 706 is head and shoulders a better radio. The 706 has many features that the TS50 doesn't have, the 706 sounds better on both transmit and recieve, the remotable head is really great for todays cars and the operation is more intutive. If you can afford the 706 mkII it sounds better yet than the 706, puts out more power on 2 meters does split bands for satellite and is well woth the extra money.

I have two matched sets of CW filters that fit the Kenwood TS-830S (and 520, 530, 820, etc) available for sale. Both sets are electrically OK and cosmeticaly mint.

The first set is the International Radio #98 400Hz crystal filter for the 8.83 Mhz IF front end and the #99 400Hz mechanical filter for the 455kHz IF. These were purchased in May, 97 and I'll Take $175 for both, shipped.

The second set is the original Kenwood 500Hz crystal YK-88C for the 8.83 Mhz IF front end and the 500Hz mechanical YG-455C for the 455 hz IF. These are new in the box and unused, $125 for both, shipped.

1246. Vox for FT50R

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-13 00:00:00 UTC
From: Steve Carpenter <manager@vnet.net>
Message-ID: <34E4EA07.49232DDE@vnet.net>
Source record: 153604

I just got the VC 23 vox headset for my radio. PTT seems to work fine, but I can't get anything to transmit on vox. All the instructions I got were on the back of the box and it said plug it in, switch to vox and set the sensitivity until the transmitter comes on. Mine does not.

Anybody got any ideas??

Apparently there is nothing to set on the radio. I've tried adjusting the SQL but I got no improvement.

Thanks.

From: Louis Bybee <louisb@datacomm.com>
Message-ID: <34E50ACB.28F9C391@datacomm.com>
Source record: 153623

I am not sure of the results on a RF level, but the NEC requires that you have your electric service grounded by two sources. The water pipe if metallic, is the preferred primary method. In order to qualify there must be at least ten feet of the water pipe outside the house in direct contact with the earth. The grounding point should be within five feet of where the pipe enters the dwelling. In many areas because of poor soil conditions, many inspection authorities require two ground rods spaced at least six feet apart connected by the same ground wire and considered as one ground source.

From an electrical design standpoint, all grounding electrode conductors should be run to the same point, (the service panel) and all equipment grounds should also terminate at that point.

The problem with radio gear as I understand it, is that a long ground wire can become a radiating element, thus the need to keep it as short as possible.

All of the commercial broadcasting installations I have done electrical work on have a substantial ground grid (underground) bonded to the electrical service, with the connection to the transmitter ground being as short as physically possible.

I am sure that some of the more experienced hams on this news group could give you more complete RF level grounding information, or first hand reasons why some layouts work better than others.

Source record: 153629

Hi Lou,
First, to the best of my knowledge, the NEC requires all grounding systems of a building to be bonded. This is without exception. the NEC also states that the earth shall not be the sole connection between the ground systems.
If you have two grounding systems with separate electrodes, a potential between these systems is possible. The voltages between the two systems can be high enough to cause damage to equipment and harmful to personnel.
Currents circulate through the earth. These currents cause difference of potential. Differences of potential are typically quite small of a limited geographic area. However, during storms, charge clouds create equal but opposite charges to form near the surface of the earth(capitor effect). This formation of charges can create considerable potential differences over a small geographic area.
As the charge clouds move over the area, the potential of the earth underneath the clouds changes. Remember, earth electrodes do not necessarily have a zero potential, but maintain a constant ground potential throughout a facility. If two separate ground systems are present, two different ground potentials are possible. For example, lets say some tube-head grounds his output and antennae to a "isolated" ground. He receives the power for his transmitter from a source that has a ground connected to the power system, another ground rod, and maybe a cold water pipe. A storm comes through and elevates the area around his antennae.
The output ground of the radio is at one potential, the chassis is at the ground potential of the power system. Damage may occur from this potential difference.
I tried not to write a book, but you know how us electricians are, 42+ years with L.U. 82 IBEW.

73,
John

>I have a FT-530 and I'm interested in the FT-51R and was wondering if you
>can display battery voltage in the sub band like on the 530. The 530 can
>display the battery voltage or the clock.

Yes and no. You can display the battery voltage as a "set" function -
do F+SET, then turn the knob until you get function 25. That's battery
voltage. It takes over the display, though, so you can't see any
frequencies. By default, pressing PTT cancels the set function and
returns you to the normal display, but there is a way to continue
displaying voltage during transmit (to check voltage drop).

There is no clock.

>Also has anybody done the mod for the 51R and what is the new TX/RX ranges.

Can't help you there (mine is unmodified).

Source record: 153637

Hello Bill, I am an apprentice electrician, and I have the NEC electrical code book right here in front of me, I will give you an excerp of article 810, which deals with amatuer radio bonding and grounding. First of all, it is OK to have a separate grounding electrode (know as ground rod) for the station equipment, but not a requirement!!! The code calls for grounding of the station equipment to the nearest accesible location, ie. metal water pipe, service enclosure equiment, metal service entrance raceway, or the house grounding electrode itself. Now that is the requirement for grounding. HOWEVER>>>>>>>>

IF: In your case you have sunk a separate grounding electrode for your shack...SO>>>>>article 810-21(j) reads as follows

810-21(j)-Bonding of electrodes. A bonding jumper not smaller than #6 copper or equivalent shall be connected between the radio and television equipment grounding electrode and the power grounding electrode system at the building or structure served where separate electrodes are used.

So what does this all mean? Well lets see, first of all, according to the code, you dont need a separate ground rod for the station equipment, you only need to bond the equipment to a water pipe or some metal associated with the service entrance equipment. In your case, you have decided to use a separate ground rod, which IS permissable by code, but now that you have opted to do so, you must abide by article 810-21(j) and connect tthe station electrode to the power system electrode with a #6 wire. That may be more work for you than yoking the station electrode and connecting the station ground to that water pipe nearby you mentioned.

you asked if it is OK to jump the electrode to the water pipe, WELL.......I might be interpeted that the water pipe is equivalent or better than a #6 wire, so effectively you are doing the same thing that 810-21(j) says, so it seems. But who really knows what they mean by that. Being in this business, this type of thing is ALWAYS subject to interpetation. In my opinion, I would insist highly that in some way or another that there be some kind of common connection bewteen the 2 separate grounding electrodes!! This is very important. So I would say your options are these, to conform to the electrical code...1. disconnect the separate ground electrode you put in, and go to the water pipe only, or 2. jump the electrode to the water pipe (and hope that satisfies 810-21(j)).

I hope this answers your question......73 LOU

Since I read most of the posts, and found that nobody was giving information you would find helpful, and since I have no idea personally where to look, I would suggest a library. They often have many volumes available for all sorts of ham equipment, and electronic equipment in general.

Good luck.

wildwolf>Since these antennae cost approx 600 DM would like to build themselves.

Hey!

Our club bought a Yaesu FT-736 and has equipped it with 6 meters and 23 cm. The 23 cm unit seems to be able to handle TV as well. Can anybody tell me what the signals should be to interface these phono jacks? They seem to be in and out but what carrier frequency? Am I to choose AM or FM when I modulate the carrier? I will greatfully appreciate any info!!

Good Morning, Andre,

If I correctly understand the prefix "back" in a nautical context, it
would mean "forecastle" or "foc'sle" as we say. If that's the case
then wouldn't the german word Backstag translate to Forestay?
Continuing with that thought, then it's no wonder that languages can
become so confusing. Anyway, makes a nice conversation item.

I worked on a HRO 500 6 months ago. They were a good example of early solid state receivers , but Hammurlund, Hallicrafters, Collins and Drake all offered good rigs of that vintage too which were all solid state. I personally found the operation clunky and not of the best audio. If you want a receiver with that desired quality I'd consider a rx with a broader range of selectivity an dbetter audio output. (I would prefer a Collins 51JX over the HRO 500!)
On cw the HRO was a weak performer. On SSB it was fair.

Good luck on the quest es 73 steve

1309. Kenwood TM-V7A Half Duplex mode

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-13 00:00:00 UTC
From: Steve Meserve <stevenme@microsoft.com>
Message-ID: <6c1ne0$56g@news.microsoft.com>
Source record: 153667

Has anyone found a way to toggle Full/Half Duplex receive on the Kenwood TM-V7A? It seems to only support Full Duplex which can be a problem.

My Alinco DJ-580 HT has the ability to put the subband into standby when transmitting on the main band (i.e. Half Duplex), or receiving on the subband (i.e. Full Duplex) while transmitting. While not used often, this is an essential feature, in my opinion.

The real problem arises when using a cross band repeater (lets say input 146.490, output 443.000). My input (tx on the main, or left band) is repeated on 443.000, which is being received on my subband (right band), thus I get some nasty audio feedback. Kenwood's solution is to turn down the volume on the subband while xmiting, then turn it back up to receive. I think that's a low tech solution to a high tech problem! Any thoughts?

Is it permissible to _ISOLATE_ the power and RF grounds via a sutiable
transformer? This would remove the noisy utility ground (common) from
the low-level signal ground (the rcvr/ant.). If this is permitted, is a
transformer required, or could the station ground still be separate from
the utility power ground?
thanks. Dick (K9FFK)

Hi James,

Without checking, the fil transformer may have to change. For certain, though, on the AL-1500 there is a grid current trip, which judging by the number of times I've tripped mine you really, really need. Or you'll really, really need as many inexpensive 8877 pulls as you can get...

Hi Bill:

From a lightning protection standpoint, by all means, securely bond the two ground together, preferably outside the house. The basic principle involved is keeping all grounds at the same potential during a strike event. That way, all "grounds" in your house rise up together in voltage and fall together when the transient is over. The potential difference across a piece of equipment is what kills it, not the absolute voltage.

If you don't tie the grounds together, you will probably get a voltage differential between your ground rod and the water pipe / electrical system. During a transient, this will cause a large voltage to appear between the third wire of the equipment's AC cords, and the chassis ground you have provided - smoke!.

Use big wire, and make secure connections.

The bible for lighning protection was written by Roger Block, "The Grounds for Lightning and EMP Protection" (1993). It is published by PolyPhaser Corp (702-782-2511) for $22.95. They take charge cards. I recommend this book to anyone who is serious about protecting themselves and their equipment from lightning damage.

I'll leave the value of this as an RF ground to someone else with more knowledge of that subject. My primary professional and personal interest has always been the safety and protection angle.

------------------------------------------------------------
FORSALE -- TINSLEY LABS CLASSICAL CASSEGRAIN TELESCOPE !!!
------------------------------------------------------------

I have for sale a Tinsley Labs 8-inch Classical Cassegrain
telescope, complete with the original German equitorial
mount and clock drive. Tinsley produced these fine scopes
in the mid 1960s and are known for their fine optical and
mechanical properties. They were (are) research quality
instruments which are quite rare and retain their value.

In mint shape, they go for around $3000. The one that
I have is in very good condition, but needs a few minor
items to bring it to "mint", as follows:

- mirrors are excellent, no scratches or chips, and
bright. Although very good and workable, a
recoating would make them mint.

- clock drive needs an external 12V battery pack and
rheostat to make it operational (this is as it was
intended). A nicad pack or motorcycle battery would
be appropriate.

- A low tripod or pedestal base (about 20" high) and
"rocker box" is needed for the equitorial mount to
sit on.

- the optical tube has some scratches in the paint and
a small dent, which absolutely does NOT interfere with
the optical path. Paint scheme is the original Tinsley
gray.

Thats about it. I just don't have the time to use this
scope and it's too valuable to just let it lay idle.

I'm asking $2150. for scope and mount (and absolutely will
NOT sell them separately).

The equipment is located in Monmouth County, NJ. For
further information, please contact me.

Thanks,

Joe Levantino

Really? I must have been mixing up information on the two radios.
It kind of made sense after I bought it because the pinout of the DIN
doesn't have anything like a serial pin labeled. Do you know which
pin(s) are used? The pinout info I have is:

1 - packet data input (microphone)
2 - microphone ground
3 - packet standby (PTT)
4 - 9600bps RX audio (500 mVp-p, 10 kOhm)
5 - 1200 bps RX audio (500 mVp-p, 10 kOhm)
6 - squelch control output (like COR/COS)
shell - earth ground

I had a TS-440S that had distorted (FMed) audio on all modes but wasen't easily detectable when running AM or FM for that matter. Anyway, the problem got worse as I went up the bands. The problem was a shorted band pass switching diode on the RF board.

Hope this helps...

PS

A service bulliten can be downloaded from Kenwoods ftp site. The bulliten you need is the PLL 1 bulliten...

: sfoley@cx30186-a.dt1.sdca.home.com

undoing the mod will do NOTHING to improve the intermod-all the mod allows
you to do is to tell the cpu to set the radio to the OOB freqs.
Without the mod, the circutry is still capaible of the wide-band rx, but
the cpu won't let you go there.
As the circutry is still wide-band, the intermod will be the same.
If you want to improve the problem, try a band-pass filter for the freq
range you want to rx.
Or, if the intermod is coming from a narrow range of freqs, then a
band-stop or a notch filter might be better.
An example of this might be:you are getting intermod from a paging
txmtr-you get a filter to notch out that freq-problem solved.

Sounds like a template problem. Make sure your yaesu.ini file in your windows directory is pointing to the correct template
file for that radio. If you use more than one radio, then you will have to have separate rdf's for each.

Hope this helps.

Jim,
It it quite possible that some of the ICs used in Tek scopes are
proprietary in that vintage. Their Integrated Circuits Operation (and
foundry) was quite mature at that time. The service documentation cross
references the part numbers to the manufacturer, so its very easy to
tell where they came from.

On the first question, if no one gets ya a copy - contact Kenwood, if they're anything like Icom, they'll have manuals they can sell ya. Maybe their web site?

As to the second - check out http://www.hamradio.com http://www.aesham.com and about any other radio retailer and ask for a 5/8's wave antenna for an HT. If I remember right, even Rat Shack can get them via RSU, albeit at a higher price. I've one here (Diamond RH778) that works very well on my Icom W2A. For my 2m only HT, the 'Smiley 5/8ths wave Slim Duck' from AES has worked nicely.

You are right, the only difference between the two is a battery pack. Low power version (2W) is using "BP-199", and high power version (4.5W) is being sold with "BP-200" / 9.6V.

1386. FS Antenna, Tower, accessories.....

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-14 00:00:00 UTC
From: Alfie <aradzik@injersey.com>
Message-ID: <34E623C3.73B5@injersey.com>
Source record: 153431

I just bought a house from a ham. He left a Rohn 80 foot tower(sectional)..I think he also left a Cushcraft RX7000 antenna on top. You can have the whole shebang for 50 bucks including the guy wire, coax and any other crap he left in the garage. I live in New Jersey. Come and get it!!!

Alfie

1387. WTB: Filters for Yaesu FT-102

Newsgroup: rec.radio.amateur.equipment

Hello and thank you for reading this post. I am in need of optional crystal filters for the Yaesu FT-102. Specifically I am looking for the following:
XF-8.2HSN 1.8 kHz SSB
XF-8.2 HC 600 Hz CW
XF-455C 500 Hz CW
XF-8.2GA 6 kHz AM
Thanks, Markus.

1388. FS: MOTOROLA UHF MT1000 99 CHANNEL

Newsgroup: rec.radio.amateur.equipment

>would mean "forecastle" or "foc'sle" as we say. If that's the case

The foc'sle is a storage or berthing area towards the bow of the
ship. It's the worst possible area to live, for the motion is
quite violent. Read Dana's "Two Years Before The Mast" to get
a better idea of shipboard living conditions (in that region
of the vessel).

>
>It's not in the manual. THe only mention i've seen has been for a
>hardware mod. If there is a way to do it, I would love to know how...

To extend the receiver and open up 800 MHz receive (cellular blocked):

-- Turn off the radio

-- Press and hold the band and squelch buttons.

-- Turn on the radio while holding these buttons,
wait for 5 seconds before you release the band
and squelch buttons.

-- Now the receiver should be opened up as far as it will go.

To enable Crossband Repeat:

-- Set the VHF and UHF frequencies you want to use.

-- "Lock" the radio by holding down the CALL/LOCK button
for two seconds.

-- Turn off the radio.

-- Hold down the SQUELCH button (above the PTT button),
the MAIN button and the BAND button.

-- Turn the radio on while holding these buttons. The "LOCK"
indicator (a key icon in the upper right side of the display)
will be flashing, and the radio will be in crossband repeat.

To disable Crossband Repeat:

-- Hold the CALL/LOCK botton down for two seconds. The "LOCK"
indicator will stop flashing, unless...

-- if the crossband repeater is in use, holding the LOCK button
won't turn it off. If you must shut it off in that condition,
press and hold the SQUELCH button, then hold the LOCK button

for two seconds, and the "LOCK" indicator will stop flashing.

Actually, the worst part of the ship to be berthed in is near the Chiefs
mess after "Chili" night... ;)

The back part of the ship is generally referred to as "aft" or "stern"...
old sailing ships used to have a "quarterdeck" which was generally an
elevated deck in the aft of the ship often where officers were berthed.

Dave,

Sorry I don't remember the switch to increase power that you mention. I have a file from one of the other rec.radio newsgroups that describes a Broadbanding Mod to the rig's Control Unit SWO3 (unmarked switch on the upper main board near the display board) which it says will give 100W between 1.5 and 30 Mhz.

Maybe more information could be obtained by using the Fox_Tango mailing list MajorDomo Information:<http://www.qth.net>. I haven't tried yet, but it's just a thought.

I share the same power output concern with my FT757GX. However, mine was just in the factory a short time ago (lightning damage) and it seems the power output is the same as before it was damaged.

My low output may be more related to my antenna configuration and resonance rather than the rig. My antenna is a 570 ft somewhat rectangular loop up about 20 ft that is fed with home-made ladder line. The rig's power out is about 50 (3.7Mhz) and 70 (7.1 Mhz).

When I first got the radio, I was at a different location and used an inverted V (abt 135 ft total length) up about 60 ft and fed with coax. I recall the output (3.7 Mhz) being closer to 100 watts then.

Message-ID: <6c4iqv$371$1@news.megsinet.net>
Source record: 153574

I have a Yaesu FT101zd for sale. I've had it about six weeks. It's extremely clean.
Apparently has very little use. Face looks new. No marks or wear whatsoever.
The case has a couple small mars. Works perfectly. Tunes full power.
All hf bands except WARC. Digital freq display.
I have the manual and original sales broshure.

I'm looking to get $375 shipped, or $350 pick-up in Chicago area.
I bought as a backup rig from a local ham. Then I fell into a Kenwood ts930s.
So no longer need it as a backup.

It can be checked out by any local here in near west suburban Chicago.
Trades for older 2m allmode gear (ts700a w/pl board or equiv.) welcome.

Thanks... Mike N9IVO 708-795-7739 home.

1428. Yeasu VX-1R software problem (ADMS-1D)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-14 00:00:00 UTC
From: Frank <fkandt@halcyon.com>
Message-ID: <34E5D3F8.1F803089@halcyon.com>
Source record: 153579

I have a Yeasu VX-1R and am using the ADMS-1D (ver.1.03) programming software.

The software seems properly installed. I can download from the radio to the PC to create an .rdf file. I can also
create a new .rdf file and save it. Then I can re-open and change these files on the PC. So far, so good.

When I upload an .rdf file to the radio, the upload works (the memories and associated parameters are OK in the radio).

However, after upload of an .rdf file to the radio, the next time I try to run and open that .rdf file on the PC, I get
the message "Radio data file image is corrupted".

I've reinstalled the software and created a new template a couple of times but the problem persists. Anyone have any
suggestions about this problem?

Any help or advice would be appreciated.....Frank Kandt N7DGO

I've done this mod on my W32 and it works great. However, when I
hook it up to a mag-mount gain antenna, I get a lot of intermod/noise.
I was thinking that the wideband mod makes the W32 more prone to
intermod. I've tried the partial reset for the radio, but it's still
wideband. Is there a way to disable the wideband mod short of a full
reset (will a full reset even work?)

On that wide a split, you will need to retune...MAYBE able to get it
to cover both freqs....but depends on the tuning range of the
radio....

I got a GE Delta to cover 48 and 52 MHz but the rcvr was now at .7uv
up from .2uv when tuned on one channel....

PS dont post non-for sale/swap msgs in the SWAP area please!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-15 00:00:00 UTC
From: jimmiew@sprynet.com
Message-ID: <34e77fbe.128602261@news.sprynet.com>
Source record: 153339

Thanks for everyone's help. The consensus is that these are CA3080's with maybe a selection critera for transconductance. We got lots of old data books at work and there is a good chance that I can scare-up a datasheet. If I cant find a replacement in a junk drawer at work, there are some vendors that we work with that specialize in hard to find components. Again, thanks for all the help.

Hello. I&#65533;m interested in getting a used base HF radio. Not looking to spend a lot, but I got some to spend. Please e-mail with model number and make, full list of features, any mods done, condition, and how much you want for it. Here&#65533;s mainly what I&#65533;m interested in in one:

```
-100 or more watts (200 PEP is a big plus)
-VFO tuning knob
-all mode (AM/FM/SSB/CW)
-160m-10m coverage (transmitting and receiving)
-volume, squelch, NB, etc.
-general coverage receive would be a plus, but not necessary
-built in CW keyer would be a plus, but not necessary
-manual, box, power cords, microphone, etc. are a plus
-built in meters are a big plus
```

Gary Pearce KN4AQ <kn4aq.xx.gary@mms.xx.net> wrote a lot about the
IC-32A?

Here in England we each have an Icom IC-W32E. (144-146) They replaced the
2 Kenwood TH-77. Please note that the twin mic/spkr connectors are not the
same.

Will the "A" mods work on the "E" versions?

There are 2 areas of curiosity:

Having read that the sunspot cycle is increasing, 6M is being touted
as the "new arena" to explore. I'd like some input from Ops that
actually use 6M & whether it'd be advisable to invest in such equipment?
Locally, there's only 4 Hams that use 6M (out of a 88 member club) &
they've advised me to seek info on a newsgroup.

Second, I remember reading about freqs below 160M a year or 2 ago in
QST. Is there much activity there and what's the usual cost of equipment
were I to explore that avenue?

Thanks for replies!

Hi Walt -- I was wondering the same thing. One of the Ham Magazines
answered the question by an article as to what to expect on 6M on and
off the solar cycle. Sounds exciting so I bought a TS-60S.

Maybe someone can quote the magazine article publication date.

Hello Jeff,

I'm perfectly aware of what the foc'sle is, having spent some time on
sailboats as well as 41/2 yrs in the U. S. Navy. I don't understand
what your point is. My discussion refers to the meaning of the german
prefic "back" in the context of Backstag, which I believe is the
german for "forestay". Perhaps my meaning wasn't clear.

Bob,
I run a Icom 706 in my 96 explorer sport. Works out ok, but I have a lot of what I believe is ignition noise. I also have this noise in the AM car radio. The dealer put a RFI capacitor on the electric fuel pump per a service bulletin. Did not make much difference. The explorer uses a distributorless ignition system with dual coils and I believe this is the source of the noise. When the engine is not running I get no noise.
I have a pretty good screwdriver antenna setup and all my grounds are ok.
I haven't pursued it much more because it does work,
but low signals get pretty much buried in the S7 noise level.
I may try shielding the spark plug wires and coils at some future date. Let me know if you find someway to improve the situation.

For Sale: Decibel Products DB304 $250 or B.O. plus shipping/packing.
BROAD BAND ANTENNA

4-stack collinear array of dual dipoles to prpovide broad bandwidth, high gain circular pattern. It mounts to the top or side of the tower.

6.7 dB GAIN, 150-174 MHz (Will also work on 2M amateur band)

�Broad Response - 10 MHz bandwidth �Moisture Resistant - VAPOR-BLOC� cable harness gives weather protection and iinsures inphase signal distribution to radiating elements.
�Circular Pattern - DB304 provides an omni pattern when two dual dipoles at the top are aligned at a 90 degree angle from the two dipoles at the bottom.
�
Each antenna is isolated from the other by 30 dB, and each has a separate feed line terminating at the base.
�Field Changeable - Patterns can be adjusted with ordinary hand tools.
�Lightning Resistant - The radiators operate at DC ground,
�Two-Piece Mast
Can be inspected and picked up Los Gatos, CA. Will ship, plus extra cost for packing & shipping.

GE used to build repeaters using this same radio platform. I've seen the books for them at many hamfests. If you can find one, then you should be able to duplicate their circuitry. If you don't come up with one, let me know. I may be able to locate one.

Good Luck.

It may be a more rugged radio if you get into the high dollar equipment but for my money, the true ham gear is the way to go. I've found my Kenwood, Icom, and Yaesu portables to be just as rugged as most of the marine stuff I've seen. Some of my gear even rivals my commercial band Motorola HT's in terms of toughness and reliability. And I've been a Motorola trained tech for 17 years.

As far as modifying the marine radio for ham use, it would require some signifigant hardware rework as well as the ability to reprogram the radio. Neither of these would be worth the fuss. Plus, once it was modified, the type acceptance would be voided and you could no longer use it on the marine band.

My suggestion would be to go get yourself a good 2 meter HT and enjoy. I recently purchased a Yaesu FT-50RD and have found this to be one tough little rig. By the way, Yaesu makes single band versions of the FT-10/40/50 in their commercial line, Vertex. So, I would say it must be a pretty tough little radio.

Good Luck.

I have a device called a Digital Frequency Display, which has no manufacturer ID on it anyplace. I picked it up at a yard sale and hoped to use it with my Kenwood TS-520 transceiver, but can't figure out how. The transceiver manual is no help.

It has three buttons on top marked "PWR", "MODE", & "Hzx100". It has a selecter knob on the left front with 3.5 through 29.1 bands marked on it, plus WWV. There are also led's to indicate upper and lower sideband. Near the knob is a square with a red "S" in it...I guess that is a logo for the manufacturer.

It has a LED type frequency display, and above that is an apparent model #: DD-1K. It has a heat-sinked power transistor on the rear, and the it has one phono jack for input or output.

Does anyone recognize this?

KenB

1465. Impedance Meter 252 [Electro Scientific Industries]

indeed they are 'fragile' - if this is the right word for it
we used 4x 8122 in 6 TX's for coast stations in this area. You must
check every valve for screen to controlgrid short circuit using a VOM,
up to 30% of the delivered goods showed this failure, and we could not
return them to the manufacturer! Similar experience applies for the
Danish manufacturer 'Sailor' which used 8122 in earlier shortwave
transmitter.

First time you test av valve be sure to run it with heater only for at
least one hour. But still some valves will have inter-electrode
short-circuit during first tests, so it is indeed a time-consuming
affair to find 4 valves to use in each transmitter.
It is important to use some grid bias circuit which will immediately
switch off the transmitter when screen-control grid shortcircuit occur,
or at least use some low resistance back-up negative grid voltage in
parallell with the variable, 18V transformer with 1N4007 diode, 1000uF
filter capacitor and a second 1N4007 gate diode (normally biassed off)
is a suggestion for secondary bias voltage to avoid screen voltage go

into the bias of the parallell valves (it is bad enough to ruin one valve!)

Steve,

Good antennas, perform better than most G5RV configurations. Also look at the "half-square" from Antennas West (website but I don;t kow the address) - I have not used one, but heard good comments.

Its been a long time, but if memory serves me correctly, 510 was a non-import model (i.e. not normally sold in US), but was manufactured with English manual and labels. Try Kenwood homepage and post a message to them.

I want to use a TM V7E for packet radio, but I don?t know wich pin of
the data connector switches the TX.
In the manual the pins are numbered as shown:
1- Data from TNC to radio
2- Ground
3- Standby
4- Data at 9600 from radio to TNC
5- Data at 1200 from radio to TNC
6- Squelch
Where do I connect the PTT line from de TNC?

I have a Midland 70-254B UHF HT, 16 channels, 5 watts, 440 to 470
coverage, PL encode/ecode, 13.2 volt 1000mah battery, manual and service
manual copy. No charger. I also have an Icom CM35 charger and Icom Super
BP-8 battery that works on this radio.

I am looking for a handheld PDA, like Apple Newton model 120/130, WinCE
1.0 or 2.0 models or ?

Or I would like to find a good table top SW receiver with digital
display and usb/lsb capabilities.

What do you have to trade?

Bradymarker XC Plus Printer

The BradyMarker XC Plus Printer brings a new dimension of capability to portable wire marking, electronic component labeling, and general identification labeling.

The printer's optical registration system automatically aligns labels for printing -- eliminating wasted labels, decreasing set-up time, and assuring you of legends that are always printed on the label.

The two-line LCD screen lets you see legends before they're printed and displays menus to guide you through the printer's advanced features.

A dot matrix printer, together with Brady's Series 2000 ink ribbon, generates clear, crisp, permanent legends. And you get three character sizes to choose from: normal 12 characters per inch, 8 characters per inch for text that's legible at a distance, and 16 characters per inch for maximum information on your labels.

The BradyMarker XC Plus Printer can be used with pre-printed labels. Brady offers a selection of stock pre-printed labels designed for use in a wide variety of applications. We can also print custom labels with your logo, company name, or any other constant information you need.

The compact BradyMarker XC Plus Printer is ideal for labeling and marking wherever the job is. With the capacity to print more than 500 labels or markers per battery charge, it's perfect for on-site cable or wire marking.

Specifications

1.8K of dual battery-backed (non-volatile) RAM (32K optional)

2.Weight: 4.5 lbs. (unit only)

3.Nine-pin dot matrix printer

4.Eight lines per inch printing

5..0959 high characters

6.Two-line liquid crystal display (LCD)
with 24 characters per line

7.Operating temperature range: 40&#65533;F
to 100&#65533;F

8.UL-listed AC adapter (120V, 60Hz
input/12 VAC, 2A output)

It's some sort of rf module made by motorola, about 1"x.5" and has 5 holes for some sort of pin like connectors. The numbers on the module are:

NDL6942A
M77D12 B
8529 A4 MAL

The connections are as follows:
Pin: 1 - input (???16 vrf???)
2 - 12 to 15 VDC
3 - choke to b+
4 - Gnd
5 - Rf out

Motorolas web site is of no help. Does anybody have any specs on this module??

Thanks for your time,

Don't forget that the purpose of the length of the ground rod is to
reach constantly moist earth. Also, have your power utility check the
effectiveness of the ground rod at your transformer.

Aha, no audio trick! Try wiggling the volume pot, if you don't hear any change your problem is probably open 4.7 ohm fuse-resistor on VCC line to audio amp. Amp is popular 5-pin 2002 on the left side of PC board, resistor in question is also at the very left edge closer to the back side (heatsink).

Well, I guess my main question is DOES a radio for this band OR ANY
of the HF bands exsist in HT form? I was just curious, and think that the
idea would be great, but I also think that the electronics required might
be too much for a small enough package. Please feel free to comment on this
and let me know. Thanks...

Yup. If you plug it in while it is on, the VOX won't work. Turn the unit off, plug in the unit, turn unit on. It should work.

I can't supply too many technical details but just some brief ones. I have seen a picture of one of these I was sent after a QSO. It is a hybrid solid state/tube rig. HF, 10-160metres, 100W+. It had a remote VFO. A little heavy but was a fairly reliable radio. It was the TS-520's predecessor.

Hope it helps :)

1503. Newbie: Icom-T8A, HP or not ?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-15 00:00:00 UTC
From: twod@not.valid
Message-ID: <6c62ri$324$1@vnetnews.value.net>
Source record: 153495

First up : I'm setting out studying for the Novice/Technician exam and
am considering buying the T8A - mainly on the advice of my brother who swears
by his IC-7A.

My budget - c/o IRS :) - will allow for a T8 and I like the construction and
size, I do a lot of travelling and a bit of hill walking so the water
resistance is useful, but am not sure whether to buy the current T8A model or
to wait a couple of months and get the HP (high power) model.

Am I correct in assuming that the only difference will be the battery pack
between the two models ?

I'd like to buy the current model in order to do some listening prior to
taking the exam, but if the HP model differs markedly maybe I am better off
waiting.

Any comments would be appreciated.

1504. Re: Help - Tek 2213 Scope Repair - Data on IC's?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-15 00:00:00 UTC
From: Mark McPherson <markm@teleport.com>
Message-ID: <34E695C8.3C231746@teleport.com>
Source record: 153496

Jim,

I can't tell you whether or not the 2213 used Tek-proprietary ICs in its front end, but I did work in Tek's Integrated Circuit Operation during that period. As I can best recall, all the parts we produced for Tek applications were labelled as "Tektronix" parts, with a Tek part number on the package plus the usual date code. It is pretty unlikely that an RCA- or Harris-labelled part in a 2213 would be Tek proprietary, especially if it's in the signal path, and I think it is even less likely to be proprietary if one brand has been replaced with the other.

Kind regards,
Mark

What are they labelled?

If the 2213 uses the same preamp board as the 2215 (and it probably
does - I think the only real difference is the dual sweep timebase
of the 2215), and if the ICs you are talking about are U120 and
U220 on the attenuator/sweep board, then they are CA3080s. These
are described as an "operational transconductance amplifier". If you
can't get the originals, the NTE cross reference lists a replacement.

Source record: 153509

Using amateur radio to get around the long distance tarrifs may be
illegal under certain circumstances (it depends on the tarrifs in
your state) FRS is NOT allowed phone patching at all nor can FRS use
rptrs...

Best bet would be get a cellular or PCS phone...sometimes they
have great deals which include a WIDE calling area...
or else check with the phone company on EAS or EMS..
(Extended Area or Extended Metro Service)....
but ham radio is for RADIO communications 1st....not to bypass
the phone company...

Chris

Hi Rich,

I've been looking for 8122 tubes for my old National rig.

Do you have some that you would sell or swap for 4CX250's?

I have some good articles from ARRL handbooks on high power VHF amps
using the 4CX250, but I've never seen any homebrew articles or
commercial companies other than National use the 8122 back in the 1970's.

A few posting on the ham newsgroups suggest that they are very fragile
mechanically as RCA built them less ruggedly than the Eimacs.

You're quite right ! The instructions does not say one important thing...
Before operating in the VOX mode plug the device (VOX Headset) to radio
and then switch your HT on.Trying to use VOX if you first switch the radio
and then plug VOX in will be no good.

> Can I use it as a x-band repeater? And how?
> What is the cw ID. for and how to use it?
> Will be grateful for any help.
FT-50R does not support crossband operating.It has built-in Dual Watch mode
only which is
rather less useful than crossband.
CW-ID is your ID (Ham call) which radio sends when you're using VPMS.
First you have to enter your call to radio's memory and then activate VPMS.
Have you tried with ARTS ?

It's very likely that the radios will serve your
purpose. Even if you're only planning on using one
channel, I suggest that you buy the
multiple-channel units, so that you can switch
to a clear channel when you receive interference
from other users or cordless phones (the 46/49
MHz types, not the 900 MHz types.) Kid's
walkie-talkies may work for you, but they have
two drawbacks when compared to the Maxon or
RS 49 Mhz radios. First, they usually use AM
instead of FM, so the voice clarity may not be
quite as good. Second, most toy walkie-talkies
don't have a "squelch" feature, so you would be
listening to constant noise while noone
transmitted.

Hope that this helps,

- MD

I recently acquired one of these mobile rigs, and now need to re-attach the microphone plug. I have tried to work it out, but the UP/DN buttons are not very clear to me.

I also would like to know how to operate this unit. When my father emmigrated he could not find the manual, and doubts he ever had one.

Can anyone help with a brief set of operating instructions and a mike pin function diag?

>The real problem arises when using a cross band repeater (lets say input
>146.490, output 443.000). My input (tx on the main, or left band) is
>repeated on 443.000, which is being received on my subband (right band),
>thus I get some nasty audio feedback. Kenwood's solution is to turn down the
>volume on the subband while xmiting, then turn it back up to receive. I
>think that's a low tech solution to a high tech problem! Any thoughts?

Unplugging the mic seems to work. If you've got the mic mod done, it
shouldn't happen anyway. I have one v7a with the mic mod and one
without.

Source record: 153522

Look at the MFJ verticals. They are half-wave and center fed. The
"ground-side" traps are at a right angle, but it doesn't seem to matter
much. The antenna has survived storms that other stuff didn't and I make
plenty of QSOs with it.

Used to have a Hustler 4BTV ground fed 1/4 wave. Unless you live on a flat
copper plate, don't bother.

1531. Mobile rigs in Ford SUV's, problems?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-15 00:00:00 UTC
From: bobw@col.hp.com
Message-ID: <6c76f1dkq1@nonews.col.hp.com>
Source record: 153523

I am interested in people's experience with RFI problems due
to amateur radio operation in a Ford Explorer, Expedition and
F150 trucks. More specifically, does the engine control and other
electronics radiate in the 2M, 6M, 70cm or HF ham bands?
Any experience, positive or negative of operating radios in
these vehicles would be helpful.

Anyone have any problems with this?

Thanks in advance,

Bob KB0CY

I have forsale a Mirage 440 MHz amp (1 watt in 15 Watts out).
Mirage asks $185 for these, and AES wants $169.

Here's some of the features
Special for ATV Service as well as SSB and FM
All Solid State - No Relays
No Remote Outlet
Excellent for H/T's
Specifications:
RF Power In
250 mW to 2 W
RF Power Out
2 W In 20 W Out
Current
3 Amps nominal
Size
7ï¿½" x 3ï¿½" x 2"
Weight
1.5 lbs.

Used for about a month on 9600 baud packet. Still in great shape.

Bruce

Hi all,

Does anyone know if the new Yaesu FT-847 HF+VHF+UHF rig includes transceive from 440 to 450MHz? So far I've only seen references that imply that the FT-847 can only cover up to 440MHz. This smells of the Kenwood TR-851 design which also covered 430-440 only.

Regards,
Luigi

OK.....listen to me!! I have 1 MFJ 989C tuner in great shape.$225 shipped and gauranteed. I have 1 Dentron MT 3000A (fixed inductance) in good shape, same $225. shipped and insured. I have 3 (three) MT 2000 A's (beside the 2 Im keeping) and they are really the best deal. They are un metered so put your favorite cross needle or double needle meter with them, you probably do anyway, they are the same as MT 3000 in handling power 2kw out easy!! Will take $175 and ship, they all look great in and out, and work very well. If your rig has swr meter, thats all you really have to have. I use the Autek WM 1 computing meter (129 new) with mine and it is the GREATEST. Faster and easier to tune than roller inductor, and more reliable!! Thanks, will trade for interesting stuff even way up if you want. Want Icom 756 or Yaesu FT 920. Murray Neece Odessa, TX

1547. Let's build some gear and some good will!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-16 00:00:00 UTC
From: Bob Bethman <rbethman@erols.com>
Message-ID: <34E8EC95.E95D8D17@erols.com>
Source record: 153239
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.equipment

I see a lot of discussions that I wouldn't put my name to. I fail to understand why they occur. Amateur Radio is a hobby folks. It also performs a public service in many instances and ways. I have participated in providing a communications link when a tornado dropped out of the clouds with no warning and destroyed a town. I've worked with parades and holiday celebrations put on by cities and counties.

I'm far from alone. Many clubs do this. Clubs provide equipment and operators for city emergency centers. Not uncommon at all.

I have 'Elmered' at least two hams that I know have gotten their tickets. I have helped folks when they have asked questions on 'How to...'.

I qualify in many eyes as an 'Old Fuddy Duddy'. That is because I have tendencies to be conventional or to some 'conservative'. I run older tube type equipment. I horse traded for a Collins Winged station; 32S3, 75S3, 312B-5, 516F-2. I also have an Heath SB-102, Kenwood TS-900, and a TS-820S.

I have built an amplifier with a pair of 813s. It met its demise when the movers packed [sic] it and shipped it to Asia. They shortened a Hallicrafter's SX-28A cabinet by about 1 1/2". I got lucky and received an insurance payment that allowed me to buy a Heath SB-201. (The 813s had a blower, a silver plated roller inductor with turns counter, and some serious air variable capacitors.

I've built my share of antennas, used frequency generators and oscilloscopes to repair rigs.

I am absolutely not an engineer. I simply found a hobby that I enjoy. My wife has told her friends, "I know where he is and what he is doing."

I'm starting another amplifier project or two. I find it very satisfying to run one I have built. It is just as satisfying running one built by kit. I rarely run one, but when I just can't get through with normal power levels I want to be able to turn it on and communicate.

I have a keyer, don't like it. I prefer my straight brass one from Nye Viking. I manage to get up to 35 WPM with it. I'll drop down an run with the new guys on the Novice segments in a heart beat. That's how they will get beyond novice, practice, practice, and practice.

I really don't care if code stays or goes, but I also see nothing wrong with it. I didn't see anything wrong with ground school before starting to learn to fly either.

I started with used rigs because I was Military enlisted and certainly make enough to buy new. I have watched as many others have struggled with solid state rigs and their SWR foldback circuits. I have since stuck with at least tube type finals and tunable PI output circuits.

Folks, let's get with the program. Enough trashing others. Those that incite hate, discontent, and are out to simply stir the pot for their entertainment aren't worth the time to bang out a response on the keyboard. Let's get back on the air and enjoy the hobby. Let's have some good sensible discussions on the NGs.

I enjoy reading the long technical threads. We might want to think about using them as an answer to some poor guy who only asked a simple question as how to make a quad, yagi, or wire a microphone. He really is only trying to get something done. Let's help him. Then we can start a new run and beat our heads into the ground with the very in-depth threads. I may not be an engineer but I sure am not stupid either. I may want to start some of you off and running on aspects of my new Amp project.

Let's see, should it be a pair of 3-400s or a single 4-1000. Should I build it with a band switch or should I use a roller inductor. Input tuned for each band? A T-Pad so I don't over drive? How about a Variac to change the plate voltage to allow for different output levels?

Okay, said my piece. Now to go scrounge through all the parts boxes. Got to find some of those HV fixed caps, feedthroughs, meters, and what have you.....

I have a very nice Yaesu FT 767GX with 6 and 2 meter modules. Its clean and working fine!! Just ready for sumthin else, its MINE> Want a 756 or an FT 1000 or a 950, or MONEY! All the ones Ive seen in past few months (not many) have been 1500 bux. This one is just $1200, for quick sale. I wont take the modules out, unless of course you want to buy the radio for $995 and leave me the modules. It would be well worth it , its a great HF rig. But with 2 and 6 all it becomes quite a bargain. Low time on this unit as I mainly use it for a 2 meter rig. And I dont much like 2 meters. Anyway, email me with your shipping instructions and send me a money order, you know you want it!! Thanks and 73 for now. Murray

Whoa. What evidence suggests that you have not one but TWO bad preamp
chips?!??

Have you checked the rest of the vertical amplifier signal chain to make
sure? It is hard to see how two completely independent input chips
could be blown, barring exceptionally-destructive stupidity on the part
of the previous owner. :(

Find someone with the software or purchase the software...then you can turn the extended receive on or off at will. The intermod will always be there, though....the nature of the beast with handhelds, especially attached to any kind of an antenna with any gain. I've got the W32A and really love the radio, but the intermod makes it virtually unuseable on some frequencies in certain locations....to compensate, I've learned where I can't use it.

Hope this helps.

Hi Louis and Bob, maybe r.r.a.policy is just not your cup of tea. The r.r.a.policy newsgroup was created to take the code testing debate off of r.r.a.misc If you don't like never ending debates, then you probably won't like r.r.a.policy but some people are addicted to it.

Hi!

The new Web address for Llaves Telegraficas Artesanas (Craftsman's Morse Keys) is: http://www.arrakis.es/~llatelar/

If you love CW take a look at http://www.arrakis.es/~llatelar/ this is the web site of Llaves Telegraficas Artesanas (Craftsman's Morse Keys) a spanish manufacturer of hand made keys.

I am not involved in that business, I only love and enjoy CW and its equipment.

Hi Steve,

I'll just be you didn't get the correct headset for your XCVR. The FT-50 does not have built in VOX therefore it must be a function of the mic/headset. Check and see if yours has circuitry inline to the headset.

Next, my experience with the FT-50 MIC/AUDIO jack is it is really picky. I have the one plug to two jack adapter. When I was checking out several mic's to see if they would work.....very few regular mic's did because of special tricks they to with those lines. I ended up buying an aftermarket speaker mic made for the radio.

Hope this is of help.

Also, there is a very valid reason for wanting the older versions of ADMS software. The 1.00, 1.01 and 1.02 versions allowed some software modifications such that extra receive capabilities which were possible with the VX-1. The latest version of software, 1.03, does NOT allow this --- so it is quite reasonable to want to trade "down" to an earlier version.

In fact, as a registered owner of the ADMS 1D software, ver. 1.03, if someone out there would be so kind to share an earlier version, say 1.02 or 1.01 with me I would be most grateful.

1569. Need EDACS MDX help

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-16 00:00:00 UTC
From: baxter@kuhub.cc.ukans.edu
Message-ID: <1998Feb16.101808@kuhub.cc.ukans.edu>
Source record: 153294

Is anyone familar with the Ericsson MDX radio??? In receive only use, we're trying to program in an EDACS system, and the radio only will hold 16 talk groups. However, another identical radio seems to hold 128 talk groups.

It is our guess that the features of the radio, like how many groups it will hold, are settable by the features string in the radio.

Does anyone know how???

Thanks.

There's some truth to that for AC and DC safety, but the main reason is to engage as large a volume of soil as possible. Earth is a sheet resistance, and the more contact you have, the lower the net resistance will be. Deep grounds have virtually no value at RF. Skin effect keeps RF currents near the surface. Shallowly buried radials are more effective than deeply driven rods for RF grounding (and for lightning mitigation, that's a surface charge effect too).

It is worth noting that the NEC *preferred* ground is the Ufer ground. Underground water piping is second choice, and a made electrode (ground rod) is the choice of last resort if you can't obtain a better Earth termination.

1571. Al. flashing as ground strap? another IRF and lightning question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-16 00:00:00 UTC
From: "Lab Assistant"
Message-ID: <34E8778D.513C@prism1.gatech1.edu1>
Source record: 153296
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I have been looking for copper flashing or grounding strap and it is
expensive and rather hard to find, but Aluminium flashing that is
used for roofing is quite common and affordable. Is this an acceptable
alternative? I want to install a correct lighting and RF ground and
was thinking about using 12in. or 6in. wide Al flashing as the ground
strap to a 3/4 in. copper pipe (as gound bus in the shack) and entrance
box (for antenna lightning arrestors), then connecting this
to a star ground system which is also tied into the phone, power and
tower grounds. Is this a good setup? I would like to do it right the
first time.
How do you attach a wide strap to a gound rod anyway??
thanks,
KS4TY, Eddie

Ken,

I never heard of a DD-1K, but I know of a couple devices called
DD-1. One was (is?) made by Oak Hills Electronics, and another
DD-1 was made by a company called Spectronics. With the "S" logo,
that might be related to the one you have. The ARRL web site lists
a product reviews for that unit in July 74 QST.

Both the items above were digital displays, thus the "DD" in the
model name.

Hi, have for sale a Kenwood TS-700A, 2 meter multimode with usb/lsb/cw/am and fm. This is an older model 2 meter radio with analog display. Radio has built in ac power supply and puts out 10 watts. Great for getting started on 2 meters for satellite or weak signal work. Radio was recently aligned by Kenwood factory rep. Includes microphone and manual - condition is very good-excelent. Price is $275. Thanks in advance.

Mike

>your missing the point

Despite the sarcasm, this forum is designed as a legitimate swap medium; not a black market for thieves. While undoubtedly some stolen material gets transferred here once in a while, I've yet to see a message like:

" FS: Hot TX-xxx for sale cheap. Found it sitting in a car and
not being
used at the time. Great deal to first reasonable offer..."
or;

"WTB: Got an extra FG-xxxx that you walked out of the store
with didn't get caught? Email me for a quick turnaround..."

If you pirate software you steal it. Plain and simple. No equivocation. If people really want to steal software, at least have the courtesy to guise in some sort of code so that you don't get caught easily and/or offend straight readers.

New baby forced relocation of my shack to different room, need money or smaller bookends!

Swan 500, cosmetically looks great, with manual (copy). With 117CX power supply (also looks great). Has a bad connection in the jones plug in the back of the pwr supply, you have to wiggle it a little to get the speaker to work.

Heathkit HW18 100 watt 3 band cw rig (80, 40, 15 meters), with manual (original) has non-heathkit tuning knob, tuning window is a bit yellowed so this is not a showpiece. Needs final tube (6GE5).Construction workmanship is good quality. I have not used this rig but has great potential for a CW boatanchor first rig.

I can e-mail images of these radios to anyone interested in them, including underside/construction detail pix of the heathkit. If you reply be aware of the change in my e-mail header which those of us who can't eat spam resort to.

Pricing: I will sell both radios for $210 and split the shipping with the buyer. I believe this to be a very fair price but if you don't and are interested in them convince me in some rational way, I'll listen- I can put a monetary value on the high SWR generated by my wife! I would also be interested in swapping for some VHF gear, namely a 2 meter amp, 2 meter transverter, or vhf all-mode rig- As long as they are smaller than what I have! Thanks for wading this far!

1590. Christie Aponte, WP4MTI Fundraising Update: THANKS!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-16 00:00:00 UTC
From: spambuster@greeneggs.com
Message-ID: <6ca4bt$o10@elf.wang.com>
Source record: 153315

Good Day!

I wanted to send out this update to make everyone aware of the results of the Christie Aponte Fund Drive.

As most of you know, Christie is an 11 y/o ham from Puerto Rico who has familial ties to the Boston area. This past Christmas, the Boston-area ham population set out to raise funds to replace Christie's two meter radio that was stolen while she was undergoing surgery at Children's Hospital. Christie was seriously injured in an auto accident four years ago, and has undergone 11 separate surgical procedures to correct the damage caused by a drunk / drug affected driver.

To date, we have raised over $1000 in cash contributions. Needless to say, we are all amazed. We can't thank the ham radio community enough for the incredibly generous contributions to our informal fundraising activities. We honestly expected to have difficulty raising $250 for a small 2 meter radio. Instead, hams responded over a short, two week period with a substantial outpouring of support for this family.

The night of the joint, January meeting with BARC and WARC members, we had collected around $800 of the final amount, and presented these funds to the family. In addition, hams donated a Drake HF rig, coax, two antennas, an Alinco 2M FM radio, a 35 amp Power Supply and an SWR meter. Finally, hams donated an ARRL membership, an YLRL membership, a Waltham Club life membership (BARC had already made Christie a member of their organization), and enough money to pay for ARRL insurance for her station. The remainder of the funds that continue to trickle in will be presented to Christie when she returns for a spring tune up this March.

Thanks to the incredible generosity of the Hotel Sontesta - Cambridge, the club had use of a great conference room, and overnight accommodations for Christie and her family. All of these benefits were provided at no cost to the ham community or to the Aponte family. The hotel staff performed above and beyond the call of duty, and guaranteed the success of our project. Scott, WB1F, dressed up as Santa Claus, and presented the gifts to Christie, who in spite of acute post-operative pain thanked each and every person who attended her presentation. She even made a short speech to the assembled throng. She is one fantastic ham!

(If you ever need accommodations in the Boston area, please consider the Hotel Sonesta. They are a fantastic group of people!)

At present, we are trying to work with her family to set up a scholarship fund to help pay for Christie's college education. Christie

is exceedingly bright, and more dedicated to her schoolwork than anyone I know. She even demanded that her parents return her to Puerto Rico just days after surgery so that she wouldn't miss a day of school.

Christie's medical bills are substantial, and will put significant pressure on the family's ability to save for a college fund. As a result, we are exploring ways that we can help out with this issue.

We'll keep everyone posted regarding Christie's recuperation, and feel free to email if you have questions.

1595. CW Morse Decoder MRP373 now available.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-16 00:00:00 UTC
From: Norbert Pieper <POLAR.Electric@cww.de>
Message-ID: <34E8A8DB.30FF@cww.de>
Source record: 153320
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.equipment

Latest version of Morse Decoder MRP37[3] is officially released !

MRP37 is a software-based Morse decoder developed as an MS-DOS
application by Polar Electric Engineering. It uses the audio output of
your radio receiver connected to your computer's sound card to decode
the CW audio signal to ASCII text.
A comfortabe CW-send function is included!
Now you can have a QSO at CW speeds of 20 wpm or more and make even more
contacts during CW contests! And by careful listening, we think you'll
notice an improvement in your own code copying ability.

For more info and instant download and test of MRP37[3] go to
http://members.tripod.com/~PEeng/morse

For additional information send mailto: POLAR.Electric@cww.de

: The next town is only 5 miles away. To get local calls, I have to move
: there, and I have not the funds, not now until I graduate and get a job.
: I read in Popular Communications that under right conditions, the Kenwood
: FRS can broadcast to 50 miles. Can I use this in so. CA? Thanks!

The Kenwood FRS is *not* a ham radio. The absolute best range for FRS radios that I've heard about is about half what you read, and *only* because it was mountain top to mountain top ("normal" range is 2 miles or less) There is _no_ provision for repeaters on FRS either.

Most repeaters that have phone patches usually require you to be a dues paying member. MOST of those don't have the capability to recieve incoming calls (IMHO something that is against the rules anyway) And further, no "business" calls are allowed over ham radio. And it would be a highly unususal for a club to tolerate someone using it's phone patch for his only telephone access.

rec.radio.amateur.equipment

I've looked recently after someone had a problem with Ford fuel
injection,
noisy fuel pumps, for the part number.

Ford Part # is F1PZ18B925A Filter-Radio Rec (cost in 1996 was 45.09)

This must be mounted close to the fuel pump in the tank. I chose to use
the
approved Ford part since it was going in the fuel tank, at least they
would
never be able to say I used the wrong part if the Bronco blows up, HI !

So there it is for future reference and it does work.

I have a sick IC27A 2meter FM mobile rig. I am looking for a copy of the schematic. I believe the problem is in the audio section. If anyone has one that they could copy or scan and send to me. I would appreciate it very much.

If anyone has one and has had audio problems, Please let me know what you found wrong. The rig appears to be working with the exception of the audio section.

Thanks in advance for your help.

1614. What's the best PC wide band radio?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-16 00:00:00 UTC
From: MelissaQ@famnix.com
Message-ID: <6c81ql$g3k_002@dialup1.den.amnix.com>
Source record: 153344
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I received a brochure in the mail a few months ago for a WinRadio
that plugs into a PC and uses Windows. It looks very cool except
that when I visited their web site, the sensitivity specs don't seem
to match the better ones in the brochure.

What's the best thing like this out there?

It would be really cool to have a super sensitive and selective wide
band radio receiver like that for the PC and Windows (still using
3.11). But $500 seems pretty steep for it too, being there's no
case, dial, massive hardware, or any of that involved.

Is that the best thing like it on the market now?

Please email me on this too, as I may not get back here in time & my
ISP erases posts every day.

If the digital display goes crazy, reseat the connector for it.
Otherwise a great rig, very good in high sig strength areas, perhaps
due to single conversion design.
Real pretty as well!

1625. Fuel Pump EMI - Ford Products

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-16 00:00:00 UTC
From: Joe Orrico WB6HRO <eugene@loop.com>
Message-ID: <01bd3a8f$26a2f4f0$aa3dd3cf@joe>
Source record: 153355

I've looked recently after someone had a problem with Ford fuel injection, noisy fuel pumps, for the part number.

Ford Part # is F1PZ18B925A Filter-Radio Rec (cost in 1996 was 45.09)

This must be mounted close to the fuel pump in the tank. I chose to use the approved Ford part since it was going in the fuel tank, at least they would never be able to say I used the wrong part if the Bronco blows up, HI !

So there it is for future reference and it does work.

de Joe Orrico WB6HRO

Source record: 153362

Compared to Icom and Yaesu, it is an intermod sponge. It was totally unusable even near a city because all I heard were pagers and dispatchers. Yaesu is easily the best here.
Four, yes 4 channel per second scan rate. This is 50's technology. It makes a career out of scanning the memory banks. Compare this to Icoms 8 per sec which is still slow and Yaesu's 26 channels per sec in their FT 8000 and 8100. Unfortunately the 8100 has some other strange quirks.
The blue on white or white on blue is very difficult to see when used mobile. The worst color scheme of all, even with the revised and new version. Worse when viewed at an angle.
I consider this unit completely unacceptable and unuseable.

Hi all,
I have an IC900 with the 2 meter hi power, the 220, and the 440 modules for sale. It has the remote mounting with the optical cable and everything so you can stack up to 6 modules in your trunk and mount the display on you sun visor. It also has the optional tone unit and the manual. I'll throw in a speaker. It works fine. The buttons on the console look a little used but everything else looks new. I would like to have $690 plus shipping. Or make me an offer.

Thanks for your interest,
Jim McGhee N5FZT

Robert,
the word back for the forcastle is also known in germany. BTW the backstag
is not the forestay (Vorstag in german). If a boat has backstags it has two
of them. They go from the mast backwards to either side of the boat, while
only on one side, the leffward, is tight.
I hope this description helps to locate that stay.

Andre

Dear Prospective Customers,

We are a newly formed company dealing with radio communications equipment for both commercial and amateur based in Kuala Lumpur, Malaysia. We are offering these equipments for sale at a very special discounted price due stock clearance. We are able to sell at a very competitive price due to purchasing them in large lots from Japan and due to cost of the products quoted in the local currency before.

All products are brand new and fully guaranteed. Eg. HF transceiver from ICOM (IC-706 MkII) is being offered at US$1120.00 (excluding freight) against the current price of US$1289.00 offered by other radio dealers in the US. Please allow 1 week delivery after clearance of checks. We accept checks in US funds only.

For quotes of all other products available and further queries, please e-mail to hamsupplies@trust-me.com or phone ++ 603 9439284 fax: ++ 603 2513775 attn: Farez . We will promptly entertain any of your queries.

Sincerely,

Megat Farez (Managing Director)
HamSupplies International

I've just learned, that in a dictionary for sailors these two stay are called this:

Achterstag=(standing) backstay
Backstag = running backstay

There's no such thing as a "regular mike connection".
There are 4,5,6,7, & 8 pin mic connectors for a start.
Also an 8 pin mike socket from (for example) Kenwood will use
different pin connections to an 8-pin from Yaesu -different again
for Icom.
You need to specify the intended purpose -which rig ?? (make & model)
& then someone can look it up in the handbook for their rig (if they
happen to possess that particular rig).

1653. ** Yaesu VX-1R CELLULAR MOD/OPEN transmit

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-16 00:00:00 UTC
From: petervee@hotmail.COM
Message-ID: <19980216143322.29547.qmail@hotmail.com>
Source record: 153383

I bought a Yaesu VX-1R and somehow have managed to open it for both cellular receive and open transmit.

It receives up to 999MHz and transmits 420MHz to 470MHz as well as 136MHz to 170MHz.

No hardware change was ever done. The jumpers are as when shipped. However, there must be some combination of frequency that sets it on. I dont want to experiment with it, because the general receive may turn off.

I seem to remember however that the 747 turns general TX on or off when the frequency 12.3456 is on the display and then turning the radio off and then on. Maybe this is similar.

It is a great radio and I plan to get a second one for my daughter.

Best,
Peter, KC1QF

Hi,

I will be travelling to Ft. Collins, CO, next week and would like to know
if there's a HAM radio store in this area.

I'm looking for the ADMS-1D software to program the Yaesu radios. The
software is not yet availabe in Germany (at least my dealer is telling
me this). Programming the VX-1R by hand is a real pain.

Thanks for any hints,

Ulli (DL1SBL)

> But do you happen to have the cellular mods for this rig?

Monitoring the cellular band is ILLEGAL. As a law abiding amateur radio operator, you should heed this warning. Use the radio for its intended purpose (talking with other hams) instead of trying to eavesdrop on private conversations.

Here's what i got:

I got this off this newsgroup awhile after the radio was introduced.
It worked for me.
All caveats apply!

Remove both top and bottom covers.
Unplug the speaker and set the covers aside.
Lift up on the 6 tabs on the top and bottom of the front of the radio
and remove it.
We should now be looking at the back of the faceplate receptical.
Position it so that the voice modual is at the top while looking down
on it.
Below and to the left of the modual is a V shaped copper spring.
The resistor we want to remove is in the 0 (zero) position
Remove nothing else.
Do a full reset per the instruction manual
You should now have 300 to 470mhz receive on UHF
410 to 470 mhz transmit.
118 to 174 mhz receive
and 136 to 174 mhz transmit.

I have heard that 800 mhz reception is possible, but I haven't been
able to find much on it except a posting on packet from a guy in
Belgium. His description of the mod sounded cryptic at best so I left
it alone.

Randy

Randy
Greater Cincinnati Northern Kentucky Scanner Page
http://home.fuse.net/rwtrue00

Remove the detatchable face and the bottom cover. Look at the pcb
that
is vertical behind the the front of the radio. There will be 5-6 sets

of solder pads numbered 0-whatever. There will be 2 chip resistors on the first two pads, the rest are empty. Remove the resistor on the first pad (the one closest to the grounding spring-should be #0). The new range should be VHF 136-173.995TX 118-174RX UHF 410-469.995TX 300-470 RX.

This is directly from the Kenwood Supplementary Info sheet TM-V7A Beyond MARS Modification.

Aye, there's the rub. Even if this is a legitimate business, which it may be
(though anyone with a domain name of "trust-me" is suspect in my book),
there is the little matter that this will be a grey market radio with no US
warranty, and the shipping and duties will eat up any savings.

>KS4TY, Eddie

Eddie, the problem with aluminum flashing is achieving a
good permanent electrical bond between it and the copper.
You'd need specially fabricated clamps and plenty of
NoAloX to keep an insulating aluminum oxide layer from
forming in the joint. You can do it, but it is probably more
trouble than just forking over the money for copper flashing.

Fore sale...

Manufacturer
BK Precision

Model
830 Autorange Capacitance Meter

Price: $100.00

Description
4x6x1, accepts standard banana connector leads, have slotted contact for those tiny tine ceramic disc caps. Runs off batteries or wall adapter.

Auto range with LED range indicator, LCD display, have fold out legs for bench use.

History
Bought new back in 1989 when I was into high end car audio. Used for approximately 1 year tuning filters (part time on weekends, less than 30 hours total).
Cardboard box is wasted, and can't find meter leads (probably with my VOM), and the wall power adapter has been long gone(probably used for some other gadget).

If interested, please email me at the following

NOTE I hate spammers, so if replying, please remove the c from my name in the reply address.

I have a Heath IT-17 tube tester. It covers a whole lot of tubes, but doesn't list 6LQ6 and other similar sweep tubes, anyone have the settings for these? Anyone have a collection of settings for other tubes that work with this tester, please?

1685. IC-756 spectrum analyzer display

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-17 00:00:00 UTC
From: NE7X <NE7X@amsat.org>
Message-ID: <34EA084B.7DFD@amsat.org>
Source record: 153165

After I purchased my Icom IC-756, I noticed the vertical amplitude on the spectrum analyzer display is quite low on the higher band (ie: 18 MHz and above), unless the receiving signal is +20db over S-9.

I called Icom support on the telephone and they informed me that the spectrum analyzer display amplitude is derived from the front RF section of the receiver. The signal level to the spectrum analyzer is a fixed value. What I have notices is the vertical amplitude of the spectrum analyzer display can be increased on the higher bands if the RF pre-amp #2 is selected. However the vertical gain is still somewhat low.

Does anyone know what component (resistor/op-amp) to change to allow more signal into the spectrum analyzer so the vertical amplitude can be increased?

NE7X...

I suggest you take a look at the ARRl WEB page:

http://www.arrl.org/

http://www.arrl.org/field/club/clubsearch.phtml

They are a very good source for both books and club information.

If you can join a local club, I'm sure that there are there are members in
every Ham Radio Club that might have some ideas / tips / suggestions.
Just remember, there's no one single "ideal" radio for everyone. The
name brand products are all very good. If you want to see what others
have posted in the past, just check out:

http://www.dejanews.com/

I've found it to be a very helpful source for user comments.

73,
Bob KF6JHG

>> little radio. IF this has been discussed here before, please point me
>> to a faq file or web based review. I am thinking about purchasing one,
>> and would value your experiences to help me make a wise choice

I have a VX1 and an FT51.

Good points:

Very small but full featured handset.

Long battery life and built-in rapid charger.

Loud audio plus good quality wide band FM.

The battery (approx AA size) fits inside the handset and takes up half
the internal volume. So Yaesu have managed to build a dual-bander into
the other half which is the volume of a single AA cell!

Bad points:

The firmware in the VX1 is poorly written. As a consequence, it can
sometimes be a pain to use. For instance, to move between memory
channels you need to use the UP/DOWN buttons rather than the tuning
knob. Also, the entire receiver coverage is split into 8 bands so it is
difficult to easily switch between 2m/70cms bands (eg. if you want to
keep an eye on the local 2m repeater and also the local 70cms repeater).
Also the switching between GRP-1 and GRP-2 memory banks is a pain.

The low power can be a serious limitation is your favorate repeaters are
not local.

HUGE battery charger!

Non-standard 4-pole 3.5mm jack for speaker mike and data.

Conclusion:

Nice toy but the firmware is beginning to irritate me...I am finding
myself using the FT51 more as time passes as the FT51 is such a joy to
use. I'm waiting for Yaesu to bring out the successor to the FT51 -
will it be triple-band?

1715. Heath HW-16: AGC where AGC has never gone before

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-17 00:00:00 UTC
From: wb4lnm@aol.com
Message-ID: <19980217005900.TAA07134@ladder03.news.aol.com>
Source record: 153256

Thirty years ago, as a novice, I built an HW-16. It worked great, and I loved using it.

Three weeks ago, I purchased a nice, used HW-16 in great condition (I am revamping it for my 7 year old son who is in a novice / tech plus class). Thirty years of experience and an EE degree now makes me realize that the HW-16 never had AGC! I guess what you never experience, you never realize what you are missing. Now I know why the radio always sounded so "transparent".

I'm looking at adding AGC to the receiver so that my son won't hurt his hearing as I probably did listening to static crashes on 80 meters many years ago. Although it is probably closing the barn door after the cows are out, I'm looking at audio-derived AGC as a simple possibility, thinking that with CW this is probably an effective solution. This was the approach used by several Heath radios including the HW-12/22/32/18 series and others.

I'm wondering if I am reinventing the wheel here. Sure, I could add another parallel IF stage with an MC1350 IF amp and IF rectifier, but I'm looking for something fairly simple. It looks like the RF gain pot varies the bias to the RF and IF amp tube cathodes from about 0.2V to 3V for cutoff. I'm thinking that I can rectify some of the AF and use it to control the gain at that same point. Has anyone tried this or other solutions for AGC on the HW-16 and what has been your experience?

Please reply directly to WB4LNM@aol.com or to the list. Thanks.

John...

Source record: 153258

We have written a Toroid software package for use DC to 300 Mhz. Many Years of research has gone into error corrections for the low perm cores , 200 & 360 degree coverage as well as SRF for series and shunt coils. Much of this has come about as a request from Micrometals. The pin point accuracy allows us to add a custom core feature for custom shaped cores, stacking cores side by side and machining cusom phenolic cores from plastic, teflon, wood, ect...
Download a demo or just view the software main screen at our web

1719. Re: TM-V7A PRO's & CONS

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-17 00:00:00 UTC
From: dddavis@atl.mindspring.com
Message-ID: <6car3i$kd9@camel21.mindspring.com>
Source record: 153260

I'm really disappointed to hear the bad experience. I have not owned any Kenwood radios before, so I have no direct experience to share. However, I was recently thinking that some of the features which the TM-V7A has are nearly extinct on other radios. For instance, it still has the remote control via DTMF capability like my ICOM 2700. It also has the option of a voice module. I believe that Icom has eliminated the voice option on their newer version, the 2710. It is a useful feature for me, and I was glad that Kenwood was keeping it alive.

Another feature I like is the ability to tag frequencies with alpha labels instead of channel numbers, but to display the frequency at the same time. The only thing missing is the software, which I take it got hung up as the developers of EZ Clone went out of business.

regards, Don (KE4KYO)

1721. FT-50R current draw when off -- SUMMARY

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-17 00:00:00 UTC
From: efricha@alumni.cs.colorado.edu
Message-ID: <34e8ead1.9897692@news>
Source record: 153262

Thanks to all who responded to my question Re: FT-50 power usage.

The responses I got indicated that the FT-50 would, under certain circumstances, use about 6mA when off. Cycling power on it -- turning it on and off again -- would often drop the current draw to the specificied 250uA. For my own FT-50 I was unable to cause it to draw 6 mA but was able to drop my measured 350uA to 250uA by cycling power.

For those who do see the 6mA current draw, Yaesu has a fix for it.

My own difficulties appear to be caused by battery pack problems. Deep-cycling the packs seems to be helping them.

Thanks again to all of those who responded!

I need some clarafication on something i was told in line with a power output problem IVE been having.
first ....i have a dualbander that on UHF puts out more power on the lower edge of the band than the top.

now another ham told me after getting the repair manual from yaseu that i should check the vco voltage and compare it with the specs in the manual.

well, the voltage is a little low, but the radio is on freq across the band.

so, my question- is the other ham right in saying that the vco voltage is causing the low power output. and if this is true do i need to realign the radio according to the procedure in the repair manual

1724. TMV-7A Mod Question???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-17 00:00:00 UTC
From: Swtempo@worldnet.att.net
Message-ID: <6cb3nj$kib@bgtnsc02.worldnet.att.net>
Source record: 153265

The mod I have for the Kenwood TMV-7A says to do the following

Remove both top and bottom covers.
Unplug the speaker and set the covers aside.
Lift up on the 6 tabs on the top and bottom of the front of the radio
and remove it.
We should now be looking at the back of the faceplate receptacle.
Position it so that the voice module is at the top while looking down
on it.
Below and to the left of the module is a V shaped copper spring.
The resistor we want to remove is in the 0 (zero) position
Remove nothing else.
Do a full reset per the instruction manual
You should now have 300 to 470mhz receive on UHF
410 to 470 mhz transmit.
118 to 174 mhz receive
and 136 to 174 mhz transmit.

I've had that done by a tech and I do believe it worked when checked.
Know that I've got the radio home and I've spent some time learning
the many different features of this radio, it no longer transmits
where the mod says it will. Like I said,I do believe it did when
tested at the techs.
I can't find anything that I've locked out via the different key
functions and the like. And IT DOES transmit in the normal 2m and 70
cm ranges.
Does anyone have any ideas on what I may be doing wrong.
Thanks

swtempo@worldnet.att.net

1725. NEED info on Kantronics Mini-Reader for CW/RTTY.

Newsgroup: rec.radio.amateur.equipment

Looking for any info on Kantronics Mini-Reader for
CW/RTTY including hints on use or a owners manual.

This is a model similar to the MFJ-462B that decodes
CW/RTTY on it's own LCD or LED display when connected
to your shortwave radio's earphone jack.

What other models are similar to the Kantronics
besides the MFJ unit with a built-in display?

1726. FS: TI 320C5x DSKs (DSP Starter Kits)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-17 00:00:00 UTC
From: Randy Cole <cole@netcom.com>
Message-ID: <34E93292.A48@netcom.com>
Source record: 153267

Some time ago I purchased a bunch of new, unopened TI 320C5x DSP Starter Kits (DSKs) that were sold as surplus by TI. The TI part number is TMDS3200051. I have five DSKs left, and I will sell these last ones for $50 each, including USPS Priority Mail shipping within the U.S.

These kits are designed for students, experimenters, and developers who need a simple, low-cost way to prototype DSP-based applications for the TI 320C5x series of DSP chips. The kit includes a small (2.5" x 4") PC board with a TMS320C50 processor, a TI Analog Interface Circuit (AIC) chip with 14-bit A/D and D/A capable of sample rates to 19.2 K samples/sec, RCA jacks for analog I/O, and a 9-pin RS-232 host interface. The kit also includes a simple assembler, loader and debugger for the PC, a kit manual and a TMS320C5x manual.

The latest versions of the software as well as several user-written demo programs can be downloaded from TI. The URL is:

ftp://ftp.ti.com/mirrors/tms320bbs/c5xdskfiles/

The board requires a 9 volt *AC* power supply capable of >250 ma. A 9 VAC 780 ma supply with the right plug is available for $8.99 from Radio Shack (Part # 273-1630).

Price is firm, units are guaranteed against DOA. MO gets next-day shipment, personal checks OK but I may wait for them to clear. At this price UPS or USPS COD just isn't worth the hassle, but I'll ship FedEx COD if you want to pay the extra cost. Sorry, no non-US shipments.

If you want one send me a message and I'll reply with the information you need to order one.

Thanks,
Randy Cole

Great little radio. I purchased one to add to my collection. My first handie was a FT-470. I loved it, but when the FT-530 came out I sold it and bought the 530. Over the years I decided to get a second handie for special purposes. To that end I got a FT-50R. The 50 is the first and only Yaesu I've ever owned that I was disappointed with. I purchased the VX-1R to replace the 50. It is great. It is VERY compact. A couple limitations to acknowledge up front because if you can't get past them you won't be happy. (1) it is strictly lower power ops (2) it stinks at DTMF (clumsy, especially in manual mode). The receive on this is solid coverage from 76-999 MHz (broken into 8 bands) plus AM broadcast bands.

I love my VX-1R and my FT-530, I won't part with them anytime soon. I also love my FT-5100. (PS I do have a Kenwood that I love too, so I'm not just a Yaesu nut.)

1740. INDEX LABS QRP Phone number?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-17 00:00:00 UTC
From: Tom Nicastri <tnic@IDT.NET>
Message-ID: <6cc38o$ni4@nnrp2.farm.idt.net>
Source record: 153281

I have been unable to contact Index Labs maker of QRP HF rigs.
The phone number on the Web page has the wrong area code. When I got the right area code a freaking Fax answers!

Some way to run a company. Anyone have a valid phone number for this company.

I have to tell you I am reconsidering my purchase if the company is this hard to contact!

Thanks
tnic@idt.net

1742. Question re: Neutralizing FT-101B

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-17 00:00:00 UTC
From: jbarrett@remove.stny.lrun.com
Message-ID: <6cc59u$om7$1@m5.stny.lrun.com>
Source record: 153283

I recently picked up an old Yaesu FT-101B, which works well, though it definitely needs a new set of 6JC6C finals. I've ordered a matched pair.

At some point in my web browsing, I came upon a site related to the FT-101 series, in which it stated that the fixed 100 pF @ 1000V mica capacitor connected in series with the 10 pF variable neutralizing cap should be replaced with a 10 pf fixed silver mica. It was explained that the reason for this was due to differences in the characteristics of late-model American-made 6JS6C's compared to the Japanese NEC tubes that came with the FT-101 as original equipment.

100 pF to 10 pF seems to be a rather drastic change. I'm wondering if any FT-101 owners have performed this mod? Is it indeed necessary? At present, my Yaesu has one Japanese final of unknown maufacture, and one RCA final. There is indeed something screwy with the neutralization, as I can't get a symetrical IC dip at any point in the variable cap's adjustment range. Not sure if this is due to lack of the modification, or to using unmatched tubes of different manufacture/vintage.

Thanks in advance for any info.

Hmmm, I used to have no problems contacting them. Last year I purchased a
few QRP-Plus's from them for sale here in PA-country. Their address and
phonenumber used to be:

Index Laboratories
9318 Randall Dr. NW
Gig Harbor, Washington 98332
T:(206)851-5725
F:(206)851-8385

On the other hand, the QRP-plus is now sold through SGC. The did a
wonderful remake in my opinion. You can contact SGC at
<http://www.sgcworld.com>

Kind regards,

Jan Willem Luiten.

1746. FS: MFJ 1270B TNC

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-18 00:00:00 UTC
From: jrerlewe@mtu.edu
Message-ID: <6cfhop$9c1$1@techsrv1.tech>
Source record: 152999
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.swap

The Husky Amateur Radio Club is offering for sale 1 (one)
MFJ 1270B TNC-2. This TNC allows operation of both HF and VHF packet at
300baud and 1200baud.

Items included:
-power connector with molded attached cable (new)
-Manual.
-Fast-Start guide.
-Box

We are asking $60, OR BEST OFFER, for the unit. It is in fine working
order and has served us well for years. The only reason we are selling it
is that the 1270B has an internal delay in KISS mode only. So if you are
the SYSOP of a BBS that runs on your computer, it may be a slow TNC for
you. In normal packet operation it works fine. Only in the KISS mode does
it have this delay.

If you are interested, Please reply via email to jrerlewe@mtu.edu
or call (906)-487-4151 and ask for me, Joe.

Thanks, 73,
Joe N8OUZ

Hope this helps:

SENDING CW

Morse code is sent by keying the DTR line of COM1, COM2, or the
STATUS line of LPT1 or LPT2.

The circuit needed to key positive keyed radios from COM1 or
COM2 is a 1K resistor from DTR (pin 20 on a DB25, pin X on a DB9) to
the base of an NPN small signal transistor (for example, a 2N4400, a
2N3904, etc.). The emitter of the transistor and the ground lead of
the transmitter keying cable are connected to SIGNAL GROUND (pin 7 on
a DB25, pin X on a DB9). The collector of the transistor is connected
to the transmitter keying cable (hot, not ground side).

The circuit needed to key positive keyed radios from LPT1 or
LPT2 is a 1K resistor from SLCT (pin 17 on a DB25) to the base of an
NPN small signal transistor (for example, a 2N4400, a 2N3904, etc.).
The emitter of the transistor is connected to STROBE (pin 1 on a
DB25). The ground lead of the transmitter keying cable is connected
to SIGNAL GROUND (pin 18 on a DB25). The collector of the transistor
is connected to the transmitter keying cable (hot, not ground side).

There was a man who really took care of his body. He lifted weights and jogged 6 miles a day. One day, he took a look in the mirror and noticed that he was tan all over except for his penis. So he decided to do something about it. He went to the beach, completely undressed himself and buried himself in the sand, except for his penis, which he left sticking out!

A few minutes later, two old ladies weere strolling along the beach,> one using a cane. Upon seeing the thing sticking up from the sand, she began to move it around with her cane. Remarking to her friend she said "There's no justice in the world". Her friend asked what she meant?

She replied: "When I was 20. I was curious about it,
when I was 30, I enjoyed it!
when I was 40, I asked for it.
when I was 50, I paid for it,
when I was 60, I prayed for it,
when I was 70, I forgot about it,
now I'm 80 and the damn things are growing wild on the beach and I'm to old to squat! "

1760. Kenwood TMV-7A Mod Problem???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-18 00:00:00 UTC
From: Swtempo@worldnet.att.net
Message-ID: <6cf9qd$6qf@bgtnsc02.worldnet.att.net>
Source record: 153098

I performed the mod to my TMV-7A and the radio still performs like the mod wasn't done.
I have done the full reset to my radio with both the reset button behind the face plate and by holding MR while turning the radio on. The radio still operates as though the mod wasn't done. I even took a magnifying glass and looked closely at where the resistor was removed to be sure the area was clean and no solder splashed to make a bad contact somewhere. Everything was very clean and just fine.
Just to be sure, I removed the chip resistor that had the number "0" right below it. The only other chip that was there had a number "1" below it. I did not remove that one, just the chip next to the number "0". The green jumper wires that the supplement talked about are still intact. They were never touched.
I do remember that I did not reset the radio right after performing the mod, and that I started using the radio and programming some of the memory features and things like that. After realizing that the radio would not go below 410 mhz, I did a full reset of the radio to see if that would make the mod work. It did not. I've tried resetting the radio many times and still it performs as though the mod wasn't done.
I don't know what else I can do. I've double checked the work and reset the radio many times. I even put the chip resistor back into the radio, did a full reset, programmed some features and used the radio normally. Then I started all over again and removed the chip and did a full reset before doing anything else. It still did not work.

>anything else you might think I should need.

Only problem I see is your expectation of 56K access over the amateur VHF
bands with (ordinary?) radios. NOT easily possible, if at all. You'd need a
broad band type transmitter receiver (2) and that won't be as easily obtained.
Most high speed amateur user operations are at 9600 baud now... that's about
the limit of ordinary ham gear... and far too slow for regular internet web
access.

Ed

1765. Motorola Mocom 35 parts needed

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-18 00:00:00 UTC
From: kllkradio@zapcom.net
Message-ID: <34eb4190.231863854@news.zapcom.net>
Source record: 153103

Hi,

I need some parts for a Motorola Mocom 35 that are either no longer
available or prohibitively expensive from Motorola.

Here's the list:

Mounting bracket and associated hardware. TLN-4693A

Hang up box TLN-4416

Power cable TLN-6445A

Microphone cord 01-80724B92

If you have any of these items, please email me. I have a working
radio that I would like to put into service, but without these parts I
can't use it.

Thanks,

Brian Henry, WB6QED

You might look at "Simple Low-Cost Wire Antennas for Radio Amateurs", by William I. Orr (WA6SAI) and Stuart D. Cowarn (W2LX), Radio Amatuer Callbook, 1990, ISBN 0-8230-8707-7. This US$13.95 paperback book discusses several home-brew verticals which might meet your needs. In the chapter on "Invisible Antennas" on page 134 the authors describe a "flagpole" antenna, constructed from readily available Aluminum tubing, set in concrete in the ground, inside a PVC insulating collar.

1772. FS ETO Alpha 76A - Attention Florida Hams.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-18 00:00:00 UTC
From: art2@pipeline.com
Message-ID: <34ec6487.12383481@news.pipeline.com>
Source record: 153110

I have for sale the following piece of equipment:

One - ETO Alpha 76A, HF linear power amplifier.
Plate power input: to 2.5 kw PEP/SSB, 1 kw average or carrier, CCS.
Drive power: nominal 100-120 watts PEP, 60 - 80 watts carrier. Tube complement: Two Eimac 8874 ceramic triodes in grounded-grid. Primary power: 220-259V/10A or 110-130V/20A, 50-60 Hz, single phase.
Size: 7.5" h x 17" w x 14.75" d. Weight: 65 lbs.

This unit was in occasional service prior to hurricane Andrew ('92) and has been in storage since then. About a year ago it was taken out of storage and an attempt was made to put it on the air but the unit would not load. After investigations by a qualified technician it was detemined that the filament in one of the tubes was gone. Also, there's a strong possibility that the capacitor bank would have to be replaced as evidenced by a very ocassional sparking sound (probably the result of being off the air for so long). Power supply appears to be OK. Everything else seems to be in good condition. The only thing marring it's physical appearance is some discoloration and minor spot blistering of the front panel's paint.

I will take the best offer over $ 250 with pick up at my Miami address. Otherwise, shipping charges will be by the buyer and I will take care of the packaging. Please note: this is a heavy piece of equipment.

This is a good chance for someone to acquiere a fine amplifier if willing to do the necessary repair work..

Please E-mail to art2@pipeline.com

Art, WB4VVO

>Mike: Why doesn't your FT-101ZD have the WARC bands? Mine does. Rudy,
>K8SWD
>

Hi Rudy. There were a few versions of the zd. Yaesu seemed to really have a thing for the 101 name. I know of the one without warc, notch, or fm, and the one with. Any others, maybe in between these??

The manual I got with this one does show the warc bands and notch! I guess it's not the manual that came with this particular radio. Since ten meters uses four crystals for the different parts of the band, I can put in crystals for the warc bands in the upper ten meter positions and lose 29 to 30 mhz, which I don't use, since it's mainly fm anyway.

Thanks for the interest!!

Hello!

I have an 8-channel Motorola Maxtrac/Radius VHF-Lo Band radio. I have 4 channels programmed to Red Cross frequencies, and used the RSS to successfully program the other 4 channels to local 6 meter frequencies. Is this radio capable of tuning both sets of frequencies without re-tuning the radio? At present, it transmits AOK on the Red Cross frequencies, but does not on the 6 meter channels. I did notice during programming, that the RSS displayed a caution/error message on the need to possibly re-tune. Any suggestions or assistance would be greatly appreciated on this. Thank you in advance!!!

Source record: 153120

Hello
I am trying perhaps am imposible project. I'm trying to convert a Motorola Mocom 70 to a mobile repeater for the Fire Department I work for.
The input and output frequencies are approx. 8 mhz apart.
I have managed to get the receiver and Transmitter operating separately.
I have also managed, although not perfectly, to couple the audio from the receiver to the transmitter, but I believe I need a matching network to provide the proper impedance between the two stages.
I also need to build a COR circuit
I need help from anyone that can help me to finish this project with any ideas you might have for matching circuits and COR circuits and where to properly place them.
Any helpful comments are welcome.
Thanks for taking the time to read this.

John:

First off, congrats for your son! Mines only 3 but he already knows "A"
and "T".
Anyway, instead of building an AGC have you thought of adding filtering
to the audio stage? I wonder if a DSP filter would be a more effective
solution, but having no first hand experience I do not know if DSP can
offer any clamping action to limit tstorm crashes and the like. Anyone
else out there know if this is a valid route of thinking?

Just my 2cents

Well folks, I have taken a trip to both sites. The first one is definitely a ham site.

As to the other.....There is a segment called "care and Feeding". It states that these are designed for '4 Watts dead key" or "12 Watts PEP". Care to make a guess what they are for? Unless the major part of ham radio has gone QRP, these aren't for us. I only wish these pieces could be taken off the market. I've seen some in the past. What a mess as far as how they are built and the signals--- wow, what a mess.

Alan,

I bought one new and still use it. I have been very satisfied with the radio. The anti-vox is a little weak, but easily fixed. The VOX adjustment for the MIC is not what I would like; seems low on sensitivity. Those are my only complaints. Be aware that the radio cannot be run on an external 13Vdc supply.

Randy:

I'm no expert on Mocom 70's by a long shot. But I do know that you'll
likely find the biggest swing in voltage in, or near the squelch
circuit of the radio. Take some measurements with a voltmeter
and note the voltages, or lack of, with no signal present.
Now do the same with a signal present. The location of the
greatest voltage swing is your best shot at coupling a
COS to the radio (your looking for at least a 3VDC change
either way). Coupling the output from the radio to the base
of a transistor (done properly) is about the most fundemental
COS there is. If you need to switch larger voltages, use the
transistor to switch a relay, etc. If you have a ARRL Handbook,
take a look at the section on transistors..you'll like
find just what you need.

Goo luck,

Shawn WB6JWB

Don't touch the VCO. The voltage for the VCO (and most other) test
points is nominal. The change in power across the band suggest a
mismatch to the antenna. By how much is it changing and what are you
using to measure the power?

Another short point. In a sailing vessel, the foc'sle (derived from forecastle?) was also the most likely downwind point in the vessel. Therefore, the least desirable real estate, especially after six weeks at sea hauling a cargo of goats.

1806. HF vertical townhouse options

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-18 00:00:00 UTC
From: cphillips@engineer.com
Message-ID: <6cdm1l$5dt@bgtnsc02.worldnet.att.net>
Source record: 153200
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

I'm going to be stuck in a townhouse for a while, but I think
maybe I can get up a vertical for HF. I have a micro-postage stamp
sized "back yard", where I was thinking of putting up a vertical
as follows:

Get a 21' piece of chain-link fence type post, and put a CB 108" whip on
top of it (electrically and mechanically connected to make a vertical of
about 30'). The pole, will also be a flag pole, to make it socially
acceptable (I hope).
Feed it with "ladder line" at the bottom into a tuner. The "other"
side of the ladder line will be connected to radials, of which I can get
three or four of about 30' (hidden and routed outside of
my micro-postage stamp lot). As "great?!" as this is, it is complicated
by a long carport with a metal roof which will be about 3 feet from
the vertical. The 8 foot high carport runs along behind the townhouses,
providing covered parking for all of them, and is probably at least 100'
long.
I was thinking of trying to load this on 40-10 meters.
BTW, I've used chain link fence type poles in the past as antenna
mounts, and am familiar with what they can stand mechanically.

However,given the carport, I was thinking of maybe using the 21' flag
pole to mount a mobile type "HamStik" type antenna might be better, and
use the carport top as the "ground plane" for 20-10 meters, and
try to sneak a horizontal wire out for 40 and 80 meters.

Your opinions would be appreciated.

1807. Re: Vox for FT50R

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-18 00:00:00 UTC
From: Rudy Marcelletti <rudym@net-link.net>
Message-ID: <01bd3c1c$d56a3460$6d849cd0@rudym>
Source record: 153201

Steve and Roger: The VC-23 is the correct headset to operate the FT-50R in vox mode according to Yaesu. I had one. It did not work. I sent it back to AES and they sent me another. While it was in transit, I read somewhere that the two pots under the NiCd sticker could be tweaked up a bit to increase the tx audio. I did this. Vox worked. For awhile. I re-tweaked the pots. Vox worked, for a while longer. Vox no longer works. About a week ago I talked to tech at Yeasu who told me the 2 pots I was messing with did not have anything to do with vox (he did not know why vox started to work when I messed with them). The tech said there is another internal adjustment for vox trip. With my vox gain wide open, I need to scream to get a trip. I will call them tomorrow and if I find out anything further, I'll post it. Mine was worked nicely last hunting season with just a whisper, and that is the way it is supposed to work according to Yaesu. Also, the FT-50 does have some of the vox stuff built in, unlike the Yaesu VXR1 and and the FRS rigs, which take a different head set (which contains the vox circuitry). The vc23 will work in ptt mode only on those rigs, however. By the way, I tape recorded my audio from my FT-50R and the audio using the headset is very nice and is almost equal to or in some cases better than the rigs own mic. I have the Yaesu speaker mic and transmitted audio from it is very poor in comparison--very tinny and loud. I had called Yaesu about the shorter pwr switch mod to hopefully prevent the radio from inadvertently turning on in a pocket or briefcase. I was sent two replacements. I also was sent two replacement function knobs. Maybe a misunderstanding. Maybe they have had some fall off. No charge for either.

If you guys find something out about the vox, please let me know. I'll do the same. Thanks.
Rudy, K8SWD

The principles used in speaker phones work well. Use amplitude peak detection with some filtering of your "Voice Source" to create the envelope or a DC signal. Then use a comparator between the Received Signal Strength Indicator, RSSI or Rx meter voltage to produce an output that enables the transmitter. So if you will trasnmit when your voice level overcomes the voltage detected by a received carrier. The trick with speaker phones is that they cancel feedback between speaker and microphone by balanced feedforward and a fixed position between the two. Otherwise you may need to use headphones.

There's not much to it when the design is right. (I once designed one in the late 70's for a VOX using a "throat microphone" in high ambient noise.)

Jim -

Its really not too big a change. 10 pf in series with 100 pf amounts to
about 9 pf effective. 10 pf in series with 10 pf comes to 5 pf.

Capacitors in series are sorta like resistors in parallel. Not really
but the calculations similar.

```
------------------------------------------------------------
FORSALE -- TINSLEY LABS CLASSICAL CASSEGRAIN TELESCOPE !!!
------------------------------------------------------------

I have for sale a Tinsley Labs 8-inch Classical Cassegrain
telescope, complete with the original German equitorial
mount and clock drive. Tinsley produced these fine scopes
in the mid 1960s and are known for their fine optical and
mechanical properties. They were (are) research quality
instruments which are quite rare and retain their value.

In mint shape, they go for around $3000. The one that
I have is in very good condition, but needs a few minor
items to bring it to "mint", as follows:

- mirrors are excellent, no scratches or chips, and
bright. Although very good and workable, a
recoating would make them mint.

- clock drive needs an external 12V battery pack and
rheostat to make it operational (this is as it was
intended). A nicad pack or motorcycle battery would
be appropriate.

- A low tripod or pedestal base (about 20" high) and
"rocker box" is needed for the equitorial mount to
sit on.

- the optical tube has some scratches in the paint and
a small dent, which absolutely does NOT interfere with
the optical path. Paint scheme is the original Tinsley
gray.

Thats about it. I just don't have the time to use this
scope and it's too valuable to just let it lay idle.

I'm asking $2150. for scope and mount (and absolutely will
NOT sell them separately).

The equipment is located in Monmouth County, NJ. For
further information, please contact me.

Thanks,

>about 30'). The pole, will also be a flag pole, to make it socially
>acceptable (I hope).

Hello Curt,

It would be helpful to know whether or not this "flagpole" is electrically grounded at its base. I will assume that it is, because it would seem to be very difficult for it not to be.

> Feed it with "ladder line" at the bottom into a tuner. The "other"
>side of the ladder line will be connected to radials, of which I can get
>three or four of about 30' (hidden and routed outside of
>my micro-postage stamp lot).

Adding that information into the equation makes my assumption less viable. If you were going to connect one side of the ladder line to the radials, it is only reasonable that those radials are also connected to the base of the "flagpole".

It is very unclear as to how you would connect the "hot" side of the ladder line to the flagpole. Lacking any real information on that point does make it difficult to continue with any meaningful analysis or suggestions.

> As "great?!" as this is, it is complicated
>by a long carport with a metal roof which will be about 3 feet from
>the vertical. The 8 foot high carport runs along behind the townhouses,
>providing covered parking for all of them, and is probably at least 100'
>long.
> I was thinking of trying to load this on 40-10 meters.

No matter how long the run of carports is, and no matter how well you "load" it, it's only 8' above ground, which is pretty poor.

> BTW, I've used chain link fence type poles in the past as antenna
>mounts, and am familiar with what they can stand mechanically.

I'm thinking that I would like to recommend some sort of gamma match device to match the flagpole. That way you can avoid the problems of putting an insulator at the base of the pole. The downside of that would be that it would be a single band antenna with difficulties in QSY'ing around. On the other hand, for any band you choose up to and including 10M, you should be able to use coax instead of ladder line, if you do the gamma match correctly. I have tried such a match with grounded pole verticals and it works quite well.
>
> However,given the carport, I was thinking of maybe using the 21' flag
>pole to mount a mobile type "HamStik" type antenna might be better, and
>use the carport top as the "ground plane" for 20-10 meters,
Sorry to break your sentence in half there, but if you put a ground plane antenna on the top of a 21' pole, you don't have a ground plane until you fan out some radial/counterpoise rods/wires. Just being on the pole doesn't do it. Also, just being several feet above some metal garage roof doesn't do it either. The base of the antenna itself should connect directly to the ground plane, which is either horizontal or bent down at about 45 degrees.

> and
>try to sneak a horizontal wire out for 40 and 80 meters.

Now that is the best idea, so long as you can make it balanced and not "end fed". Is there any possibility of putting a 10' section of TV mast on top of the 21' pipe and putting an inverted vee on that for 40M band?. Then you would have a decent antenna.

If you feed it with ladder line, you could have your all band antenna, but it would still be too low to the ground to be a real performer on 40 and 80M.

From: "Robert G. Schaffrath, N2JTX" <rschaffrath@acm.org>
Message-ID: <6cet4k$hhi@bgtnsc03.worldnet.att.net>
Source record: 153227

I was wondering if there are any TNC's currently on the market which can decode the EAS/SAME protocol used by the National Weather Service as well as commercial broadcasters. In a nutshell, the signal is a 520.83 baud AFSK signal as specified in FCC part 11. I just picked up a Radio Shack NWR-SAME receiver and after doing some research on SAME it looked like something a TNC should be able to do with the right firmware.

To all that can offer assistance

I believe there are things called packet radio internet gateways. What i want to do is to have FULL Internet access (not just EMAIL) through packet radio, via the said gateways so as to do away with my ISP which costs me £12/month, and the PHONE bill, which I think is a disgrace that we have to pay for. We pay for calls to the Internet in England!!!!!!

PLEASE NOTE:-If you have never heared of an packet radio internet gateway, DONT reply to me saying youve never heard of it, and its not possible, because I jolly well know it is possible, this would obviously be the first time you have heard of it, so DONT bother to reply to me. If you DO know what I am talking about, I would very much welcome your input.

I need to know what equiptment I will need to do this, the cost, and if there are local gateways operating in the MHZ freq. range that will be able to cope with a high speed packet radio modem (56K + baud), in the NorthWest region of England. From reading stuff off the net it wont cost a fortune to implement all this. I apparently need a TNC (Terminal Node controller), radio, amplifier, and Antenna, and anything else you might think I should need. Read some info about JNOS too, presume its possible to run TCP/IP over that, with WIN95, and all the traditional internet application programs running all above that, FTP, email, Netscape browser etc etc etc. I hope to run all that little lot from a 486AMD5x86-P75 ,256K cache,16MB, WIN95, which will more than meet the needs of the Packet radio interface.

If you can help would appreciate it

Cheers

Ian

I'm trying to get more info. on this radio, and
there's definately a lack of it on the internet
for whatever reason. I'm curious what the RX
range is out of band? I guess stock it doesn't
even do out of band... what can the radio be
modified to do as far as TX/RX on VHF/UHF? My
primary concern is to be able to RX UHF-hi/Tband
for commercial freqs., but homefully it has
transmit capability as well. Any info on the
TX/RX ranges would be greatly appreciated.

I am off on a building project. I am going to build both a pair of
3-400s and a single 4-1000.

Looking for the following, will trade, buy, scrounge, and or beg.
Donations accepted and appreciated. Pointers to sources appreciated,
thanks in advance.

Large roller inductor for PI network
Air Variables for PI network
Vacuum variables for PI network
High wattage resistors for input T-pad
Sockets for 3-400s for use with chimneys
Another 3-400
Socket for 4-1000
Chimney for 4-1000
4-1000
Plate transformers - 3KV to 4KV
Filament transformers for 3-400s and/or 4-1000
Miscellaneous door knob and blocking capacitors
B&W bandswitch with inductor(s)

Anyone with a fried, trashed, or otherwise AMP with parting value, i.e.,
SB220/221 or something similar. Homebrewed certainly acceptable.

Have on hand to trade:

SB-102 w/Power supply. Tubes overall in good condition. Finals fine.
Can and will pull all to test.
One Westinghouse 813 - New.
EF Johnson socket for 813
Plate cap for 813 and similar sized caps
Junker HW 2036A
Stack of Heathkit manuals - New.
Also have typical parts horde.

Hope to get some good hits!

Thanks to all,

Bob Bethman
N0DGN

OK< so why are you posting to other groups if your talking policy. and are you one of those " self important twits" I was talking about before. you know the type:

1) he sits back at a club meeting till an argument starts then he's in it throwing around comments that have nothing to do with the original question.

2) ask him a question on how to do something,and he'll bore you with what he thinks will be a better idea.(ie.you want to build a dipole-he thinks a yagi is better)

3)and lets not forget the one who buys a radio,opens it up, plays with every setting to make it work better. fries the radio. sends it back to the store"saying I want my money back" then post's on the ng's on what a peice of crap it is.

LOUIS & BOB are right, we need a little more input and good will from each other, and a lot less debate on the merits of a test.

I also would like to add that if I knew the hobby was so full of these "twits", I would have stayed with radio control.

You can download the TAPR TNC-2 manual, on which the MFJ manual is based,
from ftp.tapr.org in /tapr/software_lib/tnc/tncdocs.exe (self-extracting).

All:

I'm going to have to send my FT51R from Yaesu in for repairs. It turns out that the radios BNC connector is now free turning in a 360 degree circle. The radio still functions, but I cannot remove the antenna. Yeasu advices me that a solder joint in the radio is loose and that it needs to be resoldered to hold the antenna in place. I was wondering if someone else experienced this problem. It seems to me that the BNC would be a little bit better reenforced than it appears to be.

Just built one. Took about 4 or 5 hours, a pretty easy project, a couple of very minor bugs involving the fab of the HF pickup loop (a length of coax that runs through a toroid), but the kit
provides 3 times as much material as you need so you can experiment. One of the four supplied diodes for the bridge was 40 mV off from the rest, but I used it on the HF side so it shouldn't present too much of a problem.

The unit contains two separate circuits for VHF and HF - the VHF side is a monimatch-style - on separate ends of the circuit board. The circuit uses op-amps to isolate and amplify the power readings, so DC power from a 9V battery or wall-wart is required.

I can't calibrate mine exactly because I don't have a known-accurate RF wattmeter but it seems to work just fine. My antennas are indoor, I live in California, my SWR readings look a little higher than usual, but, then, my roof hasn't been dry for a month.

A great project for anyone who needs a two SWR/wattmeters for the price of one.

Clif's suggestion is good. But on the matter of sleeves, just use short
pieces of heatshrink on each wire. Shrink each one over its pin after
you've soldered the wire. This makes a neat and short-proof mass
termination.

Body handling: Binary attachment payload not displayed: vcard.vcf

I most certainly did see this problem, but on a Kenwood 79A HT. I have the Yaesu also, but I think the problem we've experienced is mostly the nature of the beast: Long antennas and hanging next to one's body ona belt clip puts a lot of stress on that connector.

1856. Re: TM-V7A PRO's & CONS

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-19 00:00:00 UTC
From: enzo <enzo@nospam.net>
Message-ID: <01bd3d70$770e4fa0$ac3ed3cf@default>
Source record: 152952

I haven't had any problems at all with intermod with my V7A, even when in really bad areas that make my HT totally useless. Normally the V7A also picks up a lot of intermod in those areas too, but I just turn on the AIP (Advanced Intercept Point) feature and it kills the intermod perfectly. It's almost too good to be true. Maybe the users reporting intermod problems haven't tried this feature?

The Blue on White/White on Blue doesn't bother me. I would normally prefer red or orange, but actually I've gotten used to the blue now. The display isn't sealed perfectly though - and all the V7As I've seen have some dirt or dust inside the display. That's kind of lame. Also, the VS3 voice synth doesn't seem to be adjustable for audio level, and it's **blaringly** loud compared to the RX audio output. So it has a few quirks, but it has a very good interface IMHO - and I find the remote control option to be VERY valuable. When I need to hit a repeater outside of my school campus, I just activate the V7A's cross band remotely just long enough for the QSO and shut it off afterwards. That way I don't use the battery so much and there's minimal chance of interfering with other stations.

As far as being difficult to read, here's how I solved the problem - you might like this solution - it's really pretty cool. After I heard about problems with readability in sunlight and such - and seeing a friend's Yaesu 8500 mounted in his overhead console, I got to thinking that a similar mount would be good for my car. Unfortunately, my car doesn't have an overhead console, and aftermarket ones are very expensive. The easiest and best solution was to buy the Kenwood remote mounting kit (I used the DFC-4) and get a rear view mirror replacement mounting arm - you can find them at most Chief Auto or Kragen auto supply shops. Glue the mounting shoe in the right location and let it cure for 36 hours. Drill a hole in the back of the DFC mount and "dremel" off the extra length of the mounting screw after screwing in the arm through the mount. (I reccomend mounting over the rear view mirror if you have the room, but it's up to you) Fit the arm on the shoe after it cures and adjust to taste.

That's basically it! You now have an "overhead" display that can be viewed without having to divert your eyes off the road (much) to see or adjust. By mounting high, you are keeping the display facing away from incoming sunlight, and by mounting it on a rear view mirror stalk, you can aim it any way you please, for either you, or your navigator, or whatever. No viewing problems at all. Best of all, you get the feeling like you're operating radio equipment on a large airliner or other sophisticated aircraft. 8o)

There isn't a way to clear a single memory.....you just overwrite it
with something else. At least you can overwrite it something else in
a different band so that it doesn't show up (unlike my FT530 or FT8000)

Well, you could block the memory.....

>
I find this annoying as well....having to remember if I use the dial or the
up/down
keys for things like memory, VFO, Volume, Squelch.

Dual watch can be used to monitor a UHF memory while on the 2m band. I use
this

occasionally to monitor our local UHF repeater while also monitoring the local VHF
repeater.

I don't like the squelch behaviour. AUTO doesn't work in all cases, and manual tends to
be too tight in some cases. Especially annoying when I have it scanning through the
memories or using dual watch.

The band arrangement is kind of a problem....its also a problem that the same button is
used for SET. If you don't hold it long enough or forget that you have to....you end up
jumping into the next band...and then have the cycle all the way around to get back.

> The low power can be a serious limitation is your favorate repeaters are
> not local.
>
The difference between 50mW and 500mW is kind of big....another step might be nice...or
if the Low wasn't quite so low. I can work out local repeater from the high parts of town
at 50mW...but the lower parts need 500mW...and the difficulty of changing transmit power
means I leave it on high power all the time.

> *HUGE* battery charger!
>
Yes the brick is big. It would be nice if there was an option of an external charger....
so I could charge an extra battery without having to buy another VX1 (otherwise there's no
point to having an extra LiOn battery, except to prepare for when its 300 cycles are up).
Too bad the VX1 can't be dropped into a charger....

> Non-standard 4-pole 3.5mm jack for speaker mike and data.
>
> Conclusion:
>
> Nice toy but the firmware is beginning to irritate me...I am finding
> myself using the FT51 more as time passes as the FT51 is such a joy to

> will it be triple-band?

Alas, the difference between lugging around the FT530 and the VX1 all the time....I choose
the VX1. (aside from the fact that my FT530 is out of service while I wait for new
batteries for it. Already have 4 dead packs....maybe the NiMH will be better).

Firstly I would Like to THANK DAVID TSE for his very informative and HELPFUL reponse to my intial posting, CHEERS DAVE, I will ask you a few things in a moment

Before then I would just like to respond to (I KNOW I SHOULDNT!!!! but I am going to) the other previous respondees, who were of absolute NO help, and I suggest have responded to these series of postings because they wanna flame!!!!! SIGH.

Why I want to connect to the net without an ISP, is to improve my connection speed (hopefully) have a closer more intermate internet connection to the NET than my ISP can provide (do away with firewalls etc BECAUSE I wanna experiment with net) and NOT have to pay the PHONE bill. The Americans dont pay for local calls to their ISPs, until that happens in UK, I want another way of connecting that doesnt invole a phone bill. If people wanna pay for their Internet connection, well I aint going stop them. But as for me I want to explore the various technological solutions to this problem, because a) its interesting, b) will save me money, and c) will provide an answer as to wheather its possible to implement realatively cheaply.

In response to WALT davidsons comment, I dont mind paying the ISP costs but the local phone call cost I do object to paying for. It goes against the very spirit of the Internet. In America they can leave their computers connected to the net 24hours a day 365 days a year presumably, and all they pay is the ISP. Well thats What I want too over here.
Further while ever there are people like you Walt, who are happy to go along with the main stream, progress will be slow. The Innovators through history have always been the people who have not been satisfied with the way things are.
I have even considered a small cheap two way SAT link to the NET. Apparently Bill gates has one up on me on this one, apparently he intends to implement a SAT system which would enable anyone with a 2 way sat link, (which units i think he is going to develope which will be very cheap), to link to the NET.
I too think for better communications, much improved speeds and services, it would be better to connect to the NET NOT via a modem and PHONE line, and to dispense with that archic part of the link altogther. So I am not the only one who thinks the modem phone link is a bad idea.

Right so having outlined my reasons for wanting a different way of connecting to the NET I will now go on to respond to the points made

by David Tse

>
Whats the max. range (in miles) of line of sight comms so as to implement a 56K connection for eg?

From your posting David then, I take it that full internet connection with all the traditional internet programs is possible to implement and that what I wish to atchieve is possible.

The implemtation of a Gateway you mentioned 56K wirth ethernet link is interesting way to do it, and as you pointed out may be the only way possible with speeds of 56K and above. But Hopefully my research will determine wheather it will be possible to implement a stand alone PC connected to modem and radio as outlined above for 56K and above.

Any Idea of costs involved David

Cheers

Ian

Yes, I bought the distributorship from EFJ Devices who manufactured the product. The name of my company is Classic C.B.'s. You can verify this information if you please by looking up EFJ Devices homepage at carl@efjdevices.com. You will see that it will verify my shops name and the phone number I listed to call.I decide who and what shops I let carry the Bulldog Wattmeter. I have nothing to lie to the club about I just thought I would list a great product that i feel would be a great asset to the radio users. If you have further questions you can call me at 1-888-696-1577or check it out with CarlMotsinger at 615-847-9704.

This might mean that it has a version of KISS which resets the parameters
to the defaults after a while with no packets coming in and the defaults
aren't optimized for your operation.

Upgrading to TAPR 1.1.8a or 1.1.9, or using a KISS-only eprom will fix the
problem.

1866. FT10 squelch behavior

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-19 00:00:00 UTC
From: sylvain lamarre <slam@bbsi.net>
Message-ID: <01bd3d72$6238d620$762dc901@SIL-118>
Source record: 152962

Hello everyone,

I have an FT50 since november 1996; I use it intensively (read: 6 to 8 hours/day) mainly as an excellent public services scanning radio. As some services use data transmissions on the same channel as clear voice communications, i have to program the right CTCSS tone to hear only the voice portion (if not, the data transmissions sounds like an open squelch radio).

The FT50 acts as it is expected to: filter out the data transmissions (which aren't PL encoded) even when in the memory scan mode (can't say that for the VX1R... but this is another story).

But for the FT10, it simply cannot resume memory scan when stopped on a channel encoded as explained above: When the PL encoded voice transmission stops and the data transmission begins , the FT10 simply "keeps the gate open" and the loud hiss of the data TX comes in loud and clear...

So: Does someone ever had that experience ?

Anybody has an idea of what could be the problem ?

Sylvain.

1867. FT50 antenna (and then some VX1R words)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-19 00:00:00 UTC
From: sylvain lamarre <slam@bbsi.net>
Message-ID: <01bd3d76$7468c360$762dc901@SIL-118>
Source record: 152963

Hi everyone,

This subject has been discussed may times before, but if anybody is scanning mainly VHF frequencies with his FT50 like i does, the VERTEX VHF antenna is an excellent choice.

This antenna is 4 inches long, and gives me a full scale reading for a signal in the 166MHz region, compared to 2 segments with the original antenna. And you can always keep the original antenna in your jacket's pocket, your glove compartment in the car, etc., if UHF operation is needed.

I hesitate to buy any other "dualband" antenna: I've read from one guy that he has good service with the antenna made for the Standard C508 radio, and that he recommand it because it is much better than the FT50's original. But then in another reading, i see the results of another guy who has done intensive testings with differents antennas, and this same C508 antenna comes way down after even the original antenna.... Who do we believe, before investing 50-60$ (Can) for a rubber duckie ? I opted for the (24$ Can) VERTEX VHF antenna. Simple, cheap, and performing (try it on a VX1R and see the bargraph jump to full scale on VHF where the original can't even bring in something...).

Speaking of VX1R, i've bought one, and sent it back two days after... What a deception after having been so impressed with the FT50! I'm proud i haven't sold my FT50! The only good thing i have found about is the battery recharge-discharge cycle. Very impressive. But all this hype about so much frequencies to scan and listen to, but in reality you simply can't do much more than 2M and 440 listening with the razor-sharp-tuned antenna that comes with it... And if you want to scan with some memory channels programmed with CTCSS'ed frequencies, forget it; The little evil is way too fast in scan mode to hear anything CTCSS'ed (or the sensing of CTCSS is on the slo-mo side).

For me, the best radio is still the trusty old FT50. I've had 12 portables in the last 10 years, and this is the only radio that still looks and functions like a new one, after 15 months of 6-8 hours a day clipped to my waist. Only way to tell it is not a new one is the on-off button on which the lettering has disappeared.

...Too bad the original antenna doesn't gives full credit to the excellent sensitivity of the radio, outside the ham bands.

Sylvain.

: as far as how they are built and the signals--- wow, what a mess.

: Bob Bethman
: N0DGN

Many of those "11" amps work very well with low power 10(and 12 too) Mtr
gear.
As for the spectral quality, usually a good low-pass filter will take care
of it.

These high speed links are normally on a point-to-point basis, not for general user access, normally for mail links etc. I think they are normally on the microwave bands, probably 10GHz.

Normal BBS/node access is 1200baud or 9600baud. Don't forget that is the maximum uninterrupted data transmission rate - the actual throughput is dramatically reduced when the data is packeted (if that's a word?) and after collisions with other stations' transmissions. As an indicator 1200bd will facilitate a data transfer of 60 bytes/sec on a reasonably clear channel.

Even if you can get a 56k user access to a node don't forget that node won't be the gateway to the 'net. The TCP/IP routing will go through a number of other nodes which could be any bandwidth you care to think of.. and yours won't be the only TCP/IP traffic.

..Then don't forget BR68 1(7) and the other sections regarding message content.

Get an ISP with a local call number, put that in Friends & Family (if you're on BT) and save the surfing for the weekends. Then it's only 0.9p / minute.

(or alternatively you could work for a company with an internet-enabled network and RemoteAccess with dial back :o))

If I am not mistaken you need to look again at the price.
That is not a Dollar Sign $ in front of that 1,700.00 price tag.
That is a British Pound Sign and the rate of the British Pound
to the US Dollar today is. 1 British Pound = $ 1.63 Dollars.
SO, you take the &1,700 BP price tage and Multiply it by
$. 1.63 US Dollars and you come up with a really big figure.
:-)
2,771 US Dollars,,,, I might be wrong but thats my story
and I'm stickin' to it

Visit your local computer store, and check out the RS-232
pins/sleeves. Solder your wire into one end, and tin the
other. Place heat shrink on the wire, and then solder into
place on the 13 pin din. Works well with 8 pin mike connectors
also. Don't recall the specific name of the sleeves, but they
are available. Good luck es 73 - David

1882. HF Equipment Suggestions

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-19 00:00:00 UTC
From: "J.R. Smullen" <maccpl@geocities.com>
Message-ID: <6cido3pug1@news00.us.hsanet.net>
Source record: 152978

OK, OK... I know this is a bit of a lame question, but I will ask it anyway. The other night I successfully upgraded by ticke to general from technician. I've always wanted access to the HF bands and I've been busting my butt learning the code since I got my tech license this past December. Anyway, all this happiness was soon dashed when I took a look at the prices in the HF sections of my Ham equipment catalogs. As you mght have imagined, until the other night, i have been focusing on the neat shiny UHF/VHF equipment. Expensive, yes... but not totally unreasonable. But last night WOW!!! The 3 or 4 rigs I picked out were all over $1700. Several were over $4000. And THEN i took a look at the antenna section of the catalog.

First let me say that I probably won't look at used equipment very seriously. The prices I've seen there are not THAT much lower, and I wouldn't want to get a lemon with no warranty. I also would feel a bit inadequate in the dickering department, with no more ham experience than I have. So what's the alternitive? First I've found great solace in this news group in the past. So I'll try it again.

Any and all suggestions will be greatfully appreciated.

Regards,
J.R. Smullen KB3B YZ/AG

I have for sale 2 kenwood H.F. Radios. TS 440AT with matching PS35 power supply.Also Matching Kenwood speaker, Manual and original box. CW and SSB filters installed asking $950.00 The TS940SAT has CW and Sideband filters, the IC232 Interface D104 Mic Manual and original box. Asking $1050.00. Both these radios are in exellent condition. Email Bob W2SF1@JUNO.COM

1884. Re: Used FT-767GX or New IC-706MkII ?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-19 00:00:00 UTC
From: kilo5joe@aol.com
Message-ID: <19980219230900.SAA08363@ladder02.news.aol.com>
Source record: 152980

You have not given enough information for me to give you
good advice on these rigs.. I have owned both.. example:
What modules does the 767 have..? 2meter, 440, 6meter????
Do you have a tuner in the 767???

The 767 is a really good sounding radio on HF, and 2meter
but it is kinda complicated changing from 2meter to HF and
visa versa. also a little complicated to program in 2meter freq.
with offsets for repeater use...

Also the resale value of the 767 is not going to hold up as long
as the NEW IC 706 MKII because the 767 is a lot older..

The new 706 will have that factory warrenty also, that is something
to concider when you pay that much for a radio...If the 767 quits on you
tomorrow, you will be out $60.00 Plus Parts... I know that for sure...
I had a 767 and was proud of it because of the sound but did not
like the way it operated... the 706 MKII is also comming out with
an internal DSP that you can add, and that will make a difference on your
recieve....
Thats about all I can tell you... Both are good rigs, but I think I would go
with the 706 with the factory warrenty and the better resale down the road...

If you look at the British Prices Including VAT tax they are very close
to Usa Dollars. For instance, If a radio sells for $1700 British Pounds
including VAT Tax then it will sell for close to $1700 USA Dollars.
Basically, the British pay more for their radios than we do, but you
will
see that my simple formula works for most of the radios for sale in the
UK. Yes there are a few exceptions.

Source record: 152983

I am very disappointed in the display visibility in high ambient light. Even sent a note to Kenwood who did respond very quickly--their answer was to mount the display in front of you (kinda hard to do in a vehicle, althought the additional rear view mirror mounting is an interesting thought) which is pretty hard to do. I'm having intermod problems even with the AIP turned "on". Radio looks real nice, but Kenwood missed the mark on the ergonomics unfortunately. Think my Yaesu dual-bander is going back in the truck and the V7 to the next hamfest.

<Snip>

I experienced the same problem with my Icom 24AT. Frequent removal and reinstallation of the antenna, coupled with a BNC mounting nut that was apparently not tight enough. When I took the radio apart to resolder the connection, I removed the BNC and put a thin coat of red Locktite (tm) thread locking compound on the area of the case where the BNC flange seats. I also put a drop on the threads of the connector and tightened the nut _tight_ (with the proper tool). If you are familiar with red Locktite, you know I don't expect to have to deal with this problem again :-)

Hello all! Here is what I have to Trade:

HP1727A 275MHz analog storage oscilloscope with:

HP10017A Probe 10x
Tek P6131 Probe 10x
RF screen shield
Time interval digital multimeter(mounted on top of unit)
Users Manual
Front cover
This unit is in pefect condition. I'm the second only owner, I bought it from a friend who closed up shop in the computer board buisness.

I will concider trades for an Astro Digital Saber III
The Astro Saber has to have the following:

UHF (440-520MHz) 4W
Conventional Analog/Digital ready
DES-XL module installed and ready
Must do MODAT and repeater access tones
Matching Antenna
Non-Public safty speaker mic, in excelent condition
2 or more ultra High capacity batteries NTN4595 or NIMH battery
Rapid desk charger for AstroSaber radios
Opperator's Manual
Programmer's Manual
Radio must have all stickers on back, model#/Serial#, bar code,Flashport,etc
Case must very clean or mint condition. Will accept light scratches but display must be crystal clear. No deep scratches or engraving. Must be able to program all 255ch with full alphanumeric and unigue options for each mode(PL/DPL/Signalling,Paging,etc), or supply programming materials to program radio.

Thank you for reading,
Steve

Cross-posted to: uk.radio.amateur,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

A 56K packet link should be able to replace a phone line for local communications. If you happen to own your own ISP, this could allow you to have Internet access at home without paying phone charges.

The problem for most people is: what's on the other end of the radio link? It's probably another computer, and *it* still needs at least a 56K connection to the Internet at large. How will you provide this connection? If you have your own ISP with its own T1 connection, you just run a wire from the machine at the far end of the radio link into your main router. But if you are using a commercial ISP, you have to convince *them* to provide your far-end computer with a connection. And you probably have to provide both ends of the radio link yourself.

At the UBC amateur radio society, we have a couple of machines with full Internet access provided entirely by radio. There is one 56 kbps radio link, and another 2 Mbps link. But the "far end" of the one link is a machine in the electrical engineering building, and the "far end" of the other link is a machine in the student society offices. These machines, in turn, are connected to Ethernet or better networks that cover the campus, and have a pipe to the outside world that is at least 10 Mbps. So the radio links "extend" the campus network into machines that are not otherwise connected. But without the physical network links (copper and fiber) that covers the campus, there would be nobody for the radio-linked machines to talk to other than themselves.

Dave

P.S. I trimmed the list of newsgroups to ones that seemed at least somewhat relevant to the subject. Spamming your message to every newsgroup with "radio" in the name just means you're too lazy to figure out where your question really belongs.

Last time I was in the U.K. VAT was 18%..... now somebody figure yout the numbers and come up with an answer, cause I dont have a calculator.

Then someone can tell me why the 846 doesnt have an internal tuner... or optional switchable (as in on-off) filters....

Then finally someone can tell me what Yaesu is coming out with to replace the 900, which I have and love.... but hey, ya have to be on the edge of technology... right....

ANd oh Yeah, is the 846 replacing the 736, or the 840, or the 900, both, all, any ideas???

There's more than ya bargained for -- Pete -- KA2YDY

"Nelson" <neltang@hotmail.com> writes:
>Where can I got it (Motorola speaker ?)

Almost any external speaker will be a lot louder than the one inside the HT. With plenty more radiating area, the external speaker will be a lot more efficient. If you can't find a used one, Radio Shack makes a passive external speaker. The FT-50 works even better than the FT-51 for driving the external speaker, since the 50 has 500 mW audio output power while the 51 has only 200 mW (typical of many HTs - the 50 is unusually powerful).

Even this might not be enough if you are trying to listen to your HT inside a noisy moving car. If you need even more volume, an amplified speaker can boost the HT audio output to several watts of power. This needs to be hooked to the car 12 V power.

You did not say what the Rec Cross frequencies are. One thing, if they are very far from the 6M freqs, you'll have problems getting an acceptable SWR on the antenna. I use UHF Maxtrac/Radius radios from 441 to 468 MHz TX with no problems, even with the same antenna. That "Tuning error" message you got when programming is normal, and not normally needs to be heeded, but mayby in your case, the radio does need tuning.

1912. FT-50R and VC-23 vox headset

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-19 00:00:00 UTC
From: Rudy Marcelletti <rudym@net-link.net>
Message-ID: <01bd3cdf$8ebd8300$a5849cd0@rudym>
Source record: 153049

For those who have had trouble with getting the headset to work all the time: The vox circuitry is in the headset, but the information for its use is in the FT-50R's CPU. For the VC-23 headset to function properly, the FT-50R must be OFF when the VC-23 is plugged in. When the FT-50R is powered up with the headset plugged in, the CPU recognizes it is there and the vox aspects will then function properly. If you plug the headset in after the rig is powered up, the CPU does not "see" the headset, which will not function in vox, only ptt.

If you have been having problems with intermittent vox function--try the above.

You would think that those who designed this wonderful gadget would have thought to put this tidbit in the manual!

Give me a couple of days and I can post a jpg file of the National NCL2000 schematic. It uses a pair in paralell. It is a grid driven amp with the grids swamped with a 50 100 W resistor bank. The 50 Ohm resistor is made up of two banks of 180 Ohm 5 watt film resistor 7 in paralell to form one bank. The two banks are in series to give 50 Ohms. Each band is about 26 Ohms. Standard PI network. There is a time delay relay to keep the plate and screen voltage off the tubes until the filaments warm up. The time delay is about 60 seconds. This is very important. The tubes will work well at 6 meters. They are rated to 500 MHz. The NCL2000 runs the plate voltage at about 2700 volts at full power out and does about 1400 PEP on 10M.

Regards
James

Sorry I wasn't clear about this. The plan is the insulate the flagpole
at the ground so as to make it a "legit" vertical. The pole will be
supported with insulated mechanical members about 6 feet up.

>> Feed it with "ladder line" at the bottom into a tuner. The "other"

>> I was thinking of trying to load this on 40-10 meters.

I really wasn't very clear here (sorry, I wrote it in a hurry). I
was commenting on loading the VERTICAL for 40-10 meters, with the

complication of a big metal structure about 3 feet away...

as compared to just using that big metal carport structure as the groundplane for a "mobile" type antenna.

I wasn't thinking of trying to load up the carport... just how to either make use of it as a groundplane, or consider how it might "screw up" my plans for a ground mounted vertical.

>No matter how long the run of carports is, and no matter how well you
>"load" it, it's only 8' above ground, which is pretty poor.
[snip]
>> However,given the carport, I was thinking of maybe using the 21' flag
>>pole to mount a mobile type "HamStik" type antenna might be better, and
>>use the carport top as the "ground plane" for 20-10 meters,
>Sorry to break your sentence in half there, but if you put a ground
>plane antenna on the top of a 21' pole, you don't have a ground plane
>until you fan out some radial/counterpoise rods/wires. Just being on
>the pole doesn't do it. Also, just being several feet above some
>metal garage roof doesn't do it either. The base of the antenna
>itself should connect directly to the ground plane, which is either
>horizontal or bent down at about 45 degrees.

I was thinking of making an electrical connection between the pole and the carport, so it would be a "sort of" groundplane. It might be better to just mount the mobile antenna ON the carport (if I can swing it).

Hello. I posted to ring and got a couple of replies, but no one ever responded after asking price, etc. The radio is in very good condition, with the manual and box. It always treated me very well, and I ran it mostly ssb 17m, at about 50W. It really is a beautiful radio, and the best I have ever owned. It is problably Kenwood's best ever. Anyway, I need money to buy a mode of transportation (problably a motorcycle, as they are much less costly that cars) and so I have to sell it. I am asking $515.00, and I payed $600.00 for it about 6 months ago. I appreciate your taking the time to read this, as I really need the money. If you decide to purchase this radio, wether it be for beginner, intermediate, or advanced use, I personally gurantee that you will enjoy it to a great extent. Thank you again,
Loren Coty

>without.

You have misunderstood his situation. He is manually transmitting to
a crossband repeater, which he is also receiving the other side on the
other half of his V7A, and because he is hearing the same thing he is
talking about. This is called a feedback. It will produce squeaking
kinda sound. He said "using a cross band repeater" not "using it as a
cross band repeater". There is a difference. Only mobile I know
which has some muting is the Yaesu FT-8100R, which does not completely
mute, only attenuate it quite a bit. The solution is to use a
headphone or make yourself a speaker cut-off circuit when TX is on. I
am trying to build something to that effect on my radios.

My friend has alternator whine on his FT-8500R. By isolating his
radio from touching the body of his car (i.e. no ground looping), the
whine went away, or reduced. He also tried the DC filter from Yaesu,
which didn't work.

Not sure what model you have. Is it the one made for the Icom
IC-2700H dual band mobile? You might need to check what kind of
protocol the infrared outputs. Mine was stolen with the remote head
in my car almost a year ago. They didn't take the radio which was in
the trunk, but took the unconnected CD changer. I think it might be a
lot of work to get the infrared decoded. Good luck.

The difference is IC-2700H can TX the frequency on the main band, onto
the subband when received a remote control command. V7A cannot TX its
voice syntheiszer, it is only for manual usage. So the IC-2700H is
still the only one which you can double check your change of freq.
before you set up cross band repeat.

1927. Kenwood TMV-7A Mod Problem???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-19 00:00:00 UTC
From: Swtempo@worldnet.att.net
Message-ID: <6cgnm0$36a@bgtnsc03.worldnet.att.net>
Source record: 153064

I performed the "beyond mars" mod to my TMV-7A and the radio
still performs like the mod wasn't done.
I have done the full reset to my radio with both the reset button
behind the face plate and by holding MR while turning the radio on.
The radio still operates as though the mod wasn't done. I even took a
magnifying glass and looked closely at where the resistor was removed
to be sure the area was clean and no solder splashed to make a bad
contact somewhere. Everything was very clean and just fine.
Just to be sure, I removed the chip resistor that had the number
"0" right below it. The only other chip that was there had a number
"1" below it. I did not remove that one, just the chip next to the
number "0". The green jumper wires that the Kenwood supplement talked
about are still intact. They were never touched.
I do remember that I did not reset the radio right after
performing the mod, and that I started using the radio and programming
some of the memory features and things like that. After realizing that
the radio would not go below 410 mhz, I did a full reset of the radio
to see if that would make the mod work. It did not. I've tried
resetting the radio many times and still it performs as though the mod
wasn't done.
I don't know what else I can do. I've double checked the work and
reset the radio many times. I even put the chip resistor back into the
radio, did a full reset, programmed some features and used the radio
normally. Then I started all over again and removed the chip and did a
full reset before doing anything else. It still did not work.

>disgrace that we have to pay for. We pay for calls to the Internet in
>England!!!!!!

First of all, you got the name wrong. Packet radio internet gateway
has traditionally been a message/e-mail gateway only. On the packet
radio side it has traditionally been AX.25, and it routes messages
back and forth to the Internet. What you want is a TCP/IP connection
over packet radio. It has been done in various areas.

>PLEASE NOTE:-If you have never heared of an packet radio internet
>gateway, DONT reply to me saying youve never heard of it, and its not
>possible, because I jolly well know it is possible, this would
>obviously be the first time you have heard of it, so DONT bother to
>reply to me. If you DO know what I am talking about, I would very much
>welcome your input.

Well, you don't get to say the term right, so some people might get
confused.

>I need to know what equiptment I will need to do this, the cost, and
>if there are local gateways operating in the MHZ freq. range that will

Again, you didn't get the term right. What you need is a UHF or
higher frequency if you want to operate on amateur radio bands. And
just to be sure, check with your own country's band plan as I am not
familiar with yours.

>be able to cope with a high speed packet radio modem (56K + baud),
>in the NorthWest region of England. From reading stuff off the net it
>wont cost a fortune to implement all this. I apparently need a TNC
>(Terminal Node controller), radio, amplifier, and Antenna, and

There are no off the shelf TNC which will give your 56kbps air speed
(or more). There are packet modems which are in use by various
people, but not with a TNC. An example is the WA4DSY "GRAPES" modem,

to be used by the P.I. synchronous I/O card by the Ottawa group. By the way, speed is measured by bps (bits per second), baud is not used commonly anymore as it refers to the change of phase per second, which does not correspond to the speed issue.

>anything else you might think I should need. Read some info about JNOS
>too, presume its possible to run TCP/IP over that, with WIN95, and all
>the traditional internet application programs running all above that,
>FTP, email, Netscape browser etc etc etc. I hope to run all that
>little lot from a 486AMD5x86-P75 ,256K cache,16MB, WIN95, which will
>more than meet the needs of the Packet radio interface.

Although JNOS might run under Windows, I am not aware of JNOS having a socket link or a network interface presence to Windows (95 or not). In order to use "traditional" internet apps, you need to use a stack which has connection with Windows networking interface. FlexNet is the only software I am aware of which can do that. However, I am not aware of FlexNet supporting the 56kbps GRAPES or any high speed packet modem (yet), although they have a modular design which gives it a future possibility. The only other way to do it, which is the way our club (University of British Columbia Amateur Radio Society) has been doing, is to use Linux operating system, which has AX.25 driver for the P.I. card for the 56k link, and run this computer as a gateway. Then use a Windows computer connecting to this Linux gateway via a network connection (we use 10B2 ethernet). But you didn't mention you have another computer, which this needs. I am not sure how crazy your local packet group is, but it took us a long time and quite some money to build the system we have today. In order to have the connection with the user, (we are only doing a short hop point to point now), we are currently building the 56k as a repeater to be put somewhere high up on mountains. Stilll people with no line of sight to these repeaters will not connect as any reflections will distort the signals badly.

I am not sure if you have your licence yet, but may be that will be a first step. Or may be now you think paying your ISP isn't that bad an idea.

>If you can help would appreciate it

>Cheers

1930. Re: TM-V7A PRO's & CONS

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-19 00:00:00 UTC
From: Tom Nicastri <tnic@IDT.NET>
Message-ID: <6ch2jc$j4m@nnrp3.farm.idt.net>
Source record: 153067

I love the display on the TM-V7. It not a problem for me. Cpa passengers are always commenting on its visibility. The numbers are large and easy to read.

The buttons on the radio are easy to work.

Audio is great on the radio.

Programing is very easy. You dont need a manual to use the radio.
The TM-V7 is easy to use at highway speed. You can control the radio form the mike. I rarely have to reach for the radio. You can control the squelch, volume, pl, reverse, memory, call channel vfo, vfo direct entry and lots more from the mike!

If you listen to aircraft channels the "visual scan" allows you to see activiy on over 147 freqs while you are listening on one.

The Alpha tag memory's allows me to have a huge mumber of repeaters in memory and actually know what repeaer I am on without looking at a piece of paper. I dont see how Icom and Yaesu can keep comming out with radios that dont have memory tags. What good are hundreds of memory's without their names.

You can set 5 pairs of memory ranges you want to scan (such as 146.520 to 146.800) and it will keep looping thru that range.

The radio can tell you if another station is in simplex range.

The voice chip will announce the freq you are on.

I have the radio in the trunk and the remote display up on my console hump. I just take the display with me and hide the mike anddont worry about the rig being stolen.

I used a par notch filter on the radio for Intermod. I had the filters from previous radious - thats how bad the Intermod is around here (1 mile form New York City) All wide receive radios suck on intermod. I have heard plenty of Yaesu owners complain in my area. Get a Notch filter from Par and get any radio you want. Its the price you pay to be able to receive aircraft police, public service, boating freq. etc.

The radio is very reliable. It has massive heat sinks. Its up for a long talk. I dont hear complaints about reliability as I somtimes do with the Yaesus (thats not a Yaesu bash I have owned them - just my impression).

All these radios have loads of bells and whistles. I wanted one that was easy to use and RELIABLE. I found it.
I purchased a second TM-V7 - you can take that as an endorsement.

I've had one for about 1-1/2 yrs. now and have thoroughly enjoyed mine.
One thing I might add, you will want the filters because adjacent strong
signals can make life pretty miserable. I operate mostly cw and have
found the Collins (Yaesu # YF-115C) 500hz to best for that mode, much
better than the ones specified in their operators manual.

Hi,

Well, I've had a FT900CAT for almost 2 years now and I have found it to be one of the best HF Radios on the market today. I also have a FT890, which is basically the same radio, but since I've grown older and my eyesight is not what it used to be, the advantage of the 900 is that the readout and digital meter is easier for me to read. Otherwise, both are the same in every other way.

Great radio! However, if you don't need the detachable face or are not vision impaired, I'd go for the 890.

Good Luck,

If you go to the Alta Vista and look for "waters and stanton" , you will fing the web page of a large British Ham dealer. He has a catagory which says:'late breaking news" .

According to his page the FT-847 should cost around $1700 or so. Not the $2000 you guys have been told by other sources. Perhaps the intro price(rippoff price) to get top $$ from the guys who have to have it first is $200 more?? I used to one of those guys till I found out i could save big $$ by being patient and letting the first guys deal with the bugs and sending the radios back and forth to the manufacturers to get fixed.
Also, the Web page indicates there is a 1.8 MHZ to 440 MHZ antenna for the car that is motorized the Screwdiver type that only works with the FT-847 price $250. No control cable as the signal for directions goes on the outside braid of the COax cable. Very interesting!!
I am not a Dealer but just a guy who likes to Web search for new stuff.

The 16 channels is the standard radio and the 128 channel model is a extra cost item. I Think that it is programed at the factory for the options when a new radio is ordered, Some GE/ Ericsson dealers may be able to change the options but you can't do it with the programing software...Hope This helps Tom

The easy was is to mark the pins you need and cut the rest off. If you
look you will notice that the needed pins are scattered, not all bunched
up. Makes life a lot easier.

I agree that it's a sweet toy...and use it mostly as a small scanner since it covers most of the most listened to parts of the radio spectrum , including with mods, full 800. also am radio (i get at least six stations) TV, FM etc. Only thing lacking scanner-wise is cordless (but who wud listen to that?) the sound quality is strong, very little intermod. you'd pay twice as much for a scanner this size -- the welz1000 or 2000 (made by Standard). Buy one used and it's an even better deal!

1947. Re: Please help. I am getting cordless on 147.060 with HTX-202, HTX-242 and etc.

Thanks very much for the reply. The Red Cross frequencies are all 47MHz
frequencies. The 6m frequencies are repeater pairs up near 51MHz. Still
no output from the 6m channels though! I don't know how wide the radio
tune!

Well it looks as if the 736 will be around for awhile. Yaesu is still
advertising it along with the 847. It supports 222MHZ and 1.2GHZ
whereas the 847 does not.

Kenwood is up to there tricks again. before you go out and buy the V7A
at a discount price, There is already and replacement on its way.
Looks the same but has a different color display. More of a light
yellow with black. Seen the new radio in Staton web sight in UK
Don't know when its coming out but you can bet they will wait till
you go out and buy the old one. Also beware, there closing out the
TM-255 so there must be a new VHF -UHF all mode on it's way.

> Where do you get this free in the US idea?

It's hard to find a major ISP in the States that doesn't support unlimited connect time for a flat rate these days. This includes some of the "big ones" with millions of subscribers. Whether this pricing model is going to be viable in the long run is a matter of some debate, but the trend has been clear for quite awhile now.

Local telephone companies don't care if you camp out on the line 24 hours a day, as long as you pay the US $20/month service charge. (This is true of both basic and ISDN service in my area, although roosting on an ISDN account will quickly send you to the poorhouse in ISP charges.)

It's safe to say that "free" local calls are subsidized by long-distance rates to some extent, although to be honest the average US citizen has little grounds for complaint about high long-distance rates either.

IMHO the U.K. and Europe have always been behind the times in matters technological. Heck, I've been involved with personal-computer software projects that had to support cassette tape drives as late as 1988, just for the European market. Get with the program, you guys! :)

Source record: 152849

FS: HP 8554L spectrum analyzer plugin for use with 141T mainframe (not included), 500 kHz-1250 MHz coverage. This unit works perfectly, but is around 8/10 cosmetically with a few areas of paint rubbed off where old labels were removed.

The 8554L plugin is equivalent to the 8554B, but with frequency coverage extending to 500 kHz instead of 100 kHz for the 8554B. If you're looking for an 8554B and don't need the bottom 400 kHz of calibrated coverage, this would be a good, economical alternative.

Asking $250, seller pays shipping from Austin, TX. .JPG available on request.

I had the same surprise when I upgraded. I ended up with the icom 706 mkII ($1200) for the radio because I like to operate portable. I am very pleased with the radio. It is a huge step up from the Yaesu ft 101 that I started with. For base station use I bought a used 100 ft tower ($200) that I am setting up as two towers, a 40ft and a 60ft. I am currently running dipoles (home made) and a gap vertical, but as I see good used antennas I am buying them. I figure a year from now I will be able to put up the HF yagis...For portable use I have a rotatable dipole (home built), made of copper pipe and stainless steel wire extensions, for 6, 10, 15 M that I set when when I am stationary. It's ugly but it works great. For mobil I am using Hamsticks. Cheap and easy...

I think you will be pleasantly pleased with what you can do with a little money. Don't think you have to spend a fortune to make good contacts.

On the VX-1R you can mask a memory. This will cause the memory to not
appear in the associated band. However, if you use the automatic "next
memory available feature" (just press and hold the Function key and the
next available memory number appears), it will not appear as available!
The only way to truly erase a memory is to use the ADMS software.

Wondering if anyone has operated FT-50 HT along with a laptop and a BP-2 packet modem.
Appears it would make a very nice portable packet setup.
Interested in any experiences with this setup. How you connected the radio and modem, any problems or triumphs.
I don't use packet at home, looking for a setup to operate while on trips.

1973. --- First impression of my new FT-920 ---

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-20 00:00:00 UTC
From: "David Ho (AF4BH/VR2UE)" <davidho@one.net>
Message-ID: <Pine.LNX.3.95.980220131801.26226A-100000@shell.one.net>
Source record: 152897

My FT-920 has finally arrived yesterday. I think that it might be informative to some people who, with the tax refund, are considering this radio as their next major purchase.

It's been over 12 years since my last excitment of opening the box of a brand new radio. My last HF rig was the IC-751A and I sold it due to schooling and things. Nevertheless, I've been using my R-71A in these years to keep up with my SWL hobby. Now I am in the process of rebuilding my station: my Carolina Windom 40 and the MFJ Versa Tuner III are making their way thru the UPS pile. Meanwhile, I can only use a random wire to do some SW listening.

My observations can only be limited to general, not very serious, RX, appearence, and control areas.

There is a video tape came within the YAESU carton box. Texas Towers gave me an extra one along with their own packaging. I thought at first these were some fast track video tapes to guide me thru the menu items, safety, and operational concerns. But they turned out to be identical and more like promotional/commercial/infomercial video.

The little box that held the hand mic seemed to have botched up by some heavy object. The stocked hand mic inside had a very bad scrach on the back side. Apparently, that was done by the "O" ring of the mic jack because it had been compress and now was an "Oval" ring.

I couldn't find any dent on the box, nor on the rig. The mic box seemed to have a lot of room to slide around inside the package. I couldn't figure out how in the world it could have gotten compressed so badly from within. Unless it was already like that when they put together the box before shipping. I was a little upset, but I thought I could live with the scratch and could replace the "O" ring eventually. I tested it and it seemed to work OK. I like to have a desk mic in the future anyway.

I hooked it up to my power supply and the rig came up. What can I say? It looked wonderfully as it was advertised.

My first impression of the receiver was very good (A to A+). Signal popped right out. It seemed to me the FT-920 had a much, much quieter receiver than my old IC-751A. Of course, I don't have the FT-1000 or IC-775DSP to do A/B comparisons with. The DSP helps BIG TIME to assist the IF shift to fight QRM. Actually, it helps to reduce the "Boommy" AM sounds, too! Noise Reduction (NR) is very effective, which can cut out white noise with very little distored SSB audio. I use the MFJ DSP with my R-71A and I hate that "echoing" sound. The NR of FT-920 doesn't exhibit that characteristic much at all, except when monitoring AM

signals. NR on SSB, in addition, does present a reduction on SSB audio level. But this can easily be compensated by increasing the AF gain. Sort of like increasing the RF gain. But FT-920's NR seems to help increase the S/N ratio, while RF gain is weaker in this round up. Since RF gain is just a totally different animal as oppose to DSP NR.

I was thrilled when the heterodyne was completely wiped out by the DSP when I listened to my favorite station "Voice of Free China" on 5950 khz! That's unheard of on my R-71A. Notch filter can only do so much, but the DSP can actually make the AM sound so much batter! The MFJ DSP can only eat dust in this round.

About the Notch filter. FT-920 doesn't provide a manual notch control and it is done via DSP and is fully automatic. Yes! It is very, very effective, narrow, and sharp, too! At this point, I don't see the need of having a manual notch control for me anymore. After all these years with a manual notch control which can only do one tone at a time, you'll know what I really mean.

FM is *&^%$ optional! I still can't believe why YAESU has to do that to us. We are talking a "MODE", not a "FILTER" here. I can see an optional 6M band, but gimme a break, please.

The menu is extensive, but I find that hard to use without a cheat sheet. A card or something like that will be a great help for someone forgetful like me. Menu prompts are somewhat helpful, but means Greek if you haven't read and remember this part of the operating manual. Set-and-forget are not very true to me since I like to tinker around with options of my radio.

I am a Coder but the electronic keyer is USELESS to me because it doesn't support MODE A keying. (May it be me who just don't know how to set it up right?) I hate to relearn how to key "A" and "N" because they turn into "R" and "K" respectively in MODE B. It might be fun for you who are MODE B operators. But it is the biggest boo I'll have for my radio. If you know how to turn the FT-920 to support MODE A keying, please let me know. I'll pay you $10 dollars as a personal way to say "Thanks". Staight Key is much easier to live with than MODE B to me. Otherwise, the electronic keyer and the contest settings are just good and extensive. Luckily enough, I have a MFJ Super Keyer on my shelf. Hopefully, I can use that rather than relying on the rig's keyer itself. I'll give that a try once my Windom is put up. But it's still aggravates me very bad.

Really: Are there more Mode B operators out there than Mode A operators? Is it just me in the whole world a Mode A coder?

I find that the "SPOT" tone feature is of less useful; however, YAESU has made it a pretty big feature to be advertised. Once I have the narrow filter, my ears can do a better job than the "Enhanced Tuning Indicator".

It's hard to believe not having a CW narrow filter if you plan on using CW mode like me. Ah! An external keyer is a must if you are a Mode A coder. This keyer thing just annoyes me to no end.

Since the "Enhanced Tuning Indicator" serves mutiple purposes, it will be nice to be toggled via a button rather than via the menu. I thought the [DISPLAY] button will include such function, but I was dead wrong.

Operating Manual has some errors in it and I managed to isolate them. My hats off to WM7D's informative web-page.

The well know NB mod was done before it was shipped to me. I am glad that I have waited.

It's hard to believe not having a CW narrow filter if you plan on using CW mode like me. Ah! An external keyer is a must if you are a Mode A coder. This keyer thing just annoyes me to no end.

I think that this radio is worth the money in it's class. How I wish to have an MP instead! Only if I were rich. Newer radios always pop out here and there, now and then. But for what I can affort and the wait for over the years, the FT-920 will probably lasts me for a while before I look into a replacement.

Thanks for your reading and time.

Best 73!

Will White wrote:
>
> Is this true? Is it enforceable?

Yes, it is:

United States Code Title 47 section 227 (a)(2) defines:

The term "telephone facsimile machine" means equipment which has the capacity (A) to transcribe text or images, or both, from paper into an electronic signal and to transmit that signal over a regular telephone line, or (B) to transcribe text or images (or both) from an electronic signal received over a regular telephone line onto paper.

USC 47 227 (a)(3) defines:

The term "telephone solicitation" means the initiation of a telephone call or message for the purpose of encouraging the purchase or rental of, or investment in, property, goods, or services, which is transmitted to any person, but such term does not include a call or message (A) to any person with that person's prior express invitation or permission, (B) to any person with whom the caller has an established business relationship, or (C) by a tax exempt nonprofit organization.

USC 47 227 (a)(4) defines:

The term "unsolicited advertisement" means any material advertising the commercial availability or quality of any property, goods, or services which is transmitted to any person without that person's prior express invitation or permission.

USC 47 227 (d)(1)(B) makes it unlawful:

"to use a computer or other electronic device to send any message via a telephone facsimile machine unless such person clearly marks, in a margin at the top or bottom of each transmitted page of the message or on the first page of the transmission, the date and time it is sent and an identification of the business, other entity, or individual sending

the message and the telephone number of the sending machine or of such business, other entity, or individual."

USC 47 sec 227 (b)(1)(C) makes it unlawful:

"to use any telephone facsimile machine, computer, or other device to send an unsolicited advertisement to a telephone facsimile machine.☐

USC 47 sec 227 (c)(5) also states:

"A person who has received more than one telephone call within any 12-month period by or on behalf of the same entity in violation of the regulations prescribed under this subsection may, if otherwise permitted by the laws or rules of court of a State bring in an appropriate court of that State:

(A) an action based on a violation of the regulations prescribed under this subsection to enjoin such violation,

(B) an action to recover for actual monetary loss from such a violation, or to receive up to $500 in damages for each such violation, whichever is greater, or

(C) both such actions. It shall be an affirmative defense in any action brought under this paragraph that the defendant has established and implemented, with due care, reasonable practices and procedures to effectively prevent telephone solicitations in violation of the regulations prescribed under this subsection.

If the court finds that the defendant willfully or knowingly violated the regulations prescribed under this subsection, the court may, in its discretion, increase the amount of the award to an mount equal to not more than 3 times the amount available under subparagraph (B) of this paragraph."

BTW, in the case of Destination Ventures vs. FCC (46 F.3d 54, 1995), the 9th Circuit Court upheld the legal ban on unsolicited fax advertisements as constitutional, as it unfairly shifts costs to the recipient.

Every day, people are suing the spammers -- and winning. But the real trick is to go after the ISP's. They always have a clause in their client agreements which forbids sending unsolicited Email. You don't have to stop the spammers, the ISP's will. If they don't, they're also liable.

Check out the "Blacklist of Internet Advertisers" at:

http://www.cco.caltech.edu/~cbrown/BL/

Have a great day!

My original cost from AES was: $1306. You can check their web page, or HRO's web page, for today's current pricing verification.

I'm selling the following COMPLETE PACKAGE, which includes UPS ground shipping, all for only: $1000.

The radio is only 9 months old and is still under the one year factory warranty. For more information you can contact me, Tom NE7X, at: NE7X@amsat.org

The package includes:

Alinco DX70-TH transceiver, 160-6m, SSB.FM.AM.CW, 100 watts
Mobile Mic
User Manual
500 Hz CW filter (installed)
Mobile Bracket
Original box

Also included is:

EDX-1 External matching manual antenna tuner with PWR/SWR meter
Original box and user manual (This is a $275 value)
EDS-4 Front panel remote control cable
EBC-8 Front panel remote mounting bracket
EDS-5 Mic extension cable

Free UPS ground shipping included for lower 48 US states.

For more information about the Alinco DX70TH transceiver, visit the Alinco WEB page at: http://www.alinco.com/Products/DX-70T.shtml

Date: 1998-02-20 00:00:00 UTC
From: "Mark L. Payne" <mpayne@gte.net>
Message-ID: <6ckqbvbod1@gte1.gte.net>
Source record: 152907

Anyone know how to install a lithum battery in a Kenwood TM 241? The display is doing crazy things and I think it might be the battery.
Thanks Mark

1984. MARS/All-Band Mod for Icom IC-707?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-20 00:00:00 UTC
From: DavidC <davidc@bit-net.com>
Message-ID: <01bd3e25$1b303c60$108a92d0@davidc.bit-net.com>
Source record: 152908

I have searched everywhere I could think of before posting this request
(including several on-line mod sites and the QRZ listing of what is on
their mods CD), nothing found.
Anyone have, or know for certain where I can find the MARS/All-Band
transmit mod for the Icom IC-707 HF rig?

Source record: 152910

The TS-510 is the predecessor to the TS-511 and was marketed in Japan and the US in the late 1960s and early 1970s. Allied Radio used to market it for Trio/Kenwood. The TS-511 made its first showing about 1971.

1989. Help: converting Mocom 70 to repeater

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-20 00:00:00 UTC
From: janran@pathcom.com
Message-ID: <janran-2002981603130001@ts25l7.pathcom.com>
Source record: 152913

Hello
I am trying perhaps am imposible project. I'm trying to convert a Motorola Mocom 70 to a mobile repeater for the Fire Department I work for.
The input and output frequencies are approx. 8 mhz apart.
I have managed to get the receiver and Transmitter operating separately.
I have also managed, although not perfectly, to couple the audio from the receiver to the transmitter, but I believe I need a matching network to provide the proper impedance between the two stages.
I also need to build a COR circuit
I need help from anyone that can help me to finish this project with any ideas you might have for matching circuits and COR circuits and where to properly place them.
Any helpful comments are welcome.
Thanks for taking the time to read this.

1990. help need with radio technical data.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-20 00:00:00 UTC
From: neil <neil@aade.com>
Message-ID: <34EDF810.4102@aade.com>
Source record: 152914

DFD3 is a new digital frequency display to update boatanchors
to digital frequency readout.

DFD3 can autoprogram itself for over 100 radios, (at least as
soon as I am able to gather enough information)

I need help with data about some radios. The necessary info is:
1) number of bandswitch positions. (ie: 5)
2) crystal frequency for each band (and harmonic used if > 1).
some radios have auxillary band positions which did not include
crystals stock from the factory. Indicate these as "NONE" or zero.
3) for each band the lower band limit and upper band limit (ie: 3.5-4
MHz)
4) the VFO lower and upper tuning range (ie: 5-5.5 Mhz)
5) the tunable IF range (may not be the same for all bands) (ie: 3-4
MHz)
6) the second IF frequency (ie: 455KHz etc.)
7) the BFO crystal frequencies for CW, LSB and USB if any.(ie: 453.5,
456.5 KHz)

This could be in the form of a block diagram with all frequencies
marked on it or in tabular form.

If you are the one to supply this data for a radio and later purchase
a DFD3 I will throw in a backlit display upgrade free ($10 value)

If you are in a position to supply data for 10 or more of these radios
I will give you a DFD3 free.

If you have any of the following radios or manuals I could really use
your help.

Anyone using the subject headphones? If so, do these headphones qualify as so called "communications headphones" from a frequency response standpoint, or might they be higher fidelity? If anyone has specs, what is the claimed frequency response? Are they comfortable for extended wearing? Is the lack of any padding over the metal headband hard on the noggin? Any other comments would be appreciated as well.

Keith Little (little@galileo.galilei.com) wrote:
: Every day, people are suing the spammers -- and winning. But the real
: trick is to go after the ISP's. They always have a clause in their
: client agreements which forbids sending unsolicited Email. You don't
: have to stop the spammers, the ISP's will. If they don't, they're also
: liable.

Don't be so quick to go after the ISP's. One of my clients is an isp
located in the boston area. they have had to waste hundreds of man
hours going after spammers in the past 6 months and they, like all ISPs,
are loosing the battle.

why is this so? Two reasons; both based on different failings of the
current email infrastructure. first is the cost of email put on the
recipent. second is that email filtering is trivial to bypass.

the only solution to spam is to push the cost of email back onto the
sender. yup, this means postage. fortunately, using financial
cryptography, is possible to issue postage without needing a central
authority. It is also possible to issue different classes of
postage for friends and mailing lists vrs strangers.

one slick things about self issued postage is that you get to collect
the money. one of the bummers about self issued postage is that
others will want to get a cut of that money. I can see a future where
mail servers bid to carry your mail for a fee or percentage and you
get to choose one based on price and quality of service.

Source record: 152921

I have a mint-condition Kenwood TS-520S transceiver for sale. This is an excellent HF transceiver for a new ham or someone who likes units with tube finals. 100W output. It doesn't tune the WARC bands. Excellent receiver section. Very lightly used and carefully stored for the last ten years. I just fired it up and it works perfectly. Not a scratch or ding. Impeccable build quality. It includes:

Kenwood MC-50 matching microphone
Kenwood SP-50 factory speaker
Operator's manual
Factory service manual
Original double-box shipping carton

I'll also throw in a very nice manual telegraph key...a New Viking that weighs over a pound and isolates all the current-carrying parts in the base. The best feel of any key I've ever used.

I'm asking $350+shipping but will entertain any reasonable offers. I'm in the Seattle area.

Please get with me via email if you are interested. Thanks,

- Mark (N9AFL, markjenn@halcyon.com)

However,

The Index Plus QRP rig is now being built by SGC. It has undergone
a few changes in the process including a new model number SGC-2020.

Try http://www.sgcworld.com or call 1-800-259-7331 for info.
I do not have any affiliation with SGC.

Date: 1998-02-20 00:00:00 UTC
From: "Mark S. Jennings" <markjenn@halcyon.com>
Message-ID: <6cl36e$69u$1@brokaw.wa.com>
Source record: 152924

I bought this unit new in 1979 and used it extensively for a year, then packed it away. Here are the specs:

80 watts output (on 5-15 watts input)
144-148 MHz
FM, SSB, and CW
10 dB receive preamp
Requires 13.6 VDC at 10-12 amps (great for a mobile)
5-3/8 inch x 3 inch x 8 inch
3-lb weight

It is in "as new" condition, but electically and cosmetically. I have the original "owners manual" (four pages of typewritten paper and a schematic).

I'm asking $100. I'm in the Seattle area. Please email if interested.

- Mark (N9AFL, markjenn@halcyon.com)

It is probably not the battery. The display connector has broken loose
and needs resoldering. Common problem. If the battery goes out every
time you turn on the radio it will be on 144.000 mHz.

In <34ea5abd.8008820@scan.missouri.org> printer@cheerful.com writes:

>Would someone please compare the Kenwoods ts-440s/at and the ts-570D -

I had used a 570 with a friend for a few hours. I have owned a 440 for some years. Didn't have them side by side, that would be best.

On pure design principles, notice that the 570 is a "500" class Kenwood transceiver. Like the 520 and 530. These are good basic radios, but basically single conversion as far as IF filter choices, you get one filter in one IF, no cascading and its corresponding advantages in some specs.

The 440 has a filter in each of two IF's. That is a good thing. If you replace the pair with aftermarket IRCI filters, you can get very, very nice selectivity. The 570 will allow you one IF filter, and you can get a good IRCI filter for that, then you get the advantage of some pretty nice AF DSP. Now, I find that outboard DSP works as well as the DSP in the 570 in general, so you could add it to the 440.

Overall, for most use, the 570 is probably better as it is newer, has nice features, is small, etc. For some situations, you can increase your selectivity with the 440, but you suffer with the size and the age of the rig.

For the same money, I might choose the 570 except that I have some experience inside the 440, so small problems don't bother me. I also just love the rig with good filters in it. Just put some TS 940 filters in mine, and the audio is superb as well as giving good selectivity. Nice radio.

Good luck. If you are new, go with the newer rig, it will probably give you less trouble and you won't need the small extra selectivity anyway.

Gary,

That's an interesting point. If the UT-106 doesn't do what a Timewave can do with its steep skirts, why bother? All it is then is an ANF. Will true DSP (IF level) be offered in the upcoming IC-746?

You ain't kidding! I'll get in line sometime late in the Summer (after
it is debugged) if the price is $1700.

I vote for the entry level Yazu FT-840, about $850 with careful shopping on the 800'phone lines. It'll be new, warranted, and a decent piece of gear.

Congtatulations on the upgrade!

With eight different HF bands, each with their own propogation charachteristics and more importantly, antenna requirements, I recommend you decide which bands you are going to work / what type (ie. ragchew, DX, day/night etc.)

In the HF world you will quickly learn, "the antenna is the station"

Get something that will give you general coverage receive and only worry about the bands you plan to TX on. Save your $$$$ for a good antenna! Then upgrade rig to the latest features after you understand the basics.

2023. Clipperton-L arcing band switch

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-20 00:00:00 UTC
From: k4rg@aol.com
Message-ID: <19980220030501.WAA21520@ladder02.news.aol.com>
Source record: 153010

I have a Clipperton-L amp that I bought used. It has the 10 meter mod and the tuned input circuit. It started arcing on the last wafer of the band switch between the 160 meter and 10 meter positions. It started doing this on an 80 meter antenna that was tunned with a tuner. I stopped using it on 80 and it worked ok on 20 meters. I tried it on 40 and it started arcing. I have stopped using it and have inspected the damage. I cannot see any burned components except a couple of disk capacitors on the power supply board. If you have any ideas I would appreciate hearing from you.
Thanks, Bob K4RG

2025. For Sale: GE Mast II

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-20 00:00:00 UTC
From: Big_Red_One@Juno.com
Message-ID: <34ecd509.28988173@news.bright.net>
Source record: 153012
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,oh.forsale,us.forsale.misc,us.forsale.d,misc.misc,us.misc

For Sale

GE Master II radios 144 to 160 Mhz.

Some have PL encode/decode 100.0/146.2

50 Watt transmit .5 uv or better receive. (ALL WILL BE CHECKED BEFORE

THEY LEAVE HERE THERE WILL BE NO DUDS).

Some may come tuned in the ham band as I have done this to a few to make

shure they work well there.

Currently on Goverment frequencies but tune to 2 meter ham verry easy.

Each package contains:

One radio.

One control cable.

One control head 8 channel.

One microphone.

One speaker.

One transmit/One recive ICOM without crystals.

One PL incode/decode board and hook switch as available.

If you buy 5 or more (limit 25 as that is all I have) you

will receive a compleat service manual.

The cost is 75 dollars plus shipping FIRM!

Crystals can be installed for one frequency tx/rx for 40 dollars.

You are responsible for any additional ICOMs and crystals as there

are not enough to do more. If you order the one channel installed

you must wait 4 to 6 weeks for me to order the crystals from my supplier

and them to ship them to me. The time can be shorter but the

supplier raises the price to me and I to you.

If you want to order your own crystals and install them your self

you can order them for 10 dollars each (20 dollars a pair 1 tx / 1 rx)

from:

Hy-Q International

1438 Cox Ave.

Erlanger KY. 41018

606-283-5000

COD or money orders only no credit.

DO NOT buy JAN or BOMAR crystals as they are shipped off frequency

and usualy fail within 6 months.

Any repeater mods you want are up to you to do.

All orders and shipping are to be handled through Rich KA8CMK at Big_Red_One@Juno.com

way he want's to do it.

Thank you for your time

Wayne L. Anderson

2026. Kenwood TMV-7A Mod Problem???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-20 00:00:00 UTC
From: Swtempo@worldnet.att.net
Message-ID: <6cj0h1$o42@bgtnsc02.worldnet.att.net>
Source record: 153013

I performed the "beyond mars" mod to my TMV-7A and the radio
still performs like the mod wasn't done.
I have done the full reset to my radio with both the reset button
behind the face plate and by holding MR while turning the radio on.
The radio still operates as though the mod wasn't done. I even took a
magnifying glass and looked closely at where the resistor was removed
to be sure the area was clean and no solder splashed to make a bad
contact somewhere. Everything was very clean and just fine.
Just to be sure, I removed the chip resistor that had the number
"0" right below it. The only other chip that was there had a number
"1" below it. I did not remove that one, just the chip next to the
number "0". The green jumper wires that the Kenwood supplement talked
about are still intact. They were never touched.
I do remember that I did not reset the radio right after
performing the mod, and that I started using the radio and programming
some of the memory features and things like that. After realizing that
the radio would not go below 410 mhz, I did a full reset of the radio
to see if that would make the mod work. It did not. I've tried
resetting the radio many times and still it performs as though the mod
wasn't done.
I don't know what else I can do. I've double checked the work and
reset the radio many times. I even put the chip resistor back into the
radio, did a full reset, programmed some features and used the radio
normally. Then I started all over again and removed the chip and did a
full reset before doing anything else. It still did not work.

I asked for comments on the Skywalker Amps from RF Electronics (the 1st site). I have never seen them in the swap pages which means that either no one uses them or no one wants to part with them.
I got about five responses; all of them pointing to the second issue. Those who have them -- like them a lot. They seem to be great mobile amps.

My TS-520 puts out 200 watts by itself, so 500 watts didn't make sense.

Plus all that the prices quoted are for the circuit boards and components. Cases, meters, fans, heat sinks, etc -- all cost extra. To get everything for the 500 watt model, as a kit, was about $470.
Once you get it all put together, it takes a power supply to run it. The 500 watt model required an Astron AS-70 or equivilant for high amperage peaks. the 1000 watter took a pair of them in parallel.
So add the price of the power supply ($240+ from AES).

Now the 500 watt model runs about $700 as a kit.

From what I hear, they are good products; just too much money for too little gain. I'd have to tune my TS-520 way back to keep from over driving it.
Now for a ham running a Scout mobile -- a good amp.

Perspective is everything.

Tony -- WD6AXL

Hello Bob, the problem is that the person who posted the query in the UK. Internet Gateways (and phone patches) are ILLEGAL under the UK license conditions, and with a few rare exceptions the UK packet network still mainly runs at 1200, with occasional 9600 ports, plus the odd once-in-a blue-moon high speed microwave band port. The information that he has been given is correct, specifically for the UK.

Regards, Graham Galbraith M0ADR

The only way to really find out is to go to Japan and get
an unmarked van. Hide outside the R and D part of Yaesu/Icom/Kenwood.
Then we have to abduct one of the Engineers just like in the movies and

take him to an abandoned warehouse to interigate him. Of course we'll let him go after he tells us about the Next Year models he is working on. Hee hee

Hallo to everyone!

Really I need a satellite tracker hardware,AEA ST-1 SATELLITE
TRACKER might be a good choice,but unfortunately I hear that this
company is closed,
so I hope you give me some advises in purchasing such hardware
or any other
hardware that can also track the satellites.

Thank you very much!!!!

Would like to build a 50 ohm dummy load - the kind that is made from a gallon paint can, some transformer oil and a resistor.

Problem is, I don't have a clue what kind of resistor would be appropriate.

I need something that can handle up to 1 kw for maybe 30 seconds at a time.

I see MFJ sells a kit with everything but the oil - will I be better off buying from them or can I make one myself for less?

Thanks

2046. Questions about Field Strength

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-20 00:00:00 UTC
From: Tim Havens <thavens@hps-inc.com>
Message-ID: <6ck88anpm1@usenet53.supernews.com>
Source record: 153033

A friend of mine owns a mountian which he lives atop. He leases space to a cellular phone company for a tower site. He has concerns about knowing when and
if the phone company changes the output power on the system. They are getting
ready to change out the antenna systems on the tower site, and he wants to measure the the output power, prior to to the installation of the new antennas. To
see if his exposure to the system has increased.

I worked for the this phone company, and this is how I met the gentleman; however,
I have moved from that area now, and no longer have equipment to measure field
strength.

Can anyone suggest an inexpensive way to do this? I think he said he had a field
strength meter already but that is was broad banded, something like 30Mhz to 2ghz.
I suggested connecting a 870Mhz Cellular antenna to it, and getting a set of notch
filters to cancel everything else out.

One of my concerns with this method is that since he lives atop a 3000' mountain the
device he is using to measure may be picking up signals from all around. So...we want to
find a way to be as acurate as possible.

I don't own any radios that have cellular freq cababilities, if I did, I would just use that,
with an attenuator in line, and that would be a good way to measure it. This needs to
be something that can be repeated, and won't require a lot of calibration ;-) The systems
ERP when all 10 voice channels, and the control channel are keyed is around 495 watts.
Not like the 6 tenths of a watt a hand held phone puts out or even the 3 watts phones.
495 watts is significant to wonder about we think.

So, prolonged exposure to this may actually be a legitimate concern. The antennas are
directional, and are pointed away from his home; however, we are still concerned.

He lives in NORTHERN New Hampshire, about 25 north of Franconia Notch. If there are
any hams in that area with cellular capable rigs please email me. Barring that, if you have any
ideas on how to construct something to do this, PLEASE email me as well.

Your help is GREATLY appreciated.

2049. Kenwood TMV-7A Mod Problem???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-20 00:00:00 UTC
From: Swtempo@worldnet.att.net
Message-ID: <6ck9s5$81e@bgtnsc02.worldnet.att.net>
Source record: 153036

I performed the "beyond mars" mod to my TMV-7A and the radio still performs like the mod wasn't done.
I have done the full reset to my radio with both the reset button behind the face plate and by holding MR while turning the radio on. The radio still operates as though the mod wasn't done. I even took a magnifying glass and looked closely at where the resistor was removed to be sure the area was clean and no solder splashed to make a bad contact somewhere. Everything was very clean and just fine.
Just to be sure, I removed the chip resistor that had the number "0" right below it. The only other chip that was there had a number "1" below it. I did not remove that one, just the chip next to the number "0". The green jumper wires that the Kenwood supplement talked about are still intact. They were never touched.
I do remember that I did not reset the radio right after performing the mod, and that I started using the radio and programming some of the memory features and things like that. After realizing that the radio would not go below 410 mhz, I did a full reset of the radio to see if that would make the mod work. It did not. I've tried resetting the radio many times and still it performs as though the mod wasn't done.
I don't know what else I can do. I've double checked the work and reset the radio many times. I even put the chip resistor back into the radio, did a full reset, programmed some features and used the radio normally. Then I started all over again and removed the chip and did a full reset before doing anything else. It still did not work.

2050. HELP.Do I get a Shortwave receiver or a Transceiver?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-20 00:00:00 UTC
From: FranJ <maverick@trekker.demon.co.uk>
Message-ID: <dqW6SGAJKb70EwBm@trekker.demon.co.uk>
Source record: 153037

Please forgive me if this is the wrong group. But need advice.
I'm presently studying for the RSGB Amateur Radio License including trying to learn Morse. I want to get involved now by listening in, but I have a dilemma. Do I buy a Shortwave receiver now, then in May when I pass my exam (Trying to be positive!), buy a transceiver OR Just buy a transceiver now, and not use the transmitting functions?!! Somebody suggested the Kenwood TS440s, I have no idea what a good Shortwave receiver is. Other people have advised to go to a club for advice, but presently I'm laid up with a slipped disc. So my computer and the phone are my only way of communicating with the world.

Hope somebody can help, my budget is about ï¿½600 in total
Thanks
Franki:-)

>Does anyone know what this upgrade will cost?
>73 de Eric KB9QAI

I called Icom and the DSP announcement was official on Jan 23. Apparently they will be offering the free DSP for radio's purchased up to 2 weeks before that date. The best I could get was a $20 coupon towards DSP. I guess I can't complain since I didn't even know DSP would be an option when I got my radio; it's just kind of ironic since my wife bought it for me for Christmas on Dec 23, approximately a month before I had planned on buying it. Suggested retail is $169. Since I am new to all this could someone with more experience tell me if I will still want mechanical filters for DXing or will DSP eliminate my need for those?

>through the
>memories or using dual watch.

Yes, I forgot about this problem. In my case it affects the FM
broadcast band. The squelch is too tight on AUTO when using the
standard whip antenna. The squelch seems to behave normally if the
handie is attached to a bigger external antenna.

In article <34ECBFE2.34@ix.netcom.com>, hershman
<hershman@ix.netcom.com> writes
>If you look at the British Prices Including VAT tax they are very close
>to Usa Dollars. For instance, If a radio sells for $1700 British Pounds
>including VAT Tax then it will sell for close to $1700 USA Dollars.
>Basically, the British pay more for their radios than we do, but you
>will
>see that my simple formula works for most of the radios for sale in the
>UK. Yes there are a few exceptions.

This is broadly correct. We *do* pay more for our radios. For instance
the Kantronics KPC3 sells for around ukp 140 whereas you can probably
buy it in the USA for around US$ 110.

>Eagle Sidewinder 400:

How much of the 10 Meter band does it cover with the jumper in the stock position?
Somewhere I saw 28.315-28.755 or something, right? Sort of odd if it doesn't go higher. FM section is much higher in the band. Hmmm...

What is the total frequency coverage with the jumper moved?
26-30? Any chance of 12M?

Also, is there anyway to reach the "a" channels that are skipped in the 10M band?
I would guess 28.345, 28.395, etc.

I ordered one, but am trying to figure out all the logistics. I intend on using it on 10M, the Novice/Tech+ voice section 28.3-28.5.

It appears that with the jumper moved it has "bands"? Could someone explain!

The Copper site and catalog do a fairly poor job of explaining exactly what this thing does, but for $149, I guess I shouldn't complain.

The output is a bit low for 10M. What will the "tune-up" give you for output on SSB?

Please reply to my e-mail as I have spotty usenet access.

Thanks & 73
de Xopher

Hello...

I have for sale the following items:

Kenwood TS-850SAT
YG-455C-1/CN-1 CW Crystal Filter
YK-88C-1 CW Crystal Filter
YK-88SN-1 SSB Narrow Filter
Matching Kenwood PS-52 heavy duty DC power supply
Matching Kenwood SP-31 speaker
Kenwood TS-850 series Computer control interface IF-232C
Kenwood microphone MC-60 with heil element
(All in superb condition with original boxes, all manuals(except microphone)
and necessary hookup wiring)
$1650.00 for the entire 850 package as listed.

Also available:

AEA DSP-232 Multi-Mode TNC with all manuals and hookup cables. Perfect
condition and currently wired for FSK with Kenwood series HF transceivers.
$275.00

Nye-Viking Model MB II 2KW 10-160 meter antenna impedance matching network
with manual. Excellent condition.
$250.00

Swan model WM-2000A Peak Reading high power Watt and SWR meter. Hard to
find and in mint condition. (no manual)
$150.00

Box of miscellaneous equipment including a military grade 50 Ohm dummy load,
Electovoice microphone model 638 with stand (needs wiring), numerous coax
hook-up cables, etc....a purchase worth every bit of $100.00 for all.

Purchase above separately for prices indicated or everything listed here as
a total station package deal for $2150.00 for a savings of $275.00

I will cover all shipping costs.

Take it from someone with 20+ years of experience on lowband
commerical (48Mhz) and 6 FM....go GE, split site WITH the NB
turned on and set to 50.00000
MICOR RCVRS SUCK on 6....I had a fleet of 200+ mobiles and 15 base
stations...all but two of the bases were MICOR...BUT all but 26
of the mobiles were GEs (corporate bought the bases...our division
bought the mobiles!).....The MICORs were junk in my PROFESSIONAL
opinion....the GE MSTR II and EXEC IIs are much better...
The Extender on a MICOR (the NB) trashes the main channel at odd
times with NO reason to do so....possible low level oscillations..
AND you CANNOT use a NB in a single site duplexed rptr on 6...
and in DRY days or wet rainy nights, you can appreciate a NB...
can improve effective sens by as much as 20db!

I have a RC 850 in service...also own two RLC3s from LinkComm...
they emulate the 850 real easily....

I HIGHLY suggest the LINK series....What does your 850 do currently
and what version software do you run? (3* if you are using default
codes)....Also there is an ACC remailer if you wish to join

Go to http://www.link-comm.com and click on the link to the
ACC remailer....and also the LinkCom remailer as well!

You have the correct point.....you COULD FM the TX and then run
"flat" audio without pre & de-emphasis thru the system (it will
pass PL tones then!)....but your controller would require mods
to sounds right on the air...
The usual de-emphasis ckt I use is a 6.8K in series and a .2uf to
gnd....then to the controller input (but then I use the LINKCOM series
and dont have to use external de-emphasis...442.0 near BTR is
a RLC 3 and MSTR II I built for them)

I have a near perfect TS-940S/AT for sale. Includes hand mic, manuals &
original boxes (inner & outer). Also included is the SP-940 Speaker, And
PC-1A Phone Patch. This radio is a 9.8 on appearance and 10 on performance.
I've got 'new radio' fever but I don't 'HAVE' to sell this radio so PLEASE
don't waste either of our time with low-ball offers. $1350 (and worth it!).
Prefer local sale so I can demo the radio but will ship at your expense.

>Packet radio interface.

First, all the packet gateways I know about are Amateur Radio packet
gateways, so to gain access, you will need an Amateur Radio license.
Second, not all the traffic carried on the Internet is permissible under
an Amateur Radio license in many countries, including, I think, the UK.

A group of BC Amateurs has designed and built a 56 K radio/modem currently
used to connect a number of sites together, including a link to the
Internet. I understand they're presently designing a new one that will
basically have two connections plus power - an ethernet connector and an
antenna connection.

They're presently using the 430-440 MHz band with about 85-100 KHz
bandwidth, although the goal down the road is to go up in frequency to

just under 6 GHz so that the bandwidth for a T1 connection will be available.

So, in conclusion, if I were you, I'd find a knowledgable person at the RSGB who can tell you what is possible under UK rules. They would also be able to steer you to active packet people in the UK.

73, Bob, VE7HS

Hi, "newbie" --

It sounds like you may be new to the "newsgroup thing," and aren't yet conversant with the subject of spambots. Spambots are automated newsgroup posters which place messages such as the ones you've replied to on literally tens of thousands of newsgroups, without any intervention or supervision from the people responsible for the spam.

Replying to spam messages in newsgroups does nothing but compound the waste of bandwidth and server space caused by the spam in the first place. The originators of the spam do not look in the thousands of individual newsgroups for any replies to their spam, and will thus never see your indignant reply... but the rest of us have no choice.

Further, many of us use news servers such as Super Zippo (http://www.zippo.com) which implement automatic spam filtering based on a wide variety of criteria. The idea to keep messages with subject lines or contents like "MAKE MONEY FA$T", and so on from ever appearing in their customers' view of the newsgroups. This technology works very well, and is a major selling point for the news services that offer it. Unfortunately, when someone like yourself replies to a spam post that is visible on *your* news server, your reply has the effect of making the spam visible to the rest of us for the first time -- effectively generating spam we otherwise would never have seen in the first place. This happens because many of the common spam filters don't reject replies, only original messages.

So in short, please knock off the replies to spammers. Your audience for such replies is limited to everybody in the world *except* the spammers themselves, and believe me, everybody else already agrees with you.

>selectivity. Nice radio.
Surely with the 570 you can also dial-up 'superb' audio due to tailoring it with the DSP and possibly a heil insert:-)
Now I wonder who'll be the first to bring out a truly mobile HF set with real IF DSP!

Hey, way to go! Congrats on the upgrade.

There are two suggestions I would tender for your
consideration.

1. You can get a new FT-900CAT for around eleven hundred
bucks. This is a very nice rig. With the matching power
supply, it makes a very snappy base station, and the bonus
is that it is small and portable too. I own the 900 and
really like it.

2. I have seen used TS850 rigs for a grand. Now, I own one
of these radios, and if you can get a used one that is clean
(they are around) you will love it. It is a first-class
radio, really essentially as good as the 4 grand rigs for
most hams. And even though it will be out of warranty, you
can still get Kenwood to fix it if it breaks, and typically
the cost is not great. Usually when rigs have a significant
parts failure it is after the rig is out of warranty anyway.

As far as antennas go, I use wire antennas, costs about ten
bucks. Used beams are around for a song.

Have fun on HF!

I've also had one and liked the TAB SET feature the best. I liked
being able to set the TAB for just the novice band and as I tuned
the radio, it would beep on the limits and didn't allow to go out of
the band. It was a great radio! I'm now a Ten-Tec Nut and wouldn't
buy anything else but Ten-Tec. Service is great and it's Made In The
USA.

I had the same problem and it will mess up your Display. Its not easy to get to but basically you have to disassemble the Radio, its up near the Display Area, once you have pretty well dismanteled Radio you will see it. I couldnt see paying Kenwoods price for Battery so I went to Radio Shack and picked up 1, it has worked for 3 Years now

Well, not exactly the poor house, but unlimited ISDN here in St. Louis
would cost about $250 a month. That's a 2B+D line ($100) and ISP
charges ($150).

> >>
> >> -- Now the receiver should be opened up as far as it will go.

This does nothing as far as opening up the RX on 800MHz
with my IC-W32A. All it does is an LCD test.

However, due to the wonderful anomalies of your typical FM
receiver design, try scanning between the legal frequencies
of 961.110 MHz and 986.10 MHz in 30 kHz steps on you IC-W32A.

Or just set the VFO as follows....

Image_Frequency = Freq_Of_Interest + (1st_IF_Freq * 2)

So for the IC-W32A UHF (including 800MHz) side...

Image_Frequency = Freq_Of_Interest + 92.1 MHz

So say you wanted to listen to a really cool 800 MHz trunked
control channel on 865.125 MHz. While you would hear the
signal just fine on 865.125 MHz, the same signal can also
be heard booming in at full intensity on 865.125 + 92.1 or 957.225 MHz.

Aint' double conversion grand?? ;-)))

> sensitivity go down if their switched? Or do they just mean selecting a
> band (using the band button) other than what was set for that side?
> Understand??? Cause I don't

My guess is that the ability to switch the display around is strictly
a user interface feature and has nothing to do with a given preferred
default VFO being on one side of the display or the other.

Say you switch around the default configuration so the VHF VFO is
on the LEFT and the UHF VFO is on the RIGHT. This can be confirmed
by enabling the LEFT side and going to VFO mode...then press the BAND
key to cycle through the band options. Notice that the aircraft band
appears
on the LEFT side VFO. Doing the same thing on the RIGHT side reveals the
800MHz band but NOT the aircraft band. Therefor VHF is now what the spec
sheet refers to as the "original band" for the LEFT side, and UHF is the
"original band" for the RIGHT.

Now I would suspect that in the above configuration the LEFT side would
operate
with .32 uV sensitivity while receiving on, say, 446 MHz, and the RIGHT
side
would operate with .32 uV sensitivity while receiving on, say, 146.52 MHz.
This is because each side is using it's VFO on a band which was not
the primary band targeted by the receiver design.

But each side would return to .16 uV sensitivity while receiving it's
"Original Band". At least that is how I interpret this. I have not yet
verified this using test equipment.

Since we have two independent VFOs/receivers, we can expect that the
circuit designers had the option to optimize a single receiver to perform
better on one band vs the other. Rather than providing you with two
identical designs that perform equally well (or poorly) on all bands.
What you have is VHF VFO that prefers VHF and a UHF VFO that
prefers UHF. The display toggling doo-dad is just a user interface

feature. I doubt it affects the RF receive.

Clear as mud?

My TM241A display went crazy. Turned out to be the connector between
the display and radio. This connector looks like a weak link in
this radio. I jumpered across the surface mount connector with
26 gauge single strand wirewrap wire. Very difficult, but works now.

Not really. I've been following the subject pretty closely, and, while
the cites you provided are certainly used in regards to "traditional"
fax machines, they have not yet been successfully used in a situation where
a consumer received junk mail from an e-mail spammer. The few cases in which
it has been tried, the strategy failed.

The cases where spammers have been sued sucessfully have been typically
using "Denial of Service" and "Dilution of trademark" complaints.

If you have any verifiable cites to the contrary I'd love to hear about
them.

I have for sale an AEA PK-96 9600/1200 Baud TNC. This TNC contains
AX.25 levels 1&2, Host and KISS modes, an 18K mailbox, Node operations,
true DCD state machine for open squelch operation, and many other
options.

Real good TNC. I used it for a good while running a personal BBS
without
problem.

2110. Sick FT 8500

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-21 00:00:00 UTC
From: John Perri <jperri@interserv.com>
Message-ID: <34EEEFEC.9E793516@interserv.com>
Source record: 152817

After a year of good service my FT 8500 is not well . The sensitivity and squlech are gone on the VHF side. I have been able to do some limited trouble shooting with that #$%& schematic provide and have found the the V-Noise is missing when in band .140 and up. Aircraft works fine. Need ideas and most of all a guide to the location of all those tiny parts, diodes and such.

Any help would be appreciated

Got a Email from a contact at Yaesu UK (England). He said the British
version will also put out 10 watts all mode for the British 70 MHZ band.
They did this at the last moment to "FINISH OFF" the Competion.
I think the FT-847 has a software mod just like the FT-920 and that is
how this is possible.

You have a point there Bill,
> I prefer the British term "valves" myself. It's really
> more accurate than "tube" or "pipe."
I believe 'Thermionic valve' is the correct term.

PS. The amp is on it's way to #12 for evaluation/modification if necessary. One's concerned about the bias circuit and whether it's properly regulated and also how bad the flat topping of the negative peaks are!
If I'm going to sell a 1kw output amp on the UK market I want it to be a 'sweet' one so I'm willing to wait while the basic design gets fully sorted.

I'll report back on all this.

Regards

Phil / UK

2121. Kenwood TMV-7A Mod Problem???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-21 00:00:00 UTC
From: Swtempo@worldnet.att.net
Message-ID: <6cnelb$fu6@bgtnsc02.worldnet.att.net>
Source record: 152828

I performed the "beyond mars" mod to my TMV-7A and the radio still performs like the mod wasn't done.
I have done the full reset to my radio with both the reset button behind the face plate and by holding MR while turning the radio on. The radio still operates as though the mod wasn't done. I even took a magnifying glass and looked closely at where the resistor was removed to be sure the area was clean and no solder splashed to make a bad contact somewhere. Everything was very clean and just fine.
Just to be sure, I removed the chip resistor that had the number "0" right below it. The only other chip that was there had a number "1" below it. I did not remove that one, just the chip next to the number "0". The green jumper wires that the Kenwood supplement talked about are still intact. They were never touched.
I do remember that I did not reset the radio right after performing the mod, and that I started using the radio and programming some of the memory features and things like that. After realizing that the radio would not go below 410 mhz, I did a full reset of the radio to see if that would make the mod work. It did not. I've tried resetting the radio many times and still it performs as though the mod wasn't done.
I don't know what else I can do. I've double checked the work and reset the radio many times. I even put the chip resistor back into the radio, did a full reset, programmed some features and used the radio normally. Then I started all over again and removed the chip and did a full reset before doing anything else. It still did not work.

What I'm curious about is what the UK third-party traffic rules have to say about this. This sort of use is clearly beyond the scope of "transmissions of a technical nature whose importance does not justify the use of the public telecommunications infrastructure" (paraphrase of the Canadian regulations). What you propose would certainly be illegal in Canada.

Personally, I feel it's not even worth talking about. The Yaesu is the only one worth considering, unless you want absolute simplicity while sacrificing fine, top end receiver performance.

Used equipment is the way to go for the new ham on a budget.
The best used rig for the money (IMHO) is the IC-735. At about
$600 street price, it is a very good deal, and its performance
remains competitive with the current crop of HF transceivers.
There are a number of other great rigs on the used market at 50%
or less of the price of new rigs. For that size savings, it is worthwhile
to spend some time learning about them, and learning how to shop
for them.

Used equipment generally doesn't have a warranty, unless you
buy it though a dealer who offers one. But the purpose of a warranty
is to catch infant mortality problems in new equipment. Once the
radio has operated for a year or so, any problems a warranty is
designed to address are very likely to have already appeared and
been resolved. So you can feel pretty confident that the radio is Ok
if it is operating properly after that period.

(Just as it is not a good idea to buy a new car the first model year,
it generally isn't a good idea to buy a radio that's only been on the
market for a short time. The bugs probably haven't been worked
out yet. Look for radios with high serial numbers in radio models
with a good long service history. That's one reason the IC-735 is
so attractive, it had the longest production run of any amateur radio
ever. They got it right the first time.)

Aging problems don't become an issue until the radio has been in service for well over a decade. (With today's components, that may stretch to well over two decades.) It isn't like the old days when paper capacitors were used. Unlike tubes, transistors don't deteriorate with operating hours to any significant degree. Mechanical problems with switches and pots are generally a factor of use rather than age. It is pretty easy to spot a radio that has seen a lot of rough use. You'll probably want to avoid those, or offer less money.

Remember this. Most amateurs trade radios, not because the old one is worn out or giving trouble, but because they just want a shiny new toy. Typically, there will be nothing at all wrong with the older radio. Fear of lemons should only apply to new models being released into the amateur market. Buying a used radio with a good established reputation is really a very safe purchase. (But try to avoid buying sight unseen. Try it out first if you can. Seeing a radio work makes it worth more than something you buy blind.)

There is one word for HF antennas, *wire*. It is available at any electrical supply house very inexpensively. There is no need to buy overpriced collections of aluminum tubing in order to have a highly effective HF antenna system. It will be well worth your time to learn how to erect effective wire antennas.

Unless you are willing to lay down an *extensive* radial system, ignore vertical antennas for HF. Despite manufacturer's hype, there is no such thing as a ground independent HF vertical, and they do *not* operate efficiently or effectively without an elaborate radial ground system. (Physics will not be denied, no matter how large the antenna maker's advertising budget.)

(But note that even a bedspring can make contacts. Practically anything will radiate, it is how *well* it radiates that matters. Lots of amateurs will tell you how great their pile of aluminum tubing is, and really believe it because they have no good way to compare it to a really effective antenna.)

Also avoid excessively shortened antennas of any sort. They will have very low efficiency. Radiation is a function of the product of charge accelerated over a linear distance. In other words, current times distance. If you shorten an antenna from its self-resonant length, you have to pump lots more current into it to get the same amount of radiation. In other words, the radiation resistance of the antenna becomes smaller.

Antenna efficiency is the ratio

EFF = 100* Rrad/(Rloss+Rrad)

Rloss is fairly fixed in terms of copper loss, and in terms of ground losses. Power lost in Rloss is a function of I^2 * R, so more current means exponentially more loss. Thus you want to maximize Rrad while minimizing Rloss to get best efficiency. The way to do that is to maximize antenna size (up to the self-resonant length). And you

want to get it as far from Earth as possible, and avoid antennas which depend on Earth for a counterpoise because Earth has high I^2 * R losses.

In general, that leaves you with a high mounted horizontal doublet as the best antenna for the money on HF. At the going price for #12 wire, that sort of antenna costs you under $10 for any HF band.

There can be compelling benefits to yagis and quads on upper HF, but again, Tube Sales in your town has aluminum tubing for much less than the amateur antenna vendors, and quads are just wire with some bends in it. Build your own for economy. Don't waste hundreds on what you can build for tens.

It needn't be expensive to have a good HF station. Teenagers in the Great Depression did it. Just use your head instead of your VISA card and you'll do all right.

Buy the transceiver. It'll have a better receiving section than most
SWL receivers, and it'll give you an incentive to study harder to
pass the exam. There are a number of good used radios available.
My favorite is the IC-735, but a number of Kenwood and Yaesu
rigs are good too. If you shop intelligently, you can always resell
it later without taking much of a loss if you don't like it. (That's
one of the big attractions of buying used, most of the depreciation
was suffered by the poor soul who bought it new.)

> 73 de Eric KB9QAI NotMe@add-inc.com

There aren't any mechanical filters available for the IC-706 series, so
that's a moot point. There are narrow SSB and CW crystal filters available
for it. IMHO the 500 Hz filter is a must have. I don't see much benefit to
the narrower SSB filter, heavy SSB operators might.

You want the filter even if you have DSP because the filter is up at the front
of the radio where it protects the bulk of the radio from overload and AGC
pumping. The DSP is at audio, so it doesn't. Also, it is my understanding that
the optional DSP unit for the IC-706 Mk II is only a noise reduction and
hetrodyne notcher. It isn't a narrow brick wall filter. Most external DSP
filters *do* offer narrow brick wall filtering, so buying one of them may well
be a better purchase than buying the optional Icom board.

Like the title says.

So far have come up with several folks with the receiver,
but lots of receivers without the module.

If you have parts, I just need one of the switches from the
module. A very nonstandard switch, I'm afraid.

A whole module would be even better.

TIA

Please reply via email, as this news server is spotty

Hi All:

Posting this for someone without internet access.

We have an Alinco DR-599 Mobile Rig 2m/70cm, 50watts/35watts with three power settings on each band. Radio is in excellent condition. Comes with manual and original packaging. Price is $400 or best offer. Price covers shipping via UPS.

The Dualband HT is a Yaesu FT-50R, one year old, with out-of-band mod done for receive. Comes with a ton of accessories, including extra High Power battery, drop-in charger, ext. Yaesu mic and cig. lighter adapter, to name a few. Price for the whole deal is $400 and will be shipped with manual, original packaging and a protective carry case.

Please email with questions or to make arrangements. No other warranties, implied or written accompany either of these items and they are offered in "as-is" condition.

7-3,

Just to follow up on my previous post:

Thanks for all your emails and I think I need to make a couple of clarifications:

(1) WM7D maintains a very detailed journal regarding to his FT-920. His URL is http://www.rdatasys.com or http://www.wm7d.net/

(2) Many people asked me about what I meant by Mode A and Mode B keying. Here is what I mean by it:

There are 2 ways of using the Iambic Paddles, namely Iambic A and Iambic B.

The Iambic modes work when you squeeze both paddles together. In Iambic B mode the keyer plays the alternating element after the paddles are released during an element. Iambic A mode does not produce an alternating element when the paddles are released during an element. For example, a release during the dash in ".-" produces ".-" or "A" in Iambic A mode but produces ".-." or "R" in Iambic B mode.

I think my iambic timing comes naturally in Iambic A. I can never make a correct "A" or a correct "N" in Iambic B. Likewise, I'll send the letter "K" when I send the letter "N" in Iambic B. I tried to change my own timing but failed miserably. In other words, I am stuck.

In the situation of my FT-920. Iambic B operators will not see any problem at all. If an Iambic B operator doesn't know he is mode B and never heard of Mode differences, he will probably think that I am crazy. Please trust me, it won't take long before an Iambic A coder finds out the keyer is set in Mode B.

Menu item #U-20 on the FT-920 offers some flexibility in paddle operating modes. But none helps with my situation:

EL1 -- Iambic keying with automatic character spacing disabled. This is the default and is in Mode B.

BUG -- Mechanical "But" key emulation. The "dot" paddle contact produces automatically-generated dots, while the "dash" contact produces dashes of a length produces manually.

EL2 -- Iambic keying with automatic character spacing enabled. This selection is best when programming message memories.

EL2 is not helping matter neither. It's still in Mode B, but the character spacing is enabled.

I'm going to call YAESU Monday to see if there is a way out of it.

Best 73!

Automate your collecting research!

News Rover is the ideal tool for searching through Usenet newsgroups for messages about items that you collect. Once you tell it what to look for, News Rover will scan a set of newsgroups and collect all messages that contain what you are searching for. For example, if you are interested in messages related to slide rules or calculators, you could specify a search expression such as:

slide rule or calculator

News Rover will then scan a set of newsgroups you select and collect any messages that match the search expression. This searching is completely automatic, so it works while you sleep, work, or play. The search expressions can be as simple as a single word, or they can be complex expressions with AND, OR, NEAR, and NOT operators.

You can download a free demonstration copy of News Rover from:

http://www.NewsRover.com

But News Rover is good for more than just searching collectables newsgroups. You can use it to search for family names in genealogy newsgroups, or for any other type of information in any newsgroups you choose. And News Rover is ideal for picture newsgroups. It decodes both UUencoded and MIME base64 images, and it combines and reconstructs binary files that are split into multiple messages.

Here are some of the key features of News Rover:

o Scans newsgroups you specify while you sleep, work, and play.

o Automatically downloads messages and attached files so that they are available for instant access when you are ready to review them.

o Decodes attached files of all types (UUencoded and MIME base64).

o Displays a picture gallery of collected thumbnail size images.

o Selects messages based on include and/or exclude criteria to help you find a needle in a haystack and eliminate spam. You can even use complex selection expressions with AND, OR, NEAR and NOT.

o Supports multiple "interest groups," each with sets of newsgroups, selection expressions, message database, and picture gallery.

o Remembers files already extracted and eliminates duplicates automatically.

o Saves parts of multi-part files, searches for the missing parts, and rebuilds the entire file when the last part arrives. It even combines parts found on different days and in different newsgroups.

o Allows you to post Usenet messages and send e-mail messages.

o Allows you to block all future messages from specified senders.

o Operates on a schedule you set up to use your phone line only when you don't need it.

o Automatically dials the provider and hangs up the phone when it is finished.

o Works with almost all Internet providers and news servers.

o News Rover is multi-threaded so you can read messages and view pictures while it downloads and decodes more messages.

News Rover was designed and written by real-life Usnet newsgroup junkies! With News Rover the news is ready when you are!

To learn more and download your free demonstration copy, visit:

http://www.NewsRover.com

News Rover is getting rave reviews...

D.G. says: I downloaded News Rover last night... I ordered this morning. I don't know how much time I saved. I give your product two thumbs up!!!

T.B. says: "Great Job!!! I tried your software for the first time today, and it beats Plukit-32 hands down!!

Fran,
Don't go hog wild and buy a high dollar ham Rig.you may find that
you do not like ham radio.
I would buy a shortwave rec. for
under $200.00 bucks and listen for awhile.if you don't like ham.
you can listen to the other bands.
and you want have to waste your time
taking the test.Smoke on it a while!
most hams in my area want your equipment for dirt price.most will
not give you a fair shake!
If you like to fuss and fight then
ham radio is for you!ham is high-tech. C.B. good luck!Big Al

I have a Kenwood TH-79A for sale. I comes with the following:

6v, 9.6v and AAA battery pack. Original wall charger. KSC-14Kenwood rapid , dual slot, charger. Original antenna and aftermarket antenna. Speaker mic. Packet connector. Protective case. Original boxes and manuals.

This HT is in good shape (no major gouges or scratches). Used by me (a non smoker) since I have had the rig. The display is in great shape as well.

$200.00 I wll ship

I would be willing to trade this HT for a Pro-2004

Thanks,

Body handling: Binary attachment payload not displayed: vcard.vcf

Hello to everybody.
I want to give you some details about the prices in Europe. I saw some mails about the competition of new YAESU transceivers. You must know:
In european countries it is usual to put the enduser price including the local VAT!
In Germany you have 15 % VAT (from April 1st = 16%) VAT always included.
In the UK you have i.e. 17,5 % included.
It is law that you must quote prices for endusers including the VAT. If you offer to a company or expot you can offer net price.
To sell in the shop to a foreign visitor is most time a big problem, because the customer has to pay the local VAT and has to bring / mail back the documents after customs declaration. After all this the shop can refund the VAT ammount.
Most simple way is the mail order and shipment into foreign country. The prices can be quoted in German mark or if better also in foreign currency like US $.
The VAT will not be charged, the export price does not include the VAT, but destination must be outside of EEC countries.
If you have an APO, it will be same.
If you have any questions, please do not hesitate to come back.
Best wishes

Hi all,
I have a Saber 1, Model H44QXN7139AN. It is 12 channel, high power, with securenet module installed. However, this unit is currently on 418Mhz, and I need one for the 440 ham band. I also have a NTN 4593A high-cap battery with it. I am looking to trade for another Saber 1 in the ham band, or another COMMERCIAL ht that will work in the 440 band. Securenet is not required. Thanks in advance, please reply via e-mail. This unit is an 8 on a scale of 10. It has just a few scratches on the case.

Sorry, but it didn't work for me. Note : I have a TM-V7(E) for Europe,
and both the '0' and the '1' resistor was already removed when I
opened the radio. I have and have always had full RX-range (including
800 - 900 MhZ, but I still only have 144.000 - 146.000 VHF TX-range.
I tried resetting the radio, but all I got from that was an erased
memory. By still worth the try.

Any ideas?

TIA

Check the small connector to the display. Spray some switch cleaner on it
and connect and disconnect it a few times. Worked for me.....
I don't think it is your battery.

2183. Re: Yaesu Memorizer owners (HELP!)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-22 00:00:00 UTC
From: "Christopher (Chris) W. Boone" <cboone@earthlink.net>
Message-ID: <34F083CE.3BE496B6@earthlink.net>
Source record: 152646

If it is a 227R and not an RA or RB, there is only one memory..
it does not have batteries and if you remove the power from the
radio, it WILL lose the memory...keeping the power applied
BUT turning the radio OFF is ok....the power is still applied to
the memory ckts..

As for the trouble you are having, the OFFSET switch gets dirty
after a while and if it is not making good contact, the PLL
will not be able to lock properly. The OFFSET xtal ckt MUST be
working for the radio to lock up on channel...even in simplex mode.

Clean the switch with QUALITY spray....(Quietrol or similar)..that
leaves NO residue and is SAFE for plastics!!!
Work the switch back and forth to get it clean....

Also check the relay in the unit that switches 8V buss...and the
regulator itself (mounted to chassis at right
rear corner upper side)...the solder connections there can break
and cause intermittant problems...
I still have my 227R from 1977 ! Still working...

To store a freq in memory, set dial to the freq you want to store..
then press in the Yellow "M" button....its now stored...
to recall, press the Green "MR" button in..pressing the Yellow button
again will store a new freq...
to operate an odd spilt, store the TX freq you need and then dial
up the RCV freq....then set offset knob to MEM....
this will cause you to rcv on the dial and TX on memory!

Chris

> after all.
>

If you want to lease a T1, ISDN or such, yes. However, in California, I pay Pacific Bell $16 a month for my line. That includes unlimited free local calling. Any LD charges are done through any choice of carriers, such as MCI, ATT, Sprint, etc. We choose our own LD carrier, and now it is commonplace to choose your own local carrier. Rates are extremetly competitive.

However, for home-telephone service, US$16 a month is not a bad deal, especially considering I racked up 110 hours of internet connect time last month.

> There is no such thing as a free lunch.

True, but our phone service here is close to it. Rates for business/commercial on the other hand are priced very differently.

It's already happening... the 47GHz part of the spectrum, later this
year, may see the first evidence of this. The amateur band up there is
in real danger if the commercial people "run out of space"...

I have a very nice Scout model 555. It is only about 5 months old with very
few hours on it. I bought it as a backup rig for the shack and to use for
the kids Scouting weekends and the Jamboree on the Air/Guides on the Air

(the Girl Scout equivalent.) I have the following options: band modules for
20, 30 and 40M; model 701 hand mic, model 297 NB (an internal option),
model 296 Mobile bracket and a 12V fan added to the heat sink to help
prevent finals from getting too warm. I will even throw in a 12V battery or
two to run it off of. If bought new and essentially is new, would cost $694
I will sell the whole thing for $500 including shipping.

Almost forgot to tell you, the only reason for selling is the local amateur club
has donated some radio equipment and I can now use the money for my new
Contesting rig.

>Now I wonder who'll be the first to bring out a truly mobile HF set with
>real IF DSP!

Good point, Phil. However, the 940 filters are 2.7 KHz wide, and the extra 300 Hz makes a very large difference in SSB audio to my ear. The little 570 has the stock 2.4 KHz Kenwood filter (and only one filter) ahead of the DSP, so you can't hear any more than 2.4 wide, though a friend of mine put in the YK-88S1 at 2.7 and he has nicer audio, both receive and transmit. If I had the 570, I would probably do that, too, or maybe cascade a pair of 2.7 filters to get a little better rejection of QRM crud on 40 meters, where I like to operate!

I'm curious if anyone has had any experience using or has purchased the Relm handheld scanner with the CTCSS/DCS capabilities? It looks like a good unit at the price and seems to be the only handheld with PL. Regency has always been a good company, I just want to be sure Relm has followed with their recent units. Any information would be greatly appreicated, thanks in advance.

It has everything to do with all aspects of amateur radio. One individual with a bruised ego has decided that amateur radio no longer serves what he considers his agenda/purpose/deranged ideals. There is always someone out there with an equally warped sense, or lack of, purpose in a position to make things happen. Burt cares only for himself. He's proved that time and time again. As with a puppy that messes off the paper, the time has come to rub Fisher's nose in it and not only call his bet, but to raise the stakes as well.

If you're not interested, by all means, use the killfile/delete feature of your newsreader.

Why wouldn't be a mobile rig. Its the same size as the Icom 735 which
was sold as a mobile rig for many years until it was discontinued a
couple of years ago. About the only ones who couldn't use this as a
mobile would be the sports car drivers. But, then, who wants a big
hf antenna on their Corvette or Trans-Am any way. [Forgive me, I am
partial to GM ;-)] While rigs have gotten smaller, the laws of physics
have prevented us from making efficient antennas much smaller.

After they've had a year to work out the bugs, I intend to buy an
FT-847. And, yes, I will run it mobile as well as in the house.

2220. HELP!! HAL ST-6000 in RS-232 mode

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-22 00:00:00 UTC
From: nx7u@primenet.com
Message-ID: <34f0f033.101608174@news.primenet.com>
Source record: 152683

I recently obtained a fine HAL ST-6000 RTTY demodulator locally. I intend to replace my patchwork-quilt-semi-homebrew Kantronics Interface][(remember those?) with it. Right now the kludge works with a PC running BMKMULTY.

FWIW, the Kantronics is TTL, so part of the kludge is a homebrew TTL-RS232 converter. It's worked very well for several years.

Well, I hook up the HAL, carefully following the special instructions for RS232 operation (jumper the accessory connector, add shorting plugs to Loop1&2 and Loop3), but...no workee. Pull out the RS232 das-blinkenlights-analyzer, and bipolar data is indeed coming out of the correct pin, etc. Reversing polarity still no workee.

So I pull out the osillyscope, and look at the RS232 output of the Kantronics kludge. Looks good, 22ms signalling at +/- 15V just like the handbook promises. Now for the HAL...

There's this "puncture" voltage pulse train on the RS232 data...about every 9-10ms the polarity reverses for maybe 2ms...so it looks like someone superimposed almost a timing pulse on top of the Baudot data...it's close to twice a Baudot symbol but the scope is free-triggering so it's hard to tell for sure.

Unfortunately I don't speak "Green-key-style" RTTY too well, so it's difficult for me to decypher much of the HAL documentation.

So...any suggestions? Has anyone out there successfully interfaced an ST-6000 with a simple PC/RS232 interface (there must be hundreds!!)? Any hints? PS the MIL-xxx pins have the same disease.

Thanks Much In Advance!!!!

I am a bit shocked to hear anything negative said about Clif at AVVID.
He has answered many of my questions which I asked on the newsgroups. He
has also answered many questions on private E-mail. He asked nothing in
return, although I know it took much of his time.

Also, I have had a number of friends praise his work. He does
outstanding maintenance at a very affordable price.

Usual disclaimer...

I, for one, consider him top-notch!

2230. Yaesu FT-920 Mod Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-22 00:00:00 UTC
From: Milton Krain <milt@monmouth.com>
Message-ID: <01bd3f43$c4db3160$2af6face@6648hvy6e066>
Source record: 152725

Hi,

Yaesu has a modification for an FT-920 that has low average
talking power output on sidband. The expected results of
the modification is improvement of average talking power.

The modification procedures consists of adding and/or
replacing several resistors and capacitors on the DSP board.
It is documented by Yaesu in File No. TSN-9743, Trouble Shooters
Note.

How can I tell if my FT-920 needs this modification?

FS/FT: Butternut HF6V Vertical

I have a very nice Butternut HF6V vertical antenna with STR-II radials kit for sale. Excellent antenna.

The antenna was purchased in 95, used for just over a year, and been in storage since. Extremely clean, almost like new. Complete with all hardware and documentation.

Work all 6 most popular bands 80 meters thru 10 meters with a single, highly efficient vertical radiator only 26 feet tall. Optional adapters may be purchased for 160 meters, 6 meters, and 17/12 meters.

Visit (http://www.bencher.com/antennas.html) for more info and specifications.

AES price is $285.90 ($219.95 for the antenna and $65.95 for the radials kit). I want just $150 + shipping, for the whole thing.

From: Saad Mahaini <Saad.Mahaini@mci.com>
Message-ID: <34EFB00A.1DEA@mci.com>
Source record: 152733

FS/FT: Commercial 5GHz Digital Microwave radios

I have nice pair of commercial spread spectrum digital microwave radios.
They are made by CYLINK, model FT1, with the following major specs:

Frequency 5.725 to 5.850 GHz (cover ham band)
Freq step 5 to 10 MHz
System Gain 110 dB
Tx Output power 30.5 dBm Min
Rx Noise Figure 5.5 dB Max
RF interface N Connector
Voltage 110 V
Dimensions 5.25 x 17 x 15 in
Weight 39 lb.

These were pulled from service, only few years old, in excellent
shape, with manual.

Use for a commercial microwave link project, or for ham use
on the 5.650 - 5.925 GHz ham band.

These new sell for over $8K each, will sell or trade to best
reasonable offer.

Message-ID: <01bd3f76$9d8d0ec0$af014999@user>
Source record: 152739

Franki,
For the money you quote, I don't think it would be a good idea to get a receiver then sell it & get a transceiver. Just buy a transceiver and don't transmit.
I personally don't overly like the TS440s. This impression comes from the one my friend has - it has the noisiest receiver I have ever heard! (There are internally generated modulated noises all over most bands even with the antenna connected.) He has had it from new and should have had it checked out, but never bothered, so my impression could be totally false.
Personally I would get an IC735, expect to pay 450 to 500 pounds.
However, this doesn't leave you much money left if you want to buy an antenna or ATU.

Decide what money you will need for things other than the radio, then see what you have left over - this should help narrow down even further what Transceivers you can afford!

2250. WHY K1OIK IS NOT A VE

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-22 00:00:00 UTC
From: kf2ti@planet.net
Message-ID: <MPG.f59e0dfeb71e87f98996e@news.planet.net>
Source record: 152745
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

When this thread had it's first go around last year (Burt does love to recycle his compost), by his own admission, he never once administered a VE session during the last 12 month period thus the VEC has, at its discretion, the powers to non-renew a VE's credentials. According to the booklet, Burt failed in his performance as a VE and therefore his credentials were revoked. What this all boils down to is sour grapes

Burt's use of threats is consistent to his personality. He is also currently harassing the people of Packard Bell for failing o provide him with free customer service on a computer that (1) is 2 years old and (2) he admitted damaging in trying to install a piece of hardware.

What amazes me is that he threatens to cause great fiscal harm to the company unless they comply with his demands on the basis of his side job of selling computers. IMNSHO, if this person really were a skilled salesman of computers and a genuine teacher of electronics, you'd think he'd be able to diagnose the problem and fix it. Alas, this is probably not the case as this is not the first post that Burt has made when something electronic has failed and he has no clue as to the problem.

His use of threats unless he gets his way smacks of the little kid who throws temper tantrums and stomps his feet. His constant referral to the nazis' and of Germany are truly amazing as he himself has used their tactics to foist his opinions on others.

His constant haranguing of amateurs as gutless is unfounded. Burt is like one of those annoying little dogs that yip at everything that comes close yet will never leave its own yard. When challenged, Burt has always come up with reason after reason as why we refuses to meet face to face on neutral terms. One of his best was when, invited to meet at a Boston area computer show (which he loves to attend) he DEMANDED 25 cents per mile plus expenses.

When asked to actually come on the air, he picks frequencies that are unusable, usually 40 meters at night. To his credit he then asks YOU to pick the frequency. So far, every frequency has too many problems...no propagation on 10 meters, no 20 meters because we're too close, 80 meters is too noisy, he has no antennas for the WARC bands...and on and on.

Like everything this too shall pass, but until then I suspect an endless stream of recycled compost...funny the first 1/2 dozen times, tedious the next.

Oh well. I too will counter with editorials should Burt's appear. I will submit posts from the newsgroups such as ASD to show discredit

whatever he submits. Such is his right, such is mine.

I took the time to read Fisher's vitriolic little webpage and have confirmed what I always thought, the man is definitely not playing with a full deck.

Yes, his credentials were not renewed. He was not fired as he states. He, from the outset, trys to throw his "weight" around by threatening to go and "cry" to the FCC. you must restore FORTHWITH he states....and then..states he is being discriminated against.

The ARRL response cites factors as to non renewal and the very 1st reason is exactly why this started. By Fisher's own admission, he has not administered a VE session in the specified timeframe. According to Part 97.525

No VEC may accredit a person as a VE if the person does not meet minimum VE statutory qualifications or minimum qualifications as prescribed by this part

Burt's response is then to argue that he was "fired" for no apparent reason, yet he conveniently forgets that in another paragraph her mentions that there were others that supposedly have failed to meet the minimum qualification. In fact, this is the paragraph where he does admit his failure by lying..I quote

Further, I know several VE's that have never been active in giving a test (as I have) that have not lost their status as a VE examiner"

If you'll remember the 1st go around, Fisher admitted to not having given a test in over a year, so he is blatantly (1) lying about and (2) attempting his little boy tantrums but crying that "other guys were doing it tooooo!!!"

Fisher then continues his tirade with threats to write his Congressman concerning amateur spectrum. In fact he is really threatening to stoop to blackmail to get his VE status restored.. I quote " I suggest you do not motivate me to do as I might wish. I am willing to let sleeping dogs lie, just restore my VE status.

If you do so, this matter ends, quietly. If not, neither of us can be sure what is at the end of the road."

What is also very interesting is now Fisher claims to be a member of a minority. My question is exactly what minority is that?? Obvious he's not black, Latino, Asian, most definitely he's not a woman, although he has a tendency to cry and whine like some. In fact, he claims

discrimination on this basis. He further claims to have done quite well on Wall Street and therefore will bring his considerable financial might to bear with legal action.

Words speak very loudly here and the words from Fisher show a total lack of any sanity. Normally I don't promote websites but this you have to see. A man reduced to fabrications and outright lies to massage an obvious bruised ego.

I can see why the people of Packard Bell are paying him no mind as well.

Get the full story on Burt Fisher..check out Dejanews to see just what type of man is teaching children in Cape Cod schools

2253. TS-570d CW lockup problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-22 00:00:00 UTC
From: Tony Lyon <kj5xf@worldnet.att.net>
Message-ID: <6cpa3f$opa@bgtnsc02.worldnet.att.net>
Source record: 152748

Greetings,
I wanted to share a continuing problem that I have had
with my Kenwood TS-570D, that is VERY frustrating if you
are a CW operator. The problem is associated with the
transmitter locking up during CW operation. Here are
the typical symptoms:

a) Transmitter will randomly lock up during CW transmit.
To "unlock" it, you have to tap the key.
b) It happens while using either an internal or external
keyer.
c) It happens at any power level between 5 and 100 watts.
d) It happens at any CW speed between 5wpm and 30wpm.

At first I thought it might be RF feedback related. So,
I checked the ground, SWR, etc. I also put toroids on
the power cable, keyer cable, etc. But, that didn't
change it at all....

I had a QSO recently with a ham who has seen the
EXACT same problem. I also have received emails from
hams describing the EXACT problem. So, this is NOT
an isolated problem.

If you are seeing this problem, I'd suggest that you
contact Kenwood and ask them what they are planning
on doing about it. Kenwood still thinks that
it is an "isolated" case.....

73,
Tony Lyon (KJ5XF)

P.S. I should have kept my TS-430..... :-(

From: ham@cybercomm.net
Message-ID: <34f02f4b.812948@news.cybercomm.net>
Source record: 152750

Just picked up an old memorizer. I think the model is FT227R.
It works, but a bit screwed up.
Sometimes it powers on at 2.000, sometimes it just has
three digits. After messing with it for a while, I can get it to
show the correct frequency.
Anyway, that problem seems to be hopeless but can someone tell
me how to operate the memory?
Does it store the memory when turned off? There doesn't seem to
be a battery in it.
Could you email me with any suggestions or input you may have?
...Thanks...Dave

Thank you for your comments.
I have met people like Burt, in my short 49 years of life and 33 years as an amateur. They really get me, you, going, but, when I find that they have little to back themselves up, I then reanalyze what I am doing and settle back..... It isn't worth arguing with them.
Thanks again.

I own a 706, and I must agree. It is in a different class from the
FT767GX. The latter has a much more robust receiver. OTOH,
the 706 has 6m and 2m, and is *tiny*. But that's only of real
interest if you're going to operate mobile. For fixed station use,
the Yaesu is the better deal at the same price.

But in most of the US it is a long distance call to an ISP. Only the large
metro areas have a local call.

> how this is possible.
> Steve NS1R

There is a rumer the FT-847 price will be $1350 USA Street price and
this radio is repacing the FT-900CAT. I wish this was true but I have a
couple of questions. First, the FT-920 list price is Japan is 198,000
YEN and the radio costs about $1650 USA dollars (including coupons).
SO if the FT-847 list price is 210,000 Yen then one would figure the
radio to cost more than the FT-920. The price of $1700-$1800 sounds
about right. I HOPE I AM WRONG AND THE GUY WHO SAID HE WAS AT THE HAM
STORE IN JAPAN AND THE STREET PRICE WAS $1350 USA WAS CORRECT !!!

2265. Yaesu FT-301 Mods and FS

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-22 00:00:00 UTC
From: Jim Labrecque <jalab@lightlink.com>
Message-ID: <34F04C49.AFD5D212@lightlink.com>
Source record: 152760

Hi-

Does anyone know of a source of mods for the Yaesu FT-301 Transceiver? In
particuliar, I am looking to improve RF front end on receive and the audio response
on AM receive (seems very bassy).

For the latter, I have tried tweaking the coupling capacitor values between stages,
replacing the output caps in the audio amplifier, etc. with some improvement, but
not a lot. I have been trying to find an archive of the older Fox Tango lists but
have not been successful.

Also, I have a Heathkit HK232MBX TNC. This was Heath's version of the popular AEA PK232. It is assembled, functioning and in good condition. I
have all the manuals, cables, etc. I'd like $100 plus shipping.

Thanks,

Jim, KC1RM

Source record: 152764

Yeah, Pete .. the lack of an internal AT is a big negative for me. That will mean buying an optional ext AT, if they have one, and more $$$ and space.

My initial enthusiasm is considerably dampened. Already have HF (TS-570D, with internal AT), 6 m all-mode (TS-60, with manual tuner), 2 m all-mode (TM-255). Adding 440 all-mode and getting rid of boxes is appealing; but an external AT would be a move in the wrong (and costly) direction. Plus what I have works well for me. So.....

Audio DSP (and current IF DSP, as well) does not do the job of a crystal filter. You will want both.

If you only use the radio for SSB, you probably need not add the optional 1.9 kHz (I believe that's the BW) filter, since I think it has a wider filter built in; I have that filter and it is effective, but likley the DSP will do that job. But, with no user reports to date (I haven't seen any), who knows how good this DSP implementation is?

If you use CW you will definitely want the optional xtal filter (500 Hz?).

Phil

Yes, I agree. Is there a moderator on this NG?
If not, to whom can we go to get this type of garbage removed/filtered from the NG?

2285. HELP-What is happening??

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-22 00:00:00 UTC
From: frankl1jr1@aol.com
Message-ID: <19980222174700.MAA24045@ladder03.news.aol.com>
Source record: 152780

I have put a FS on this listing twice in the last 30 min and it disappeared both times. What am I doing wrong. It is going out 'cause someone has already replied. But it disappears from the listing. Do I have to join something?

2286. kenwood 742 and cross band repeat

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-22 00:00:00 UTC
From: Jed Barton <jbarton@ici.net>
Message-ID: <Pine.SUN.3.96.980222123756.23672A-100000@klingon>
Source record: 152781

Hey guys, i am wondering if you can help me out. I am trying to setup my cross band repeat on the kenwood 742 so that i can turn it on and off remotely. However i also can't seem to do any functions remotely except change power levels either. I pressed the remote button before activating cross band. Any help on this would be greatly appreciated. You can email directly to jbarton@ici.net. Thanks and 73 de Jed.n1jbc

2287. * FS QRP Rig, MM-3, Key all with pictures

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-22 00:00:00 UTC
From: Bill <bill@halcyon.com>
Message-ID: <01bd3fbd$709dcac0$0a203fce@bill.halcyon.com>
Source record: 152782

I am selling some of the items I am no longer using. Each item on the list below has a hot link to a picture or pictures of the item. You will have to use the back button on your browser to get back to this message.

My terms of sale are as follows:
I will not ship outside the US.
Payment should be by cashiers check or money order.
Buyer pays shipping and insurance.

You can view my high integrity rating on eBay.

You may contact me by email at bill@halcyon.com

Here are the items!

Index Laboratories QRP Plus

160-10 meter CW/SSB transceiver. This is the latest (last) version they sold. It has never been used in the field and has been used very little in my ham shack. It has a built in keyer and audio filter.

This rig runs some of the best full break-in CW I have ever found. It has a general coverage receiver.

It will come in its original box.

This is the best QRP rig ever made. The original cost was $695.00.

There is a brochure included. The manual is also there.

http://www.halcyon.com/pub/users/bill/qrp-fnt.jpg

Sale price is $525.00

MM-3 Keyer

This is one of the famous keyers from AEA. These are now collector's items. AEA has not sold them for about 3 years now. There won't be any more of these!

The keyer has more features than any I have ever used, memory, contest mode, contest simulator, serial number, paddle reverse, and much more. I have included a picture of the label on the front of the keyer that has a list of all of the functions. The keyer comes with a manual.

The link to the function label is below:

http://www.halcyon.com/pub/users/bill/mm3-lab.jpg

The front of the keyer can be viewed at:

http://www.halcyon.com/pub/users/bill/mm3-fnt.jpg

The rear of the keyer can be viewed at:

http://www.halcyon.com/pub/users/bill/mm3-rear.jpg

Sale price is $165.00

Gold Plated Hand Key?

This key was made by Wm. M. Nye Co. It is new in the box. It is one of the best looking hand keys I have ever seen. It is gold plated (see below) and has a black crinkle base.

Very few of these keys were made. This one was made for Icom to be used as a presentation item.

It has a great feel and is very smooth.

You will be proud to have this key in your shack.

I sold this key a few weeks ago and the person who purchased it did not think the key was gold plated. He felt it was polished brass. I accepted its return. I was an Icom employee and was told, when I was given the key, that it was gold plated. I can not be sure. I do not know how to tell if it is gold plate or polished brass. This time I will sell it and not represent it as positively being gold plate. I do know it looks great!

$55

I realize this thing is no Yaesu, but with my limited $$$ and the fact that conditions have improved and will continue to do so, I thought it might be better than NO 10M radio in the car. I travel quite a bit on the weekends, this will allow me to make some 10M contacts when I'm not at the base (which is a semi-cheapie RCI-2950 with which I make all sorts of National and International DX contacts BTW.) Perhaps I'll try and run an amplifier in the car too, who knows. Thanks for the comment anyway.

If I'd thought that was Walt's point I wouldn't have commented. You're
perfectly correct.

Walt, on the other hand, merely wanted to crow about supposed American
inferiorities, and as his comments showed, he doesn't appear to know what
he's talking about.

I rather doubt anyone in North America ever had 10m diameter dishes unless
they were commercial earth ground stations. Most of the C Band dishes were
more like 2 to 3 m in diameter, and most of the dbs dishes are about 65 cm
in diameter.

I bought a IC-706 before I had HF priveliges as an incentive to
upgrade.
One advantage of this radio is that you can use it for base or mobile
op. Prices are good since everyone is dumping them for the IC-706 MK11.

Thanks to everybody who replied either bt E-mail or to the news group, the majority advice was to get a Transceiver, the IC735 was mentioned quite abit. So decision is made, I'll be on the phone to hack a good deal.

Thanks again
Take Care

Hi Tom,
>Has anybody out there built a RF Electronics Skywalker Amp Kit? Anybody
>know if QST ever did a product review on one of their amps... am
>considering getting one and would like some feedback.
I built one of Lee's 8 device Skywalkers and am please with it's
performance, it really kicks ass:-)
I also have an SGC 500 watter but the Skywalker has more than double
it's output on the Bird 43 on the dash, that'll give you 3dB signal
increase alone and save you bucks in the process.
You'll burn out all the Screwdriver antennas, especially on the low
bands 160/80m so stick with good mono-banders or roll your own.
Don't forget ato upgrade your /M PSU.

Good luck

Phil G4ZOW/M

Gary OM,

How right you are! So many consumers (which is, to me, a derogatory term, meaning advertising believers, in previous times known as suckers) cannot seem to understand that higher octane gasoline does not give you more power, or more mileage, from an engine designed for lower octane. It is a physical impossibility. I first discovered this while reading a 1918 textbook on internal combustion engine design. It is interesting how very little fundamental knowledge is really NEW!

Best 73,

Don, W6JL

2313. HELP: Yaesu FL 2100B Amp

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-23 00:00:00 UTC
From: "Ronald D. Lucier" <optics3d@ix.netcom.com>
Message-ID: <34F1DEDA.14D0@ix.netcom.com>
Source record: 152497

QRO Types:

Recently acquired a Yaesu FL2100B amp from an inactive ham. Last time the amp was even turned on was about 8 or 9 years ago. Hooked it up according to the instructions and can't get it to dip. Minimum plate current I can get with 80W into it is about .35 amps, usually much higher. I only do this for a few seconds at a time naturally.

Given that I normally do not operate QRO, and admittedly have zero experience with an amp, a little help would be much appreciated.

1. Is this indicative of the 572B's being toasted? If so, any sources for good tubes at cheap prices?
2. Could the electrolytics be on their way out?
3. Anything else you could suggest would be appreciated.

The inactive ham does not want to sell the amp nor put any $$ into it. He loaned it to me basically because I have helped him in the past with numerous computer problems. Being short of funds at the moment I can't put much money into it either.

Thanks in advance for your helpful comments.

2314. Re: Icom IC-207H or triband - thoughts?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-23 00:00:00 UTC
From: Julwhan Ampeniode <exmal@fremdal.net>
Message-ID: <01bd409a$f4877060$4e9192ce@default>
Source record: 152498

To jump from the 207 to the 642 is quite a jump in price. The 207 is very, very barebones and most users seem to be trading or selling them. The 642 has the typical Ken ultra slooooow scan rate, intermod problems and the 642 in addition seems to blow the finals quite easily, which they do warn you about incidentally. In between these is quite a gamut of good rigs for your purpose, i.e. the Yaesu FT 8500, which just recently dropped its price tag by about $200. Standard 5900 is another tri bander which is oceans above the 642 in every way. Most better dual banders now have detachable face plates. The Standards, all have them , I believe.

Ralph Forsythe <ralph@hemi.com> wrote
> I was wondering if any of you use/own one of these, and if so do you like it?

>
>Did MFJ mention anything about the possibility of daisy chainning the
>MFJ-1026 to eliminate multiple noise sources?
>

Well, I have thought about this too, but I think it could be problematic. MFJ doesn't mention the possibility.

Physically, I think you could daisy chain the Main antenna path through two units. The Auxiliary (noise) antenna could not be daisy chained but would have to parallel feed the inputs on the two units, or you could use separate noise antennas.

I don't think I would worry too much about loss through the daisy chain arrangement, since the MFJ-1026 actually adds some gain with the Main antenna control cranked. I measure about 2 S units (12 dB?) on 40 meters with slightly less gain at higher frequencies. This is at the cost of some trivial noise added by the internal amplifiers. I believe I read that the ANC-4 has 6 dB loss.

The first problem with daisy chaining is that the Main antenna gain controls would interact since these gain stages are now series connected.

The second problem is that adding in the Auxiliary signal from the second box into the Main signal path would destroy the null achieved by the first box, i.e. you would reintroduce the first noise. You might be able to get it to work with two separate noise antennas that each only receive the particular noise you are trying to get rid of.

The third problem is too many knobs to twiddle!

So, I hope someone can prove me wrong or think of a better arrangement.

Anyway, back to the original David's questions. I just noticed in looking through the manual that you could use the unit with a KW linear. Just hook the box between your transceiver and your linear. I don't know how fast the relay in the MFJ unit can switch but I don't notice any significant shortening of the first CW dit (I don't have a scope to be sure).

Also, if you want to read more about how the MFJ-1026 works, MFJ has a partial manual on line at http:\\www.mfjenterprises.com.

The MFJ-1026 is definitely effective when it comes to getting rid of a single dominant local source of noise, as long as the noise antenna you are using has a good quantity of the noise to play with. Also it is a convenient box for

switching to a lower noise receiving antenna automatically when not transmitting, as I sometimes do.

Lee's amp's have always had on-going improvements from feedback from
builders.
There is plenty of negative feedback, there'd have to be with those
2879's running from 1.8-30 also induces better stability of course even
though one may lose a little of the out and out power capability of
these superb bi-polars.
I drive my 8-pill with a harris military set in the van and have a
beautiful current spec collins relay switched LP filter arrangement in
the output.
Looks ok to me on the motorola test set and analyser.

What's the problem that an up to the job homebrewer, mobile PSU and
serious antenna won't cure?

I see the same thing. I deal with a similar software to hardware relationship with my security system, and the way I always handle it is, whenever you want to make a change, do a download first from the radio, then save as the file name. This will always insure you will be working with the exact setting in the rig before changes.

Hi Group.....
Anyone going to the Dalton, GA Hamfest this weekend.......and have any
VHF/UHF equipment for sale? Especially looking for at dual band HT.
Drop me a E mail if you have something I may be interested in.
73,
John Galgano
(Proud owner of a CSCE for tech, but no call sign yet)

2328. Re: AM synchronous detection

Newsgroup: rec.radio.amateur.equipment

I have one that I built from a kit. I have used it with an FT-980 and
an FT-990. It does help. I have tried it on non-technical friend,
in-laws, etc., and they always say that the sound is less "distorted"
using the sync detector.

I got the kit from:

Steve Johnson
PO Box 3420
York, PA, 17404-0420

Message-ID: <6ct22c$4ah$1@nnrp2.dejanews.com>
Source record: 152513

Along with my TH-235, I also got the battery case, BT-10. It says in the instructions not to use commercially available NiCad batteries, but to use only alkalines. Does anyone know the reason for this?
The battery pack
that came with the radio is NiCad!
Also they state the recharge time for the
battery pack using the wall charger is 25 hours. Does anyone know how long it takes using input from a DC power supply?

There's an empty connector originally intended for a extended frequency converter. It is not shown on the schematic. If you ground pin 14, the readout will program from 0 to 999 MHz.

I hooked a 6.8K resistor from UHF1 to UHF2 on the band unit. This enables the existing front end
to run in the 905-999 frequency range.
Mine worked up to 925 before the oscillator went out of lock. I expect you could tweek the insides
of the front-end module to shift the range up to get to 950.

If you want lower frequencies, the radio is set up to tune 0-20, 20-40 and 40-60 MHz. with a 73 MHz
first IF. All you need is three VCOs, a couple of mixers and an oscillator to mix the 73 down to 10.7.
If anyone has implemented this board, I'd be interesteed in the results.

DISCLAIMER: I HAVE NO INSIDE INFORMATION. ALL THIS WAS DETERMINED FROM
REVERSE-ENGINEERING ONE UNIT. MY DESCRIPTION MAY CONTAIN ERRORS. YOUR
MILEAGE MAY VARY. PROCEED AT YOUR OWN RISK. I AM NOT RESPONSIBLE
FOR YOUR BROKEN RADIO.

Hi!

The club I'm in is interested in a 440 amp for our repeater on 444.5
The transmitter puts out 2 Watts, and we'd like to get 30-40 watts
out. 120 VAC or 12 VDC, doesn't matter. Please let me know if you
have anything that might be even close. Thanks.

2337. FS: Shure 444 Desk Microphone

Newsgroup: rec.radio.amateur.equipment
Date: 1998-02-23 00:00:00 UTC
From: "Mark S. Jennings" <markjenn@halcyon.com>
Message-ID: <6ct8mhjcn1@brokaw.wa.com>
Source record: 152521

This is a classic desk mic from the early 80's in mint condition with original shipping box. It was my favorite microphone for HF while I was on the air and worked perfectly with my Kenwood HF gear. Standard 4-pin screw-on connector with generous 6-foot cord. It is gray/silver in color with a square, heavily weighted base and large PTT switch on the base. Handsome.

This is the last piece of gear from my shack so I'm motivated to sell. Please contact me via email if interested.

I agree with W6VZV. The TS-850 at a kilobuck will, IMHO, outperform
any newer rig that sells for less than $1800. BUT most of the newer
rigs offer 6 Meters, which the -850 doesn't have.

Man, every house I see here in the states has a DBS dish. Get your
facts right.

> We are now moving rapidly towards digital TV systems here, and wide
> screen TV sets with provision for digital compatibility are already in

DTV is reality now in the top 10 markets here in the U.S. It will be in
the top 31 markets by 4Q98, and the top 70 markets by 4Q99. That's most
of the U.S. population.

You obviously haven't seen enough TV about what goes on in the states.
